Linshu Duan,2012-07-20 Die Mensch Maschine Schnittstellen HMIs von Infotainmentsystemen der heutigen Premiumfahrzeuge sind sehr komplexe und eingebettete Systeme Sie haben im Vergleich mit herk mmlichen PC Applikationen besondere Eigenschaften insbesondere bezogen auf ihre Variabilit t Die Variabilit t von Infotainmentsystem HMIs ergibt sich aus unterschiedlichen Fahrzeugmodellen Produktserien M rkten Ausstattungen System sowie Sprachvarianten Die hohe Anzahl der Varianten f hrt zu enorm hohem Testaufwand Modellbasiertes Testen ist ein vielversprechender Ansatz um den Testaufwand durch die automatische Testfallgenerierung und Testausf hrung zu reduzieren und gleichzeitig die Testabdeckung zu erh hen W hrend modellbasiertes Testen bereits f r Funktionstests h ufig eingesetzt wird bleiben HMI Tests meist noch manuell oder teil automatisiert Au erdem kann durch manuelles Testen eine systematische Testabdeckung nur sehr schwierig erreicht werden Zahlreiche Forschungsarbeiten befassen sich mit dem GUI Testen Variabilit t ist im Bereich der Software Produktentwicklung ein immer beliebteres Forschungsthema Ein modellbasierter Testansatz f r komplexe HMIs mit Ber cksichtigung der Variabilit t ist allerdings immer noch nicht vorhanden Diese Doktorarbeit pr sentiert eine modellbasierte Testmethode f r Infotainmentsystem HMIs mit dem besonderen Ziel das Variabilit tsproblem zu l sen Zus tzlich bietet diese Doktorarbeit eine Basis f r zuk nftiges HMI Testen in der Industrie an Der Ansatz in dieser Doktorarbeit basiert auf einem modellbasiertem HMI Testframework das zwei essentielle Komponenten beinhaltet eine Test orientierte Spezi kation und eine Komponente zur Testgenerierung Die Test orientierte Spezi kation hat eine geschichtete Struktur und ist darauf ausgerichtet die f rs Testen relevanten Daten zu spezi zieren Sowohl dynamisches Men verhalten als auch die Darstellung des HMI sind die Testziele Die Testgenerierung erzeugt automatisch Tests aus der Test orientierten HMI Spezi kation Das Testframework kann um eine automatische Testausf hrung erweitert werden Nachdem die generierten Tests instanziert werden ist es m glich sie automatisch innerhalb eines

Testautomatisierungsframeworks durchzuf hren Diese Doktorarbeit befasst sich mit Methoden um die HMI Varianten effizient zu spezifizieren und zu testen und basiert auf Ansatz f r Software Produktlinien Das bedeutet die Test orientierte Spezi kation ist erweitert um sowohl die Gemeinsamkeiten als auch die Spezialit ten der Varianten zu beschreiben Insbesondere werden Strategien entwickelt um Tests f r unterschiedliche Varianten der Produktlinien automatisch zu generieren Die Besonderheit dabei ist dass Redundanzen sowohl f r den Generierungsvorgang als auch den Ausf hrungsvorgang vermieden werden k nnen Das ist wegen den eingeschr nkten Ressourcen und aus Effizienzgr nden besonders wichtig f r die Industrie Die Modellierung und das Testen von variantenreichen HMIs stellen die Hauptbeitr ge dieser Dissertation dar Die Ergebnisse dieser Doktorarbeit k nnen hoffentlich als eine L sung f r modellbasiertes Testen der multi varianten HMIs dienen und der Automotive Industrie eine Basis der zuk nftigen HMI Testenstandards liefern The human machine interfaces HMIs of today s premium automotive infotainment systems are complex embedded systems which have special characteristics in comparison to GUIs of standard PC applications in particular regarding their variability The variability of infotainment system HMIs results from different car models product series markets equipment configuration possibilities system types and languages and necessitates enormous testing efforts The model based testing approach is a promising solution for reducing testing efforts and increasing test coverage However while model based testing has been widely used for function tests of subsystems in practice HMI tests have remained manual or only semi automated and are very time consuming and work intensive Also it is very difficult to achieve systematic or high test coverage via manual tests A large amount of research work has addressed GUI testing in recent years In addition variability is becoming an ever more popular topic in the domain of software product line development However a model based testing approach for complex HMIs which also considers variability is still lacking This thesis presents a modelbased testing approach for infotainment system HMIs with the particular aim of resolving the variability problem Furthermore the thesis provides a foundation for future standards of HMI testing in practice The proposed approach is based on a model based HMI testing framework which includes two essential components a test oriented HMI specification and a test generation component The test oriented HMI specification has a layered structure and is suited to specifying data which is required for testing different features of the HMI Both the dynamic behavior and the representation of the HMI are the testing focuses of this thesis The test generation component automatically generates tests from the test oriented HMI specification Furthermore the framework can be extended in order to automatically execute the generated tests Generated tests must first be initialized which means that they are enhanced with concrete user input data Afterwards initialized tests can be automatically executed with the help of a test execution tool which must be extended into the testing framework In this thesis it is proposed to specify and test different HMI variants which have a large set of commonalities based on the software product line approach This means the test oriented HMI specification is extended in order to describe the commonalities and variabilities between HMI variants of

an HMI product line In particular strategies are developed in order to generate tests for different HMI products One special feature is that redundancies are avoided both for the test generation and the execution processes This is especially important for the industrial practice due to limited test resources Modeling and testing variability of automotive HMIs make up the main research contributions of this thesis We hope that the results presented in this thesis will offer GUI testing research a solution for model based testing of multi variant HMIs and provide the automotive industry with a foundation for future HMI testing standards   **Motoring World** Delhi Press,2018-02-10 This magazines is a specialist motoring magazine we have always catered to the enthusiast in you and brought an unadulterated view of the world of motoring Sharp sassy clean wittier and edgier than ever before Drive it home today   **Networking Vehicles to Everything** Markus Mueck,Ingolf Karls,2018
