## **A Sea In Flames The Deepwater Horizon Oil Blowout:**

*A Sea in Flames* Carl Safina, 2011-04-19 Carl Safina has been hailed as one of the top 100 conservationists of the 20th century by Audubon Magazine and *A Sea in Flames* is his blistering account of the months long manmade disaster that tormented a region and mesmerized the nation. Traveling across the Gulf to make sense of an ever changing story and its often nonsensical twists Safina expertly deconstructs the series of calamitous misjudgments that caused the Deepwater Horizon blowout zeroes in on BP's misstatements evasions and denials reassesses his own reaction to the government's crisis handling and reviews the consequences of the leak and what he considers the real problems which the press largely overlooked. Safina takes us deep inside the faulty thinking that caused the lethal explosion. We join him on aerial surveys across an oil coated sea. We confront pelicans and other wildlife whose blue universe fades to black. Safina skewers the excuses and the silly jargon like junk shot and top kill that made the tragedy feel like a comedy of horrors and highlighted Big Oil's appalling lack of preparedness for an event that was inevitable. Based on extensive research and interviews with fishermen coastal residents biologists and government officials *A Sea In Flames* has some surprising answers on whether it was Obama's Katrina whether the Coast Guard was as inept in its response as BP was misleading and whether this worst unintended release of oil in history was really America's worst ecological disaster. Impassioned moving and even sharply funny *A Sea in Flames* is ultimately an indictment of America's main addiction. Safina writes In the end this is a chronicle of a summer of pain and hope. Hope that the full potential of this catastrophe would not materialize hope that the harm done would heal faster than feared and hope that even if we didn't suffer the absolutely worst we'd still learn the big lesson here. We may have gotten two out of three. That's not good enough. Because there'll be a next time. *The Environmental Case*

Judith A. Layzer, Sara R. Rinfret, 2019-08-13 Answers to environmental issues are not black and white. Debates around policy are often among those with fundamentally different values and the way that problems and solutions are defined plays a central role in shaping how those values are translated into policy. *The Environmental Case* captures the real world complexity of creating environmental policy and this much anticipated Fifth Edition contains fifteen carefully constructed cases. Through her analysis Sara Rinfret continues the work of Judith Layzer and explores the background players contributing factors and outcomes of each case and gives readers insight into some of the most interesting and controversial issues in U.S. environmental policymaking.

**The Age of Catastrophe** John David Ebert, 2012-09-13 Disasters both natural and man made are on the rise. Indeed a catastrophe of one sort or another seems always to be unfolding somewhere on the planet. We have entered into a veritable Age of Catastrophes which have grown both larger and more complex and now routinely very widespread in scope. The old days of the geographically isolated industrial accidents of the sinking of a Titanic or the explosion of a Hindenburg together with their isolated causes and limited effects are over. Now disasters on the scale of Hurricane Katrina the BP oil spill or the Japan tsunami and nuclear reactor accident threaten to engulf large swaths of

civilization This book analyzes the efforts of Westerners to keep the catastrophes outside while maintaining order on the inside of society These efforts are breaking down Nature and Civilization have become so intertwined they can no longer be separated Natural disasters moreover are becoming increasingly more difficult to differentiate from man made Instructors considering this book for use in a course may request an examination copy here [\*Stress Testing the USA\* J. Goldstein,2015-08-01

Every day people on Earth use about 90 million barrels of petroleum oil and natural gas to fuel cars buses airplanes farm equipment and factories to heat their homes and to manufacture detergents paints plastics and countless other products To get that petroleum oil and gas companies search all over the planet from northernmost Canada to deep under the ocean Because it is such a valuable commodity petroleum has become known as black gold And because of global dependence on this natural resource scholars say we are living in the Age of Oil Alongside its benefits petroleum has serious drawbacks It is not a renewable resource and many of Earth s most easily accessed petroleum deposits have been used up Companies have begun to search for oil in more difficult to reach places using controversial methods Extracting processing and refining oil is often environmentally destructive Oil spills and other accidents can contaminate soil and water kill wildlife and make people
