Getting started with AbaqusCAE - Using Additional Techniques to Create and Analyze a Model in ABAQUS/CAE

Click 'Start' from the left corner,
then select the following

Objectives:

- 1) Carry out the hinge tutorial (**completion today is not expected!**)
- 2) Do the tutorial again without using the instruction
- 3) Understand why contact analysis is required, e.g. what is the main differences between this tutorial and tutorial one or two?

Using Additional Techniques to Create and Analyze a Model in Abaqus/CAE

Creating and Analyzing a Simple Model in Abaqus/CAE explains how to create and analyze a more complex model composed of only one part. In this extended tutorial for the experienced Abaqus user you will create and analyze a more complex model. The model is more complex in two levels:

- It consists of three different parts rather than just one. This tutorial illustrates how you position instances of these parts to create the assembly and how you define contact between surfaces of the assembly.
- It involves parts that you will create using advanced sketching techniques. You will learn how to create custom geometry, and geometric constraints, to define the geometry that make up individual parts. You will also learn how you can modify a part by adding a feature and how modified parts are regenerated.

As in *Creating and Analyzing a Simple Model in Abaqus/CAE*, you will apply section properties, loads, and boundary conditions to the model; you will also mesh the model, configure the analysis, and run the analysis job. At the end of the tutorial you will view your analysis results. The entire tutorial takes approximately three hours to complete.

This tutorial assumes that you are familiar with the techniques described in *Creating and Analyzing a Simple Model in Abaqus/CAE*, including the following:

- Using the view manipulation tools to rotate and zoom an object in the viewport.
- Following the prompts in the prompt area.
- Using the mouse to select objects, create objects, and delete objects within the viewport.

In this section:

- 1) Creating an assembly composed of a large hole together by a pin
- 2) Creating the first large piece
- 3) Assigning section properties to the large part
- 4) Creating and modifying a second large part
- 5) Creating the pin
- 6) Assembling the model
