technologies Margolin also examines the work of key practitioners such as the matrix designer Ken Isaacs Throughout the book Margolin demonstrates the underlying connections between the many ways of reflecting on and practicing design He argues for the creation of an international interdisciplinary field of design research and proposes a new ethical agenda for designers and researchers that encompasses the responsibility to users the problems of sustainability and the complicated questions of how to set boundaries for applying advanced technology to solve the problems of human life Opinionated and erudite Victor Margolin's *The Politics of the Artificial* breaks fresh ground in its call for a new approach to design research and practice Designers engineers architects anthropologists sociologists and historians will all benefit from its insights

Graphic Design Theory Helen Armstrong, 2012-08-10 *Graphic Design Theory* is organized in three sections *Creating the Field* traces the evolution of graphic design over the course of the early 1900s including influential avant garde ideas of futurism constructivism and the Bauhaus *Building on Success* covers the mid to late twentieth century and considers the International Style modernism and postmodernism and *Mapping the Future* opens at the end of the last century and includes current discussions on legibility social responsibility and new media Striking color images illustrate each of the movements discussed and demonstrate the ongoing relationship between theory and practice A brief commentary prefaces each text providing a cultural and historical framework through which the work can be evaluated Authors include such influential designers as Herbert Bayer László Moholy-Nagy Karl Moser Katherine McCoy Michael Rock Lev Manovich Ellen Lupton and Lorraine Wild Additional features include a timeline glossary and bibliography for further reading A must have survey for graduate and undergraduate courses in design history theory and contemporary issues *Graphic Design Theory* invites designers and interested readers of all levels to plunge into the world of design discourse

Design Studies Audrey Bennett, 2006-08-31 In an age of globalization and connectivity the idea of mainstream culture has become quaint Websites magazines books and television have all honed in on ever diversifying subcultures hoping to carve out niche audiences that grow savvier and more narrowly sliced by the day Consequently the discipline of graphic design has undergone a sea change Where visual communication was once informed by a designer's creative intuition the proliferation of specialized audiences now calls for more research based design processes Designers who ignore research run the risk of becoming mere tools for communication rather than bold voices *Design Studies* a collection of 27 essays from an international cast of top design researchers sets out to mend this schism between research and practice The texts presented here make a strong argument for performing rigorous experimentation and analysis Each author outlines methods in which research has aided their design whether by investigating how senior citizens react to design aesthetics how hip hop culture can influence design or how design for Third World nations is affected by cultural differences Contributors also outline inspired ways in which design educators can teach research methods to their students Finally *Design Studies* is rounded out by five annotated bibliographies to further aid designers in their research This comprehensive reader is the definitive reference for this new direction in

graphic design and an essential resource for both students and practitioners

Beyond the Century of the Child Willem Koops, Michael Zuckerman, 2012-10-30 In 1900 Ellen Key wrote the international bestseller *The Century of the Child*. In this enormously influential book she proposed that the world's children should be the central work of society during the twentieth century. Although she never thought that her century of the child would become a reality, in fact it had much more resonance than she could have imagined. The idea of the child as a product of a protective and coddling society has given rise to major theories and arguments since Key's time. For the past half century the study of the child has been dominated by two towering figures: the psychologist Jean Piaget and the historian Philippe Ariès. Interest in the subject has been driven in large measure by Ariès's argument that adults failed even to have a concept of childhood before the thirteenth century and that from the thirteenth century to the seventeenth there was an increasing childishness in the representations of children and an increasing separation between the adult world and that of the child. Piaget proposed that children's logic and modes of thinking are entirely different from those of adults. In the twentieth century this distance between the spheres of children and adults made possible the distinctive study of child development and also specific legislation to protect children from exploitation, abuse, and neglect. Recent students of childhood have challenged the ideas those titans promoted; they ask whether the distancing process has gone too far and has begun to reverse itself. In a series of essays *Beyond the Century of the Child* considers the history of childhood from the Middle Ages to modern times from America and Europe to China and Japan, bringing together leading psychologists and historians to question whether we unnecessarily infantilized children and unwittingly created a detrimental wall between the worlds of children and adults. Together these scholars address the question whether a hundred years after Ellen Key wrote her international sensation, the century of the child has in fact come to an end.

Perception-Cognition Interface & Cross-Modal Experiences: Insights into Unified Consciousness Aleksandra Mroczko-Wąsowicz, 2017-01-26 The present Research Topic explores closely related aspects of mental functioning, namely an interplay between perception and cognition interactions among various sensory modalities and finally more or less unified conscious experiences arising in the context of these relations. Contributions emphasize a high flexibility observed in perception and may be seen as potential challenges to the traditional modular architecture of perceptual systems. Although the articles describe different phenomena, they follow one common theme: to investigate broadly understood unified experience by studying either perception-cognition integration or the integration between sensory modalities. These integrative processes may well apply to subpersonal unconscious representations. However, the aim here is to approach phenomenal experience and thus a straightforward way of thinking about it is in terms of conscious perception. Putting together scientific and philosophical concerns, this special issue encourages extending the study of perceptual experience beyond the single sense perception to advance our understanding of the complex interdependencies between different sensory modalities, other mental domains, and various kinds of unifying relations within conscious experience. It exhibits a

remarkable need to study these phenomena in tangent and so the authors examine a variety of ways in which our perceptual experiences may be cross modal or multisensory integrated embodied synesthetic cognitively penetrated or otherwise affected by top down influences The Research Topic comprises theoretical and empirical contributions of such fields as philosophy of mind cognitive science psychology and neuroscience in the form of hypothesis and theory articles original research articles opinion papers reviews and commentaries
