

DIAGNOSTIC IMAGING REPORT

Patient Name: Putul Barua

Patient ID: 135799

Room numbers: CCU-4

X-Ray No.: 10-0460

Referring Physician: Simon Williams, MD, Pulmonology

Reason for Exam: Hemoptysis.

Date of Exam: 01/10/...

PROCEDURE: CT scan of chest without contrast.

FINDINGS: CT scan of the chest was performed in 7mm axial sections with no intravenous contrast enhancement. Comparison is made to previous CT scans done during his admission last year. There is interval resolution of the previously noted cavitary lesions in both upper lobes.

However, there is evidence of chronic residual infiltrates or scarring in both upper lobes as well as in the mid and lower lung fields posteriorly.

Heart again appears enlarged. There is evidence of mild bilateral pleural thickening. No interval pulmonary parenchymal or plural-based mass lesions. No mediastinal or hilar masses, no lymphadenopathy, no pleural effusions, and no significant lesions of the bony thorax.

IMPRESSION: Significant interval improvement with evidence of interval resolution of the previously described bilateral upper lobe cavitary lesions in the lung since his previous CT scans. There are residual chronic infiltrates or scarring in both upper lobes. There is also evidence of residual scarring or infiltrates in the mid and lower lung fields posteriorly. The heart is enlarged. No other significant findings.

Donna Harrison, MD

DH: hs

D: 01/10/...

T: 01/10/...

Articulation Sample Diagnostic Report
