

CONCEPT MAP

ASEXUAL REPRODUCTION

Life cannot be created de novo either it arises from pre-existing life. Reproduction is the only method by which continuity of life is ensured. It is of two types: asexual and sexual. Asexual reproduction is the formation of new individuals without involving fusion of gametes. It is uniparental as offspring are produced by a single parent.

Fission

- It is a type of asexual reproduction in which the parent organism divides into two or more daughter cells.
- In this type of reproduction, whole parent body acts as the reproductive unit.
- It is of three types:

Fig. Binary fission in (a) Amoeba (b) Paramecium

- Binary Fission** - In this, parent organism divides into two halves, each half forming an independent daughter organism. It can be simple (occurs through any plane, e.g., Amoeba), longitudinal (plane of division is longitudinal axis of body, e.g., Spirogyra), transverse (plane of division runs along transverse axis of body, e.g., Paramecium) and oblique (plane of division is oblique, e.g., Ceratium).

- Multiple Fission** - In this process, parent body divides into many similar daughter organisms. It occurs during unfavourable conditions. Nucleus of the parent divides by repeated mitosis into many nuclei which eventually form several daughter cells. E.g., Amoeba (Plasmodium (malaria parasite)).

Fig. Multiple fission (a) Amoeba (b) Malaria parasite

Budding

- Budding refers to the process of formation of daughter individuals from a small projection or bud arising on the parent body.
- Each bud enlarges, develops parental characters and separates to live an independent life.
- Budding can be either **exogenous** (formed on the outer surface, e.g., Hydra, yeast) or **endogenous** (formed inside parent body, e.g., Spongia). In Spongia, buds are called **gemmules**.

Fig. (a) Exogenous budding in Hydra (b) Endogenous budding in Spongia

CHARACTERISTICS OF ASEAXUAL REPRODUCTION

- It is more primitive than sexual reproduction as it involves only mitotic divisions.
- New organisms are produced from the somatic part of parental organism, so it is also called as **somulogonic reproduction**.
- New individuals produced are genetically similar to the parent as well as to each other and are called **clones**. Hence, it plays no role in evolution.
- Unit of reproduction may be either whole parent body, or a bud, or a body fragment, or a single somatic cell.
- It is usually found in lower organisms like protists (Amoeba, Paramecium), sponges (Opheus), coelenterates (Hydra, Tubularia, etc.), certain flatworms (Planaria), some worms and tunicates (Dolys, Ascidia, etc.). It is absent in higher invertebrates and all vertebrates.

Regeneration

- It refers to the growth of new tissues or organs to replace lost or damaged part.
- Regeneration is of two types: **morphallaxis** (formation of whole body from a fragment) and **epimorphosis** (replacement of lost part). It can be reparative (regeneration of damaged tissue only) or restorative (development of severed body part). In epimorphosis, a mass of undifferentiated cell referred to as blastema is formed after wound healing and then the blastema cells actively proliferate to restore the lost part of the amputated organ.
- Regeneration is found in Hydra, starfish, planaria, etc.

Fig. (a) Regeneration in (i) Hydra (ii) Hydra (iii) Starfish (iv) Epimorphosis

TYPES OF ASEAXUAL REPRODUCTION

Fragmentation

- In this type of reproduction, parent body breaks into two or more pieces called fragments.
- Each fragment develops into a new organism.
- In fragmentation, rate of reproduction is high.
- It occurs in flatworms, sea anemones, coelenterates, echinoderms, algae like Spirogyra, etc.

