chapters in this edited volume reflect important recent advances in interdisciplinary knowledge on the governance management practice and science policy interfaces of groundwater. An insightful resource for researchers and planners in the field of environmental policies, water laws, climate change and groundwater governance, this book comes with a new Introduction. The other chapters were originally published in *Water International*. Military Aspects of Hydrogeology Edward P. F. Rose, J. D. Mather, 2012. This book contains 20 papers from authors in the UK, USA, Germany and Austria. Historically, it gives examples of the influence of groundwater on battlefield tactics and fortress construction, describes how groundwater was developed for water supply and overcome as an obstacle to military engineering and cross country vehicular movement by both sides in World Wars I and II and culminates with examples of the application of hydrogeology to site boreholes in recent conflicts notably in Afghanistan. Examples of current research described include hydrological model development, the impact of variations in soil moisture on explosive threat detection and cross country vehicle mobility, contamination arising from defence sites and its remediation, privatization of water supplies and the equitable allocation of resources derived from an international transboundary aquifer. Methods to investigate the hydrology of the Himalayan springs Chinnasamy, Pennan, Prathapar, Sanmugam A., 2016-06-10. Springs are the major source of freshwater in many small mountainous watersheds within the Himalayan region. In recent years, their flow rates have diminished but the reasons for this are not self evident and hence this paper reviews the methods to investigate Himalayan springs. The review reveals that chemical and isotope analyses, mostly water dating and stable isotope e.g. $\delta^{18}\text{O}$ analyses, could be an appropriate entry point to commence field investigations because of their potential to map complex spring pathways including linkages between aquifers. This should be combined with the building of hydrogeological maps with the available data. Output from desktop analyses, field investigations and hydrogeological maps could then contribute to the establishment of a conceptual model which could form the basis for a numerical model. *Urban and Regional Data Management* Massimo Rumor, Volker Coors, Elfriede M. Fendel, Sisi Zlatanova, 2007-10-04. Spatial technologies like GIS, CAD and spatial DBMS have proved their applicability and usability in almost every sector of urban development. Urban Planning Systems, Public Participation Systems and others have been continuously developed and improved, contributing to better decision making, communicating ideas between different actors as well as
