Fields Eckehard W. Mielke, 2017-01-22 This monograph aims to provide a unified geometrical foundation of gauge theories of elementary particle physics The underlying geometrical structure is unfolded in a coordinate free manner via the modern mathematical notions of fibre bundles and exterior forms Topics such as the dynamics of Yang Mills theories instanton solutions and topological invariants are included By transferring these concepts to local space time symmetries generalizations of Einstein's theory of gravity arise in a Riemann Cartan space with curvature and torsion It provides the framework in which the broken Poincar gauge theory the Rainich geometrization of the Einstein Maxwell system and higher dimensional non abelian Kaluza Klein theories are developed Since the discovery of the Higgs boson concepts of spontaneous symmetry breaking in gravity have come again into focus and in this revised edition these will be exposed in geometric terms Quantizing gravity remains an open issue formulating it as a de Sitter type gauge theory in the spirit of Yang Mills some new progress in its topological form is presented After symmetry breaking Einstein's standard general relativity with cosmological constant emerges as a classical background The geometrical structure of BRST quantization with non propagating topological ghosts is developed in some detail

Numerical Modeling of AAR Victor Saouma, 2013-12-19 This reference book presents the theory and methodology to conduct a finite element assessment of concrete structures subjected to chemically induced volumetric expansion in general and alkali aggregate reaction in particular It is limited to models developed by the author and focuses on how to best address a simple question if a structure suffers

Diagnosis & Prognosis of AAR Affected Structures Victor E. Saouma, 2020-09-21 This book presents the work of the RILEM Technical Committee 259 ISR Addressing two complementary but fundamental issues the kinetics of the reaction and how this will affect the integrity of the structure serviceability and strength it also provides methodology for assessing past deterioration to enable readers to make engineering science based predictions concerning future expansion The book is divided into six major topics selection and interpretation of optimal monitoring system for structures undergoing expansion to monitor the progress of the swelling evolution and its consequences development refinement of current laboratory procedures to determine the kinetics of the reaction i.e expansion vs future time and to determine the kinetic characteristics of the time dependent reaction to be used in a finite element simulation extrapolation of results from structural component laboratory testing selection of material properties based on data from existing structures affected by the alkali silica reaction or delayed ettringite formation identification of critical features that should be present in a finite element code development of test problems for validation and a survey of relevant programs able to conduct a transient structural analysis of a structure undergoing chemically induced expansion and lastly guidelines for finite element codes The book is intended for practitioners responsible for concrete structures affected by the damaging alkali aggregate reaction engineers dealing with aging structures and researchers in the field
