The theme of the conference focused on fostering, encouraging, and promoting research and development in the application of integrated information technology (IT) throughout the life cycle of the design, construction, and occupancy of buildings and related facilities. The CIB International Council for Research and Innovation in Building Construction was established in 1953 as an association whose objectives were to stimulate and facilitate international cooperation and information exchange between governmental research institutes in the building and construction sector with an emphasis on those institutes engaged in technical fields of research. The book combines the analytical capabilities of experts in operations research and management, economics, risk analysis, and defense management and presents graph theoretical analysis, advanced statistics, and applied modeling methods. In many chapters, the authors provide reproducible code that is available from the publisher's website. Lastly, the book identifies and discusses implications for risk assessment, policy, and insurability. The insights it offers are globally applicable and not limited to particular locations, countries, or contexts. Researchers, intelligence analysts, homeland security staff, and professionals who operate critical infrastructures will greatly benefit from the methods, models, and findings presented. While each of the twelve chapters is self-contained, taken together they provide a sound basis for informed decision making and more effective operations, policy, and defense. **Interior Design Visual Presentation** Maureen Mitton, 2012-03-07.
