An Introduction to Sustainable Transportation Preston L. Schiller, 2017 **An Overview of Urban and Regional Planning** Yasar Ergen, 2018-12-19 Urban and regional planning is a spatial design practice that brings limitations to the intervention in natural areas to ensure a balance between population growth housing and employment in residential areas It includes spatial design that enables living creatures to live while planning the interventions to ensure suitability to ecology geology climate and land structure since intervention in nature should be balanced In this context the profession generally includes regional spatial and urban planning urban transformation that involves the urban decline areas in the city urban renewal and protection urban transportation and urban management Therefore it is believed that this book will be useful for those who work in this area on a practical or academic basis and follow the innovations in the profession *Sustainable Transport, Mobility Management and Travel Plans* Marcus Enoch, 2016-04-01 Charting the development of the travel plan as a concept this book draws on a range of research based contributions to determine the state of the art and to explore a series of future scenarios in this area for practitioners and policy makers Site based mobility management or travel plans address the transport problem by engaging with those organisations such as employers that are directly responsible for generating the demand for travel and hence have the potential to have a major impact on transport policy To do this effectively however travel plans need to be reoriented to be made more relevant to the needs of these organisations whilst the policy framework in which they operate needs modifying to better support their diffusion and enhance their effectiveness Marcus Enoch breaks down the travel plan concept into four axes related to its development namely segment scale structure and support and investigates the following questions What makes them special Why are they introduced What do they look like in terms of their design and the measures they use How common are they and in what sectors and location types How effective are they What barriers do they face and how might these be overcome Cycling Futures Jennifer Bonham, Marilyn Johnson, 2015-12-04 The focus of the first half of the book is largely on the current engagement with cycling challenges faced by existing and would be cyclists and the issues cycling might address The second half of the book is concerned with strategies and processes of change Contributors working from different ontological positions reflect on changing socio spatial relations to enable the broadest possible participation in cycling *The built environment and public health: New insights* Linchuan Yang, Ruoyu Wang, Bao-Jie He, Yu Ye, Yibin Ao, 2023-02-06 *Greening the South African Economy* Mark Swilling, Josephine Kaviti Musango, Jeremy Wakeford, 2016-02-23 The depletion of South Africa's and in some cases the world's natural resources and the degradation of environmental sinks including the atmosphere lakes and rivers and land are continuing at such a rate that natural resource prices are climbing and many critical ecosystem services that underpin human welfare are increasingly threatened The concept of the green economy has gained increasing traction in South African policy discourses over the past few years However in much of this discourse it is viewed in a piecemeal way as one

part or sector of the economy e.g. an industrial sector dealing with manufacture and installation of renewable energy technologies and energy efficient equipment and appliances. In the view of the authors, greening the South African economy requires an application of sustainability principles and practices across the full range of primary, secondary and tertiary sectors of the economy in an integrated manner. The aim of this book is therefore to apply principles of sustainability and green economics to the entire South African socio-economic system and its major elements in an integrated and comprehensive manner.

Society and the Environment Michael S. Carolan, 2024-04-18. The fourth edition of *Society and the Environment* centers its discussion on realistic solutions to the problems that persist and examines current controversies within a socio-organizational context, shifting focus away from simply explaining what is wrong with the world around us. Introducing this pragmatic environmentalism, Carolan discusses the complex pressures and variables that exist where ecology and society collide with population growth, the increase in demands for food and energy and transportation, and its outsized influence on urban and community patterns. With further attention given to the social phenomena and structural dynamics driving today's environmental problems, the book concludes with an important reflection on truly sustainable solutions and what constitutes meaningful social change. Each chapter in this interdisciplinary text follows a three-part structure, beginning with an overview of what is wrong and why. This leads into a discussion on each issue's wide-ranging implications, and finally, a balanced consideration of realistic solutions. Featuring updated and expanded examples, discussion points, and coverage of recent developments, including the US withdrawing from
