

The background of the cover features a 3D ball-and-stick model of a complex molecule, likely an aminophosphonic acid derivative. The model shows a central phosphorus atom (orange) bonded to two oxygen atoms (red) and a nitrogen atom (blue). The nitrogen atom is further bonded to a carbon atom (black), which is part of a larger organic structure. Other atoms include hydrogen (white), carbon (black), and oxygen (red). The model is set against a green background with faint chemical structures and labels like "NH", "OH", "CN", and "H,N".

Aminophosphonic and Aminophosphinic Acids Valery P. Kukhar, Harry R. Hudson, 2000-06-08 The key role of naturally occurring amino acids in the chemistry of life and as structural units in peptides proteins and enzymes has led to intense interest in the chemistry and biological activity of synthetic analogues The phosphorus analogues of the amino acids have attracted a particular interest in the fields of research directed at the discovery understanding and modification of physiological processes Aminophosphonic and Aminophosphinic Acids provides a comprehensive insight into the chemistry and biological activity of these compounds Separate chapters are devoted to naturally occurring derivatives synthetic procedures structural spectroscopic and analytical aspects metal complexes agrochemicals neuroactive compounds and biomedical applications and transition state analogue enzyme inhibitors with particular emphasis on inhibitors of HIV protease thrombin and human collagenase Aminophosphonic and Aminophosphinic Acids is a valuable source of information for researchers working with these types of compounds in biomedical and agrochemical industries and all others working with synthetic analogues of biologically important molecules

Organophosphorus Chemistry 2018 György Keglevich, 2020-03-05 Organophosphorus chemistry is an important discipline within organic chemistry Phosphorus compounds such as phosphines trialkyl phosphites phosphine oxides chalcogenides phosphonates phosphinates and P O H species etc may be important starting materials or intermediates in syntheses Let us mention the Wittig reaction and the related transformations the Arbuzov and the Pudovik reactions the Kabachnik Fields condensation the Hirao reaction the Mitsunobu reaction etc Other reactions e g homogeneous catalytic transformations or C C coupling reactions involve P ligands in transition metal Pt Pd etc complex catalysts The synthesis of chiral organophosphorus compounds means a continuous challenge Methods have been elaborated for the resolution of tertiary phosphine oxides and for stereoselective organophosphorus transformations P heterocyclic compounds including aromatic and bridged derivatives P functionalized macrocycles dendrimers and low coordinated P fragments are also of interest An important segment of organophosphorus chemistry is the pool of biologically active compounds that are searched and used as drugs or as plant protecting agents The natural analogue of P compounds may also be mentioned Many new phosphine oxides phosphinates phosphonates and phosphoric esters have been described which may find application on a broad scale Phase transfer catalysis ionic liquids and detergents also have connections to phosphorus chemistry Green chemical aspects of organophosphorus chemistry e g microwave assisted syntheses solvent free accomplishments optimizations and atom efficient syntheses represent a dynamically developing field Last but not least theoretical approaches and computational chemistry are also a strong sub discipline within organophosphorus chemistry
