Handbook of Research on Text and Web Mining Technologies Song, Min, Brook Wu, Yi-Fang, 2008-09-30 Examines recent advances and surveys of applications in text and web mining which should be of interest to researchers and end users alike

The Oxford Handbook of Computational Linguistics Ruslan Mitkov, 2022-06-02 Ruslan Mitkov's highly successful Oxford Handbook of Computational Linguistics has been substantially revised and expanded in this second edition. Alongside updated accounts of the topics covered in the first edition it includes 17 new chapters on subjects such as semantic role labelling, text-to-speech synthesis, translation technology, opinion mining and sentiment analysis and the application of Natural Language Processing in educational and biomedical contexts among many others. The volume is divided into four parts that examine respectively the linguistic fundamentals of computational linguistics, the methods and resources used such as statistical modelling, machine learning and corpus annotation, key language processing tasks including text segmentation, anaphora resolution and speech recognition and the major applications of Natural Language Processing from machine translation to author profiling. The book will be an essential reference for researchers and students in computational linguistics and Natural Language Processing as well as those working in related industries.

Foundations of Artificial Intelligence David Kirsh, 1992 In the 11 contributions, theorists historically associated with each position identify the basic tenets of their position. Have the classical methods and ideas of AI outlived their usefulness? Foundations of Artificial Intelligence critically evaluates the fundamental assumptions underpinning the dominant approaches to AI. In the 11 contributions, theorists historically associated with each position identify the basic tenets of their position. They discuss the underlying principles, describe the natural types of problems and tasks in which their approach succeeds, explain where its power comes from and what its scope and limits are. Theorists generally skeptical of these positions evaluate the effectiveness of the method or approach and explain why it works to the extent they believe it does and why it eventually fails.

The International Handbook of Collaborative Learning Cindy E. Hmelo-Silver, Clark A. Chinn, Carol Chan, Angela M. O'Donnell, 2013-03-05 Collaborative learning has become an increasingly important part of education but the research supporting it is distributed across a wide variety of fields including social cognitive developmental and educational psychology, instructional design, the learning sciences, educational technology, socio-cultural studies and

computer supported collaborative learning The goal of this book is to integrate theory and research across these diverse fields of study and thereby to forward our understanding of collaborative learning and its instructional applications The book is structured into the following 4 sections 1 Theoretical Foundations 2 Research Methodologies 3 Instructional Approaches and Issues and 4 Technology Key features include the following Comprehensive and Global This is the first book to provide a comprehensive review of the widely scattered research on collaborative learning including the contributions of many international authors Cross disciplinary The field of collaborative learning is highly interdisciplinary drawing scholars from psychology computer science mathematics education science education and educational technology Within psychology the book brings together perspectives from cognitive social and developmental psychology as well as from the cross disciplinary field of the learning sciences Chapter Structure To ensure consistency across the book authors have organized their chapters around integrative themes and issues Each chapter author summarizes the accumulated literature related to their chapter topic and identifies the strengths and weaknesses of the supporting evidence Strong Methodology Each chapter within the extensive methodology section describes a specific methodology its underlying assumptions and provide examples of its application This book is appropriate for researchers and graduate level instructors in educational psychology learning sciences cognitive psychology social psychology computer science educational technology teacher education and the academic libraries serving them It is also appropriate as a graduate level textbook in collaborative learning computer supported collaborative learning cognition and instruction educational technology and learning sciences

Artificial Intelligence Methods and Tools for Systems Biology W. Dubitzky, Francisco Azuaje, 2007-09-29 This book provides simultaneously a design blueprint user guide research agenda and communication platform for current and future developments in artificial intelligence AI approaches to systems biology It places an emphasis on the molecular dimension of life phenomena and in one chapter on anatomical and functional modeling of the brain As design blueprint the book is intended for scientists and other professionals tasked with developing and using AI technologies in the context of life sciences research As a user guide this volume addresses the requirements of researchers to gain a basic understanding of key AI methodologies for life sciences research Its emphasis is not on an intricate mathematical treatment of the presented AI methodologies Instead it aims at providing the users with a clear understanding and practical know how of the methods As a research agenda the book is intended for computer and life science students teachers researchers and managers who want to understand the state of the art of the presented methodologies and the areas in which gaps in our knowledge demand further research and development Our aim was to maintain the readability and accessibility of a textbook throughout the chapters rather than compiling a mere reference manual The book is also intended as a communication platform seeking to bridge the cultural and technological gap among key systems biology disciplines To support this function contributors have adopted a terminology and approach that appeal to audiences from different backgrounds

