SHELLY GARION, MICHAEL LARSEN, AND ALEXANDER LUBOTZKY

In memory of Fritz Grunewald, an inspiring mathematician and a dear friend

ABSTRACT. A Beauville surface is a rigid complex surface of the form $(C_1 \times C_2)/G$, where C_1 and C_2 are non-singular, projective, higher genus curves, and G is a finite group acting freely on the product. Bauer, Catanese, and Grunewald conjectured that every finite simple group G , with the exception of A_5 , gives rise to such a surface. We prove that this is so for almost all finite simple groups (i.e., with at most finitely many exceptions). The proof makes use of the structure theory of finite simple groups, probability theory, and character estimates.

Catanese [Cat] defined a *Beauville surface* to be an infinitesimally rigid complex surface of the form $X := (C_1 \times C_2)/G$, where C_1 and C_2 are non-singular projective curves of genus ≥ 2 , and G is a finite group acting freely on the product. Every $g \in G$ respects the product decomposition $C_1 \times C_2$. Let G^0 denote the subgroup of G (of index ≤ 2) which preserves the ordered pair (C_1, C_2) . Any Beauville surface can be presented in such a way that G^0 acts effectively on each factor. Catanese called such a presentation *minimal* and proved that it is unique [Cat, Proposition 3.13]. A Beauville surface is *mixed* (resp. *unmixed*) if $[G : G^0] = 2$ (resp. $G = G^0$).

There has been an effort to classify finite groups G appearing in minimal presentations of unmixed Beauville surfaces. A finite group G appears in this way if and only if it admits an *unmixed Beauville structure*. This consists of an ordered quadruple $(x_1, y_1, x_2, y_2) \in G$

Beauville Surfaces and Groups Ingrid Bauer, Shelly Garion, Alina Vdovina, 2015-04-14 This collection of surveys and research articles explores a fascinating class of varieties Beauville surfaces It is the first time that these objects are discussed from the points of view of algebraic geometry as well as group theory The book also includes various open problems and conjectures related to these surfaces Beauville surfaces are a class of rigid regular surfaces of general type which can be described in a purely algebraic combinatoric way They play an important role in different fields of mathematics like algebraic geometry group theory and number theory The notion of Beauville surface was introduced by Fabrizio Catanese in 2000 and after the first systematic study of these surfaces by Ingrid Bauer Fabrizio Catanese and Fritz Grunewald there has been an increasing interest in the subject These proceedings reflect the topics of the lectures presented during the workshop Beauville surfaces and groups 2012 held at Newcastle University UK in June 2012 This conference brought together for the first time experts of different fields of mathematics interested in Beauville surfaces

John P. Harnad, Pavel Winternitz, The Cremona Group and Its Subgroups Julie Déserti, 2021-04-13. The goal of this book is to present a portrait of the n -dimensional Cremona group with an emphasis on the 2-dimensional case. After recalling some crucial tools, the book describes a naturally defined infinite-dimensional hyperbolic space on which the Cremona group acts. This space plays a fundamental role in the study of Cremona groups as it allows one to apply tools from geometric group theory to explore properties of the subgroups of the Cremona group as well as the degree growth and dynamical behavior of birational transformations. The book describes natural topologies on the Cremona group, codifies the notion of algebraic subgroups of the Cremona groups and finishes with a chapter on the dynamics of their actions. This book is aimed at graduate students and researchers in algebraic geometry who are interested in birational geometry and its interactions with geometric group theory and dynamical systems.
