*Region* Simon Richards,Robert Schmidt III,Cagri Sanliturk,Falli Palaiologou,2023-07-28 This book explores how the concept of region has evolved over time and shaped architectural culture and practice It questions what the words region and regional mean for architecture cities and landscapes past and present and speculates on the forms they might take in the future Region is explored in many thematic guises as a real geographical site of evolving socio economic activity as a mythical locus of enduring value as a gatekeeper of indigenous crafts and vernacular techniques as a site of architectural and artistic imagination as a repository of contested conflicted and mobile identities The contributing chapters take these themes from the theoretical and literary page through to architectural and urban practice and from the scale of the domestic hearth through to the ocean archipelago and international law enriching the long standing trope of viewing architectural regionalism purely as a matter of style Curated into four key thematic areas Theorised Regions Contested Regions Heritage

Regions and Future Regions the book incorporates the values concerns and approaches of a truly diverse international community of scholars curators and practitioners as well as the design work of international students tasked to explore what region means to them
