

3-6 Arithmetic Sequences

To find the n th term of an arithmetic sequence when n is a large number, you need an equation or rule. Look for a pattern to find a rule for the sequence below.

1	2	3	4...	n	Position
↓	↓	↓	↓	←	
3,	5,	7,	9...		Term
a_1	a_2	a_3	a_4	a_n	←

The sequence starts with 3. The common difference d is 2. You can use the first term and the common difference to write a rule for finding a_n .

Math Education for America? Mark Wolfmeyer, 2013-12-04 Math Education for America analyzes math education policy through the social network of individuals and private and public organizations that influence it in the United States. The effort to standardize a national mathematics curriculum for public schools in the U.S. culminated in 2010 when over 40 states adopted the Common Core State Standards for Mathematics. Rather than looking at the text of specific policy documents, this book complements existing critical reviews of the national math education curriculum by employing a unique social network analysis. Breaking new ground in detailing and theorizing the politics of math education, Wolfmeyer argues that the private interests of this network are closely tied to a web of interrelated developments: human capital education policy debates over traditional and reform pedagogy, the assumed content knowledge deficit of math teachers, and the proliferation of profit-driven educational businesses. By establishing the interconnectedness of these interests with the national math education curriculum, he shows how the purported goals of math education reform are aligned with the prevailing political agendas of this social network rather than the national interest.

CRC Concise Encyclopedia of Mathematics Eric W. Weisstein, 2002-12-12 Upon publication, the first edition of the CRC Concise Encyclopedia of Mathematics received overwhelming accolades for its unparalleled scope, readability, and utility. It soon took its place among the top-selling books in the history of Chapman Hall/CRC, and its popularity continues unabated. Yet also unabated has been the demand for a new edition. *Christian Home Educators' Curriculum Manual* Cathy Duffy, 1995-07 Cathy Duffy draws upon her many years of home education experience, both in teaching and researching curriculum, to bring us the most thorough and useful book available on teaching teenagers at home. Numerical Quadrature and Solution of Ordinary Differential Equations A.H. Stroud, 2012-12-06 This is a textbook for a one semester course on numerical analysis for senior undergraduate or beginning graduate students with no previous knowledge of the subject The prerequisites are calculus some knowledge of ordinary differential equations and knowledge of computer programming using Fortran Normally this should be half of a two semester course the other semester covering numerical solution of linear systems inversion of matrices and roots of polynomials Neither semester should be a prerequisite for the other This would prepare the student for advanced topics on numerical analysis such as partial differential equations We are philosophically opposed to a one semester surveyor numerical methods course which covers all of the above mentioned topics plus perhaps others in one semester We believe the student in such a course does not learn enough about anyone topic to develop an appreciation for it For reference Chapter I contains statements of results from other branches of mathematics needed for the numerical analysis The instructor may have to review some of these results Chapter 2 contains basic results about interpolation We spend only about one week of a semester on interpolation and divide the remainder of the semester between quadrature and differential equations Most of the sections not marked with an can be covered in one semester The sections marked with an are included as a guide for further study
