Effects of Alcohol Use on Immunity and Immune Responses Suhas Sureshchandra, Samantha Yeligar, Derrick R. Samuelson, Ilhem Messaoudi, 2023-11-29 Alcohol use disorder AUD is a significant global health burden Globally alcohol misuse is the fifth leading risk factor for premature death and disability and accounts for 3.3 million deaths annually Chronic alcohol use deleteriously affects both normal behavior e.g. depression anxiety and alcohol craving and physiology e.g. oxidative stress intestinal hyperpermeability immune dysfunction and organ damage Both heavy and binge drinking patterns alter immune frequencies compromise immune cell function resulting in increased morbidity and mortality Alcohol misuse can damage barrier functions in vital organs such as the lungs gut increase susceptibility to both bacterial and viral infections but delay wound healing Chronic alcoholics are also at a greater risk of developing Acute respiratory distress syndrome ARDS alcoholic liver disease ALD and certain cancers A lot of progress has been made in elucidating the relationship between alcohol consumption and immune function and how it affects human health However the mechanisms by which alcohol and its metabolites interact with peripheral and tissue resident immune systems remain poorly defined Defining specific systemic adaptations and molecular mechanisms is important for understanding the long term consequences of chronic alcohol use These studies will help devise new interventions or refine existing ones to target the immune system in mitigating alcohol related diseases The aim of this Research Topic is to bring together new research in the alcohol field exploring the broad molecular and cellular adaptations of binge and heavy drinking on peripheral and tissue immunity Studies would ideally include a combination of in vitro cell line models and in vivo animal models and/or human studies of alcohol induced end organ damage mediated by dysregulated immune responses Papers in this Research Topic could be used to identify complementary mechanisms and pathways that may be the focus of future therapeutic strategies We encourage the submission of Original Research articles as well as Reviews Mini Reviews and Perspectives covering the following or related topics

- 1 Innate and adaptive immune adaptations with moderate and heavy drinking
- 2 Transcriptional and epigenetic mechanisms of alcohol associated immune dysfunction
- 3 Alcohol microbiome cross talk and its role on immune function
- 4 Alcohol and tissue immunity impact on barrier function immune stromal cell crosstalk

### **Influence of Dietary Factors, Nutrients, and the Gut-Lung Axis on Respiratory Health**

Tomoko Suzuki, Naser Alsharairi, Inês Brandão, 2025-02-21

Dietary habits and nutrients are gaining increasing recognition as modifiable factors influencing respiratory health Food components including vitamins minerals fatty acids and bioactive compounds like flavonoids through their antioxidant and anti inflammatory properties have been associated with ameliorated lung function and attenuated viral infections To illustrate this multiple studies show that the Mediterranean diet known for its emphasis on fruits vegetables whole grains and olive oil has a beneficial effect on respiratory health Furthermore the dynamic interplay between diet and lungs appears to revolve around the immune system making immune interactions a central topic of discussion The substantial influence of the gut microbiota becomes evident when considering that approximately 70 80% of immune cells reside in the gut Hence the gut microbiota emerges as a crucial mediator of the impact of food on health including respiratory health Gut dysbiosis is believed to be associated with the etiology of respiratory lung diseases such as asthma COPD chronic bronchitis emphysema and lung cancer Microbiota derived metabolites such as short chain fatty acids SCFAs produced from the fermentation of non digestible carbohydrates have been reported to regulate gut inflammation Probiotics SCFAs bioactive compounds and dietary fiber as well as restricted dietary patterns have been shown to reduce gut inflammation and play a protective role in respiratory diseases However the exact mechanisms underlying these processes are still to be unravelled

**Vascular Immunity and Ischemic Stroke** Yanlin Zhang, Xia Wang, Jie Lu, 2024-11-18 Ischemic stroke is among the most severe diseases threatening human health of which atherosclerosis is the main pathophysiological basis In recent years both basic and clinical studies have confirmed that the immune system plays a core regulatory role in the occurrence and development of atherosclerosis Some patients with systemic immune diseases are more likely to develop atherosclerosis and its severity is higher than in patients without systemic immune disorders Immune cells are also involved in brain tissue damage and repair after ischemic stroke The clinical application of monoclonal antibodies targeting B cell surface molecules such as CD20 and survival factors such as BAFF in some chronic inflammatory diseases such as rheumatoid arthritis and psoriasis also provides new directions for the immunotherapy in ischemic stroke However finding the best target for drug intervention remains the biggest challenge and an attractive target for new strategies for ischemic stroke

Schlegel, 2024-06-13 The development clinical translation and recent efficacy of novel gene therapies targeting refractory malignancies has led to research that extends this technology to a variety of infectious and rheumatological diseases Unlike conventional drugs or antibodies T cells have the potential to target and exert effector function in response to disease in a dynamic manner acting as a living drug The most efficacious form of gene modified T cells to date is the chimeric antigen receptor CAR modified T cell which redirects the specificity of T cells to an antigen

expressed by tumor cells Clinical experience with autologous CAR T cells primarily in hematologic malignancies has underscored the feasibility and safety of the approach while also demonstrating dramatic and sustained antitumor effects through mechanisms orthogonal to those of traditional anticancer therapies However several challenging obstacles must be surmounted in order to improve the broader efficacy of this approach **The Biology and Treatment of Myeloid**

**Adaptive Immunity to Vaccine Development** Heinrich Korner,Uwe Ritter,2020-01-10 The parasitic disease leishmaniasis in its various clinical manifestations from self resolving skin lesion to deadly systemic infection is a serious health problem in

many developing countries and is considered to be a neglected tropical disease by the World Health Organization To date a vaccine is lacking and strategies to treat severe forms of leishmaniasis efficiently are missing Basic research using animal models of experimental visceral or cutaneous leishmaniasis has allowed to dissect the immune response to parasitic pathogens and has contributed substantially to many important paradigm changing insights such as the role of cytokines in helper T cell differentiation and the impact of myeloid cell subsets on innate and adaptive immunity One strength of experimental leishmaniasis is that tissue associated parasites constitute a self renewing antigen reservoir that needs to be controlled by adaptive and innate branches of the immune response Therefore mechanisms involved in wound healing chronic inflammation host pathogen interactions and the development of long lasting memory responses can be interrogated This research topic aims to cover a broad range of important concepts in adaptive and innate immunity to leishmaniasis and will include recent work including vaccine development to understand and fight this tropical disease We welcome both reviews and original research articles that cover the latest breakthroughs in leishmaniasis research We recognize that reproducibility is a fundamental aspect of research and thus welcome also confirmatory studies Advances in Human Immune System (HIS) Mouse Models for Studying Human Hematopoiesis and Cancer Immunotherapy Yasuyuki Saito,Alexandre P.