Fig. Fragmentation in Spirogyra

Sporulation

- Spores are minute, single celled, thin or thick walled propagules which are dispersive structures released from the parent body and form new individuals. Spore formation is common in members of monera, protista, algae and fungi. Some of the commonly produced spores are:

- Zoospores** - Motile and flagellated spores produced inside zoosporangia. Flagella help in proper dispersal in aquatic habitat. E.g., algae and lower fungi like Phycomyces.
- Conidia** - These are spores produced singly or in chains by constriction at the tip or lateral side of special hyphal branches called conidiophores. These are dispersed by wind and germinate to form new individuals. E.g., Penicillium.
- Chlamydozoospores** - Thick walled spores produced directly from hyphal cells. May be terminal or intercalary in position and capable of withstanding unfavourable conditions. E.g., Rhizopus.
- Oidia** - Small fragments of hyphae that are thin walled and do not store reserve food material. Oidia give rise to new hyphae. These are formed under conditions of excess water, sugar and certain salts. E.g., Agaricus.
- Sporangiospores** - Non-motile spores produced inside sporangia. Usually get dispersed by wind and germinate to form new mycelium. E.g., Rhizopus, Mucor.

Learning How to Learn Joseph D. Novak,D. Bob Gowin,1984-09-28 For almost a century educational theory and practice have been influenced by the view of behavioural psychologists that learning is synonymous with behaviour change In this book the authors argue for the practical importance of an alternate view that learning is synonymous with a change in the meaning of experience They develop their theory of the conceptual nature of knowledge and describe classroom tested strategies for helping students to construct new and more powerful meanings and to integrate thinking feeling and acting In their research they have found consistently that standard educational practices that do not lead learners to grasp the meaning of tasks usually fail to give them confidence in their abilities It is necessary to understand why and how new information is related to what one already knows All those concerned with the improvement of education will find something of interest in Learning How to Learn

Asexual And Sexual Reproduction Genetics Concept Map Introduction

In the digital age, access to information has become easier than ever before. The ability to download Asexual And Sexual Reproduction Genetics Concept Map has revolutionized the way we consume written content. Whether you are a student looking for course material, an avid reader searching for your next favorite book, or a professional seeking research papers, the option to download Asexual And Sexual Reproduction Genetics Concept Map has opened up a world of possibilities. Downloading Asexual And Sexual Reproduction Genetics Concept Map provides numerous advantages over physical copies of books and documents. Firstly, it is incredibly convenient. Gone are the days of carrying around heavy textbooks or bulky folders filled with papers. With the click of a button, you can gain immediate access to valuable resources on any device. This convenience allows for efficient studying, researching, and reading on the go. Moreover, the cost-effective nature of downloading Asexual And Sexual Reproduction Genetics Concept Map has democratized knowledge. Traditional books and academic journals can be expensive, making it difficult for individuals with limited financial resources to access information. By offering free PDF downloads, publishers and authors are enabling a wider audience to benefit from their work. This inclusivity promotes equal opportunities for learning and personal growth. There are numerous websites and platforms where individuals can download Asexual And Sexual Reproduction Genetics Concept Map. These websites range from academic databases offering research papers and journals to online libraries with an expansive collection of books from various genres. Many authors and publishers also upload their work to specific websites, granting readers access to their content without any charge. These platforms not only provide access to existing literature but also serve as an excellent platform for undiscovered authors to share their work with the world. However, it is essential to be cautious while downloading Asexual And Sexual Reproduction Genetics Concept Map. Some websites may offer pirated or illegally obtained copies of copyrighted material. Engaging in such activities not only violates copyright laws but also undermines the efforts of authors, publishers, and researchers. To ensure ethical downloading, it is advisable to utilize reputable websites that prioritize the legal distribution of content. When downloading Asexual And Sexual Reproduction Genetics Concept Map, users should also consider the potential security risks associated with online platforms. Malicious actors may exploit vulnerabilities in unprotected websites to distribute malware or steal personal information. To protect themselves, individuals should ensure their devices have reliable antivirus software installed and validate the legitimacy of the websites they are downloading from. In conclusion, the ability to download Asexual And Sexual Reproduction Genetics Concept Map has transformed the way we access information. With the convenience, cost-effectiveness, and accessibility it offers, free PDF downloads have become a popular choice for students, researchers, and book lovers worldwide. However, it is crucial to

engage in ethical downloading practices and prioritize personal security when utilizing online platforms. By doing so, individuals can make the most of the vast array of free PDF resources available and embark on a journey of continuous learning and intellectual growth.
