*Killed by a Traffic Engineer* Wes Marshall, 2024-06-04 In the US we are nearing four million road deaths since we began counting them in 1899 The numbers are getting worse in recent years yet we continue to accept these deaths as part of doing business There has been no examination of why we engineer roads that are literally killing us Fixing the carnage on our roadways requires a change in mindset and a dramatic transformation of transportation This goes for traffic engineers in particular because they are still the ones in charge of our streets In *Killed by a Traffic Engineer* civil engineering professor Wes Marshall shines a spotlight on how little science there is behind the way that our streets are engineered which leaves safety as an afterthought While traffic engineers are not trying to cause deliberate harm to anyone he explains they are guilty of creating a transportation system whose designs remain largely based on plausible but unproven conjecture Thoroughly researched and compellingly

written Killed by a Traffic Engineer shows how traffic engineering research is outdated and unexamined at its best and often steered by an industry and culture considering only how to get from point A to B the fastest way possible to the detriment of safety quality of life equality and planetary health Marshall examines our need for speed and how traffic engineers disconnected it from safety the focus on capacity and how it influences design blaming human error relying on faulty data how liability drives reporting measuring road safety outcomes and the education and reeducation of traffic engineers Killed by a Traffic Engineer is ultimately hopeful about what is possible once we shift our thinking and demand streets engineered for the safety of people both outside and inside of cars It will make you look at your city and streets and traffic engineers in a new light and inspire you to take action

**Sustainable Cities in American Democracy** Carmen Sirianni, 2020-09-25 We face two global threats the climate crisis and a crisis of democracy Located at the crux of these crises sustainable cities build on the foundations and resources of democracy to make our increasingly urban world more resilient and just Sustainable Cities in American Democracy focuses on this effort as it emerged and developed over the past decades in the institutional field of sustainable cities a vital response to environmental degradation and climate change that is shaped by civic and democratic action Carmen Sirianni shows how various kinds of civic associations and grassroots mobilizing figure in this story especially as they began to explicitly link conservation to the future of our democracy and then develop sustainable cities as a democratic project These organizations are national local or multitiered from the League of Women Voters to the Natural Resources Defense Council to bicycle and watershed associations Some challenge city government agencies contentiously while others seek collaboration many do both at some point Sirianni uses a range of analytic approaches from scholarly disciplines policy design urban governance social movements democratic theory public administration and planning to understand how such diverse civic and professional associations have come to be both an ecology of organizations and a systemic and coherent project The institutional field of sustainable cities has emerged with some core democratic norms and civic practices but also with many tensions and trade offs that must be crafted and revised strategically in the face of new opportunities and persistent shortfalls Sirianni's account draws ambitious yet pragmatic and hopeful lessons for a Civic Green New Deal a policy design for building sustainable and resilient cities on much more robust foundations in the decades ahead while also addressing democratic deficits in our polarized political culture
