Current Concepts in Autoimmunity and Chronic Inflammation Andreas Radbruch, Peter E. Lipsky, 2006-09-08 The immune system has been known to be capable of distinguishing self from non self since the pioneering work of Paul Ehrlich more than a century ago Originally described in experiments studying blood transfusion compatibility the principle of horror autotoxicus is still valid although today the phenomenon is usually described in terms of tolerance or ignorance A great deal has been learned about the various processes preventing self reactivity normally These include processes that operate during immune cell ontogeny and subsequently on reactivity of mature lymphocytes in the periphery They encompass mechanisms that are intrinsic to potentially reactive lymphocytes and can result in central or peripheral deletion or the alteration of functional potential In addition there are influences that are extrinsic to potentially auto reactive lymphocytes including the function of regulatory cells differentiation state of antigen presenting cells availability of self antigen the cytokine and chemokine milieu as well as the trafficking patterns involved in generating productive immune interactions It is clear that the immune system devotes a considerable effort to the avoidance of the development of potentially pathogenic self reactivity Despite this the development of self reactivity is relatively common though the development of autoimmune disease is less frequent autoimmune diseases such as rheumatoid arthritis multiple sclerosis systemic lupus erythematosus psoriasis thyroiditis and myasthenia gravis are all too common and can cause considerable morbidity and even mortality

Applied Concept Mapping Brian Moon, Robert R. Hoffman, Joseph Novak, Alberto Canas, 2011-02-07 The expanding application of Concept Mapping includes its role in knowledge elicitation institutional memory preservation and ideation With the advent of the CmapTools knowledge modeling software kit Concept Mapping is being applied with increased frequency and success to address a variety of problems in the workplace Supported by business applications

paratuberculosis and adherent invasive Escherichia coli This Topic aimed at bringing together contributions covering different genetic epigenetic immunological and microbial processes involved in the development of CD helping to drive forward the understanding of CD immunopathology

Bioinformational Philosophy and Postdigital Knowledge Ecologies Michael A. Peters, Petar Jandrić, Sarah Hayes, 2022-04-22 The book presents a cross disciplinary overview of critical issues at the intersections of biology information and society Based on theories of bioinformationalism viral modernity the postdigital condition and others this book explores two inter related questions Which new knowledge ecologies are emerging Which philosophies and research approaches do they require The book argues that the 20th century focus on machinery needs to be replaced at least partially by a focus on a better understanding of living systems and their interactions with technology at all scales from viruses through to human beings to the Earth's ecosystem This change of direction cannot be made by a simple relocation of focus and or funding from one discipline to another In our age of the Anthropocene human and planetary biology cannot be thought of without digital technology and society Today's curious bioinformational mix of blurred and messy relationships between physics and biology old and new media humanism and posthumanism knowledge capitalism and bio informational capitalism defines the postdigital condition and creates new knowledge ecologies The book presents scholarly research defining new knowledge ecologies built upon emerging forms of scientific communication big data deluge and opacity of algorithmic operations Many of these developments can be approached using the concept of viral modernity which applies to viral technologies codes and ecosystems in information publishing education and emerging knowledge journal systems It is within these overlapping theories and contexts that this book explores new bioinformational philosophies and postdigital knowledge ecologies
