

Example 4:

Finding Probability Using Area

Assume that a dart you throw will land on the 1-ft square dartboard and is equally likely to land at any point on the board. Find the probability of hitting each of the blue, yellow, and red regions. The radii of the concentric circles are 1, 2, and 3 inches, respectively.

$$P(\text{blue}) = \frac{\text{area of blue region}}{\text{area of square}} = \frac{\pi(1)^2}{12^2} = \frac{\pi}{144} \approx 0.022, \text{ or } 2.2\%$$

$$P(\text{yellow}) = \frac{\text{area of yellow region}}{\text{area of square}} = \frac{\pi(2)^2 - \pi(1)^2}{12^2} = \frac{3\pi}{144} \approx 0.065, \text{ or } 6.5\%$$

$$P(\text{red}) = \frac{\text{area of red region}}{\text{area of square}} = \frac{\pi(3)^2 - \pi(2)^2}{12^2} = \frac{5\pi}{144} \approx 0.109, \text{ or } 10.9\%$$

The probabilities of hitting the blue, yellow, and red regions are about 2.2%, 6.5%, and 10.9%, respectively.

Statistical Models for Optimizing Mineral Exploration J.G. De Geoffroy, T.K. Wignall, 2012-12-06 After the spectacular successes of the 1960 s and 1970 s the mineral exploration business is at a crossroads facing uncertain times in the decades ahead This situation requires a re thinking of the philosophy guiding mineral exploration if it is to emulate its recent performance The main argument of a previous volume titled *Designing Optimal Strategies for Mineral Exploration* published in 1985 by Plenum Publishing Corporation of New York is that a possible answer to the challenge facing mineral explorationists lies in the philosophy of optimization This new approach should help exploration staff make the best achievable use of the sophisticated and costly technology which is presently available for the detection of ore deposits The main emphasis of the present volume is placed on the mathematical and computational aspects of the optimization of mineral exploration The seven chapters making up the main body of the book are devoted to the description and application of various types of computerized geomathematical models which underpin the optimization of the mineral exploration sequence The topics covered include a the optimal selection of ore deposit types and regions of search as well as prospecting areas within the regions Chapters 2 3 4 6 b the designing of airborne and ground field programs for the optimal coverage of prospecting areas Chapters 2 3 4 c delineation and evaluation of exploration targets within prospecting areas by means of optimized models Chapter 5

The Math Teacher's Toolbox Bobson Wong, Larisa Bukalov, 2020-04-28 Math teachers will find the classroom tested lessons and strategies in this book to be accessible and easily implemented in the classroom The Teacher's Toolbox series is an innovative research based resource providing teachers with instructional strategies for students of all levels and abilities Each book in the collection focuses on a specific content area Clear concise guidance enables teachers to quickly integrate low prep high value lessons and strategies in their middle school and high school classrooms Every strategy follows a practical how to format established by the series editors The Math Teacher's Toolbox contains hundreds of student friendly classroom lessons and teaching strategies Clear and concise chapters fully aligned to Common Core math standards cover the underlying research required technology practical classroom use and modification of each high value lesson and strategy This book employs a hands on approach to help educators quickly learn and apply proven methods and techniques in their mathematics courses Topics range from the planning of units lessons tests and homework to conducting formative assessments differentiating instruction motivating students dealing with math anxiety and culturally responsive teaching Easy to read content shows how and why math should be taught as a language and how to make connections across mathematical units Designed to reduce instructor preparation time and increase student engagement and comprehension this book Explains the usefulness application and potential drawbacks of each instructional strategy Provides fresh activities for all classrooms Helps math teachers work with ELLs advanced students and students with learning differences Offers real world guidance for working with parents guardians and co teachers The Math Teacher's

Analysis and Modeling of Relationships Between Accidents and the Geometric and Traffic Characteristics of the Interstate System

United States. Public Roads Bureau, Julie Anna Fee, Stephen K. Dietz, Richard L. Beatty, 1969 Principal findings of this study were that geometrics alone account for only a small portion of the variance in accidents and that no relationship could be established between fatalities and the geometrics studied The geometrics studied include several types of interchanges paved shoulders sight distance delineators surface types and other variables Mathematical models were developed which can provide estimates of the average number of accidents on a particular type of highway or interchange using the appropriate variables

Standards-based School Mathematics Curricula Sharon L. Senk,Denisse R. Thompson,2020-07-24 The Curriculum and Evaluation Standards for School Mathematics published by the National Council of Teachers of Mathematics in 1989 set forth a broad vision of mathematical content and pedagogy for grades K 12 in the United States These Standards prompted the development of Standards based mathematics curricula What features characterize Standards based curricula How well

do such curricula work To answer these questions the editors invited researchers who had investigated the implementation of 12 different Standards based mathematics curricula to describe the effects of these curricula on students learning and achievement and to provide evidence for any claims they made In particular authors were asked to identify content on which performance of students using Standards based materials differed from that of students using more traditional materials and content on which performance of these two groups of students was virtually identical Additionally four scholars not involved with the development of any of the materials were invited to write critical commentaries on the work reported in the other chapters Section I of Standards Based School Mathematics Curricula provides a historical background to place the current curriculum reform efforts in perspective a summary of recent recommendations to reform school mathematics and a discussion of issues that arise when conducting research on student outcomes Sections II III and IV are devoted to research on mathematics curriculum projects for elementary middle and high schools respectively The final section is a commentary by Jeremy Kilpatrick Regents Professor of Mathematics Education at the University of Georgia on the research reported in this book It provides a historical perspective on the use of research to guide mathematics curriculum reform in schools and makes additional recommendations for further research In addition to the references provided at the end of each chapter other references about the Standards based curriculum projects are provided at the end of the book This volume is a valuable resource for all participants in discussions about school mathematics curricula including professors and graduate students interested in mathematics education curriculum development program evaluation or the history of education educational policy makers teachers parents principals and other school administrators The editors hope that the large body of empirical evidence and the thoughtful discussion of educational values found in this book will enable readers to engage in informed civil discourse about the goals and methods of school mathematics curricula and related research
