Vegetation Dynamics of Mongolia P.D. Gunin,Elizabeth A. Vostokova,Nadezhda I. Dorofeyuk,Pavel E. Tarasov,Clanton C. Black,2013-03-09 Mongolia is an expansive land locked country tilted by tectonic forces to the North that experiences extremes of continental climate Moisture carrying wind currents are scarce so that the land has extended highs and lows in its environment Culturally the people are mostly nomadic having been sustained for centuries by an economy based on domestic livestock grazing There is a saying that As the noses go so goes Mongolia referring to the domesticated grazing noses of sheep goats camels yaks or horses and wild ungulates such as gazelles The vast fenceless steppes of Mongolia furnish the vegetation for grazing With such extremes in climate it is clear that the vegetation must be resilient and dynamic to cope with the dictates of its extremely harsh environments Pollen profiles from lakes plant macrofossils and other data over the last 15 000 years show the dynamic nature of Mongolian vegetation Currently Mongolian society is experiencing

much human driven economic development which increases pressure on its vegetation The Great Khural Laws of 1995 forcefully addressed such environmental concerns with the expanded establishment of National Reserves and Parks But continued effort and vigilance must be expended to insure that Mongolian society will continue to be sustained by its vegetation This book highlights work such as conserving and restoring plant diversity in various ecosystems and makes recommendations for sustaining the vegetation basis of the nomadic Mongolian society **Vegetation science**

applications for rangeland analysis and management P.T. Tueller,2012-12-06 Natural grasslands pastures and meadows are among the vegetation types most frequently investigated with phytosociological methods This was one of the reasons why volume 13 Application of vegetation science to grassland husbandry and agriculture edited by W Krause appeared as one of the first volumes of this handbook It appeared under the chief editorship of Prof R Tiixen and in his time main emphasis of the handbook was placed on Ziirich Montpellier methods and the European vegetation When we redesigned the handbook we felt the need to include other methods and aims of grassland analyses as well as a more global coverage of grasslands Especially the natural dry and semidry areas of the world needed to be covered was very fortunate in getting Prof Tueller of the University of Reno I Nevada as an editor for this volume He and the colleagues he motivated to compile volume 14 on Application of vegetation science to rangeland analysis and management have created a truly global coverage of the topics interesting for vegetation analyses in natural grasslands Since volume 13 covered the problems of anthropogenically created grasslands this topic was not expressly treated in order to avoid duplication For the same reason no specific attempt was made to get more papers from Europe and the temperate forest region in general The cooperation with Dr Tueller has been very rewarding for me **Rangelands of the Arid and Semi-arid Zones in Uzbekistan** Gustave Gintzburger,2003 This abundantly illustrated book presents a panorama of the biodiversity climatology and flora of the arid zones of Uzbekistan and describes around 150 dominant range species with their ecology utilization and range rehabilitation techniques It should contribute to a better understanding of these little known arid zones of Central Asia and to the conservation and rational use of their fragile natural resources **Proceedings RMRS.** ,1998 Revegetation with Native Species Society for Ecological Restoration.