Handbook of Research on

Applied Intelligence for Health and Clinical Informatics Thakare, Anuradha Dheeraj, Wagh, Sanjeev J., Bhende, Manisha Sunil, Anter, Ahmed M., Gao, Xiao-Zhi, 2021-10-22 Currently informatics within the field of public health is a developing and growing industry Clinical informatics are used in direct patient care by supplying medical practitioners with information that can be used to develop a care plan Intelligent applications in clinical informatics facilitates with the technology based solutions to analyze data or medical images and help clinicians to retrieve that information Decision models aid with making complex decisions especially in uncertain situations The Handbook of Research on Applied Intelligence for Health and Clinical Informatics is a comprehensive reference book that focuses on the study of resources and methods for the management of healthcare infrastructure and information This book provides insights on how applied intelligence with deep learning experiential learning and more will impact healthcare and clinical information processing The content explores the representation processing and communication of clinical information in natural and engineered systems This book covers a range of topics including applied intelligence medical imaging telehealth and decision support systems and also looks at technologies and tools used in the detection and diagnosis of medical conditions such as cancers diabetes heart disease lung disease and prenatal syndromes It is an essential reference source for diagnosticians medical professionals imaging specialists data specialists IT consultants medical technologists academicians researchers industrial experts scientists and students Handbook of Research on Digital Crime, Cyberspace Security, and Information Assurance Cruz-Cunha, Maria Manuela, Portela, Irene Maria, 2014-07-31 In our hyper connected digital world cybercrime prevails as a major threat to online security and safety New developments in digital forensics tools and an understanding of current criminal activities can greatly assist in minimizing attacks on individuals organizations and society as a whole The Handbook of Research on Digital Crime Cyberspace Security and Information Assurance combines the most recent developments in data protection and information communication technology ICT law with research surrounding current criminal behaviors in the digital sphere Bridging research and practical application this comprehensive reference source is ideally designed for use by investigators computer forensics practitioners and experts in ICT law as well as academicians in the fields of information security and criminal science Readings in Machine Learning Jude W. Shavlik, Thomas Glen Dietterich, 1990 The ability to learn is a fundamental characteristic of intelligent behavior Consequently machine learning has been a focus of artificial intelligence since the beginnings of AI in the 1950s The 1980s saw tremendous growth in the field and this growth promises to continue with valuable contributions to science engineering and business Readings in Machine Learning collects the best of the published machine learning literature including papers that address a wide range of learning tasks and that introduce a variety of techniques for giving machines the ability to learn The editors in cooperation with a group of expert referees have chosen important papers that empirically study theoretically analyze or psychologically justify machine learning algorithms The papers are grouped into a dozen categories each of which is introduced by the editors **Inductive Logic**

Programming Hendrik Blockeel, 2008-03-14 This book constitutes the thoroughly refereed post conference proceedings of the 17th International Conference on Inductive Logic Programming ILP 2007 held in Corvallis OR USA in June 2007 in conjunction with ICML 2007 the International Conference on Machine Learning The 15 revised full papers and 11 revised short papers presented together with 2 invited lectures were carefully reviewed and selected from 38 initial submissions The papers present original results on all aspects of learning in logic as well as multi relational learning and data mining statistical relational learning graph and tree mining relational reinforcement learning and learning in other non propositional knowledge representation frameworks Thus all current topics in inductive logic programming ranging from theoretical and methodological issues to advanced applications in various areas are covered

