Aircraft Surveillance Systems Busyairah Syd Ali,2017-11-06 The Communication Navigation and Surveillance CNS systems provide air traffic controllers with the information necessary to ensure the specified separation between aircraft and

efficient management of airspace as well as assistance to flight crew for safe navigation. However, the radar systems that support air traffic management (ATM) and in particular air traffic control (ATC) are at their operational limit. This is particularly acute in the provision of the ATC services in low altitude remote and oceanic areas. Limitations in the current surveillance systems include unavailability of services in oceanic and remote areas, limited services during extreme weather conditions, and outdated equipment with limited availability of spare parts to support system operation. These limitations have resulted in fatal accidents. This book addresses the limitations of radar to support ATC in various operational environments identified and verified by analysing five years of safety data from Avinor, the Air Navigation Service Provider (ANSP) in Norway. It derives a set of taxonomy and from this develops a causal model for incident/accident due to limitations in the surveillance system. The taxonomy provides a new method for ANSPs to categorize incidents, while the causal model is useful for incident/accident investigations. The book also provides theoretical justifications for the use of Automatic Dependent Surveillance-Broadcast (ADS-B) to overcome the limitations of radar systems and identify areas of improvements to enable seamless ATC services. Written in a style that makes it accessible to non-specialists, *Aircraft Surveillance Systems* will be of interest to many in the field of aviation, particularly ATM safety and accident/incident investigation. It will also offer a useful reference on this vital topic for air traffic management courses.

Radiotherapy in Managing Brain Metastases Yoshiya Yamada, Eric Chang, John B. Fiveash, Jonathan Knisely, 2020-05-30. This book provides a radiotherapy perspective on the management of brain metastases with case-based discussion. This management has been rapidly evolving in the face of changing technology, progressing systemic therapy, and paradigm changes that all impact practice. These changes can be difficult, and this text gives a practical approach to help practitioners and trainees understand these changes and incorporate them into their practices. The work has two main sections: Clinical and Technical. The clinical section has chapters that address all aspects of radiation therapy for brain metastases, including integrating advances in surgery and drug treatments. The technical section focuses on the how-to aspects of treatment, including treatment planning and delivery. This is an ideal guide for practicing radiation oncologists and trainees.