Artificial Intelligence for Academic Libraries Clifford B. Anderson, Douglas H. Fisher, 2025-07-08 Artificial Intelligence for Academic Libraries provides a clear and dependable guide to the history theory and application of artificial intelligence AI and machine learning ML in academic libraries addressing the needs of librarians staff administrators and other stakeholders Emerging from a long running conversation between an academic librarian and a professor of computer science this book provides readers with a critical perspective on the history present and future of AI in libraries and information services Synthesizing the literature on AI ML and librarianship the authors provide the requisite background to evaluate the impact of these technologies on the information ecosystem The first half of the volume covers the fundamentals of AI notably the divergences between the two major AI paradigms as well as philosophical legal and ethical issues that arise from the use of AI The second half addresses specialized topics including hybrid AIs that bridge the dominant AI paradigms the responsible use of AI in research and learning and suggestions for professional development Artificial Intelligence for Academic Libraries will benefit academic librarians seeking to develop a solid understanding of AI and ML and their likely impact on library operations and services including student and faculty outreach The volume also serves as a pedagogical resource for library and information science students entering this rapidly changing field

A Guided Tour of Artificial Intelligence Research Pierre Marquis, Odile Papini, Henri Prade, 2020-05-08 The purpose of this book is to provide an overview of AI research ranging from basic work to interfaces and applications with as much emphasis on results as on current issues It is aimed at an audience of master students and Ph D students and can be of interest as well for researchers and engineers who want to know more about AI The book is split into three volumes the first volume brings together twenty three chapters dealing with the foundations of knowledge representation and the formalization of reasoning and learning Volume 1

Knowledge representation reasoning and learning the second volume offers a view of AI in fourteen chapters from the side of the algorithms Volume 2 AI Algorithms the third volume composed of sixteen chapters describes the main interfaces and applications of AI Volume 3 Interfaces and applications of AI This second volume presents the main families of algorithms developed or used in AI to learn to infer to decide Generic approaches to problem solving are presented ordered heuristic search as well as metaheuristics are considered Algorithms for processing logic based representations of various types first order formulae propositional formulae logic programs etc and graphical models of various types standard constraint networks valued ones Bayes nets Markov random fields etc are presented The volume also focuses on algorithms which have been developed to simulate specific intelligent processes such as planning playing learning and extracting knowledge from data Finally an afterword draws a parallel between algorithmic problems in operation research and in AI

Genetic Programming Julian F. Miller, Marco Tomassini, Pier Luca Lanzi, Conor Ryan, Andrea G.B. Tettamanzi, William B.

Langdon, 2003-06-29 This book constitutes the refereed proceedings of the 4th European Conference on Genetic Programming EuroGP 2001 held at Lake Como Italy in April 2001 The 17 revised full papers and 13 research posters presented were carefully reviewed and selected during a rigorous double blind refereeing process out of 42 submissions All current aspects of genetic programming are addressed ranging from theoretical and foundational issues to applications in a variety of fields such as robotics artificial retina character recognition financial prediction digital filter and electronic circuit design image processing data fusion and bio sequencing

Artificial Intelligence for Education Mario Allegra, Manuel Gentile, Giuseppe Città, Frank Dignum, Iza Marfisi-Schottman, 2023-11-27 What learning teaching and education will be in the next future is an open question Nevertheless believing that an increasing prevalence of AI may not influence the education field seems objectively unlikely In recent years the new renaissance of AI has stimulated discussion on how advances in AI can influence the educational sector and the future educational policies and the impact of AI on Technology Enhanced Learning TEL On the other side the attention of the education sector in artificial intelligence is complemented by the consideration that since the early days of AI researchers have shown for the education sector which has often seen education as one of the preferred application areas The interaction between the AI and TEL research fields led to the investigation of how the advance in AI could support the development of flexible inclusive personalized engaging and effective learning tools Besides research in this area could be a powerful tool to open the learning black box by providing a deeper understanding of how learning occurs The proposed Research Topic aims to gather contributions that provide a comprehensive picture of how AI is changing educational practices and how the key stakeholders in the educational community i e students teachers faculty and families perceive this ongoing change Relevant topics include but are not limited to AI applications in real world educational settings Intelligent Tutoring Systems Adaptive learning environments Learning design and AI Students profiling definition of the student model and ethical implications Intelligent techniques for objective and integrated students
