Architecture Choice Or Fate:

Architecture Léon Krier, 1998 This polemic is essential reading for anyone concerned with the state and direction of architecture and urban planning today and will provoke wide ranging discussion *The Imperfect City: On Architectural Judgment* Samir Younes, 2016-03-03 If architectural judgment were a city a city of ideas and forms then it is a very imperfect city When architects judge the success or failure of a building the range of ways and criteria which can be used for this evaluation causes many contentious and discordant arguments Proposing that the increase in number and intensity of such arguments threatens to destabilize the very grounds upon which judgment is supposed to rest this book examines architectural judgment in its historical cultural political and psychological dimensions and their convergence on that most expressive part of architecture namely architectural character It stresses the value of reasoned judgment in justifying architectural form a judgment based on three sets of criteria those criteria that are external to architecture those that are internal to architecture and those that pertain to the psychology of the architect as image maker External criteria include philosophies of history or theories of modernity internal criteria include architectural character and architectural composition while the psychological criteria pertain to mimetic rivalry or rivaling desires for the same architectural forms Yet although architectural conflicts can adversely influence judgment they can at the same time contribute to the advancement of architectural culture **Unified Architectural Theory: Form, Language, Complexity** Nikos A. Salingaros, 2017-06-05

together Moving from the regional scale down to the scale of places the book examines the goals and strategies of the urban designer from the viewpoints of the private sector public sector and community The text is illustrated throughout with photographs and drawings that make theory and practice relevant and alive

Urban Theory and the Urban Experience Simon Parker, 2003-11-06 For the first time Urban Theory and the Urban Experience brings together classic and contemporary approaches to urban research in order to reveal the intellectual origins of urban studies and the often unacknowledged debt that empirical and theoretical perspectives on the city owe to one another Both students and urban scholars will appreciate the critical way in which classical and contemporary debates on the nature of the city are presented Extensive use is made throughout of documentary literary and cultural sources to bring the different theoretical perspectives to life Discussion points introduce and explain key concepts and intellectual histories in a jargon free manner End of chapter further readings have also been annotated to encourage additional study

How to Think Seriously about the Planet Roger Scruton, 2014-10 Roger Scruton here makes a plea to rescue environmental politics from the activist movements and to return them to the people The book defends the legacy of home building and practical reasoning with which ordinary human beings solve their environmental problems and attacks the alarmism and hysteria that are being used to uproot these resources while putting nothing coherent in their place

The Palgrave Handbook of Bottom-Up Urbanism Mahyar Arefi, Conrad Kickert, 2018-06-27 Who shapes our cities In an age of increasing urban pluralism globalization and immigration decreasing public budgets and an ongoing crisis of authority among designers and planners the urban environment is shaped by a number of non traditional stakeholders The book surveys the kaleidoscope of views on the agency of urbanism providing an overview of the various scholarly debates and territories that pertain to bottom up efforts such as everyday urbanism DIY urbanism guerilla urbanism tactical urbanism and lean urbanism Uniquely this books seeks connections between the various movements by curating a range of views on the past present and future of bottom up urbanism The contributors also connect the recent trend of

bottom up efforts in the West with urban informality in the Global South drawing parallels and finding contrast between social and institutional structures across the globe The book appeals to urbanists in the widest sense of the word those who shape study and improve our urban spaces

Monumental Lies Robert Bevan,2022-10-11 How statues heritage and the built environment have become the battleground for the culture wars The past is weaponised in culture wars and cynically edited by those who wish to impose their ideology upon the physical spaces around us Holocaust deniers use details of the ruins of the gas chambers Auschwitz to promote their lies No Holes No Holocaust Yet long standing concepts such as authenticity in heritage are undermined and trivialised by gatekeepers such as UNESCO At the same time opposition to this manipulation is being undermined by cultural ideas that prioritise memory and impressions over history and facts In *Monumental Lies* Robert Bevan argues that monuments architecture and cities are material evidence of history They are the physical trace of past events of previous ways of thinking and of politics economics and values that percolate through to today When our cities are reshaped as fantasies about the past when monuments tell lies about who deserves honour or are destroyed and the struggle for justice forgotten the historical record is being manipulated When decisions are based on misinformed assumptions about how the built environment influences our behaviour or we are told falsely that certain architectural styles are alien to our cities or when space pretends to be public but is private or that physical separation is natural we are being manipulated There is a growing threat to the material evidence of the truth about history We are in serious trouble if we can no longer trust the tangible world around us to tell us the truth *Monumental Lies* explores the threats to our understanding of the built environment and how it impacts on our lives as well as offers solutions to how to combat the ideological manipulations

Complex Systems, Smart Territories and Mobility Patricia Sajous,Cyrille Bertelle,2021-01-27 This book reflects the outcome of contribution by the plural community and of the interactions between disciplines With the mass of data available through Information and Communication Technologies ICT in an unprecedented quantity since the Human History it is now possible to access dimensions of knowledge that though not hidden could not be grasped in the same way in the past The question of how this information can be used for the benefit of institutional and economic actors to foster the development of a territory Tackling the issue from a resolutely interdisciplinary perspective the authors explore the theories and methods of complex systems in order to discuss how they can contribute in these new circumstances to territorial intelligence and to the development practices in which it is embodied This book illustrates how today s research explores the multiple facets of territorial systems in order to reproduce their richness It invites readers to learn about the challenges ideas results and advances present in this domain

Sitte, Hegemann and the Metropolis Charles Bohl,Jean-François Lejeune,2009-06-02 These essays from leading names in the field weave together the parallels and differences between the past and present of civic art Offering prospects for the first decades of the twenty first century the authors open up a broad international dialogue on civic art which relates historical practice to the contemporary meaning

of civic art and its application to community building within today's multi-cultural modern cities. The volume brings together the rich perspectives on the thought, practice and influence of leading figures from the great era of civic art that began in the nineteenth century and blossomed in the early twentieth century as documented in the works of Werner Hegemann and his contemporaries and considered fundamental to contemporary practice. Buras, 2020-01-28 An accomplished architect and urbanist goes back to the roots of what makes cities attractive and livable, demonstrating how we can restore function and beauty to our urban spaces for the long term. Nearly everything we treasure in the world's most beautiful cities was built over a century ago. Cities like Prague, Paris and Lisbon draw millions of visitors from around the world because of their exquisite architecture, walkable neighborhoods and human scale. Yet a great deal of the knowledge and practice behind successful city planning has been abandoned over the last hundred years, not because of traffic, population growth or other practical hurdles, but because of ill-considered theories emerging from Modernism and reactions to it. The errors of urban design over the last century are too great not to question. The solutions being offered today—sustainability, walkability, smart and green technologies—hint at what has been lost and what may be regained, but they remain piecemeal and superficial. In [The Art of Classic Planning](#), architect and planner Nir Haim Buras documents and extends the time-tested and holistic practices that held sway before the reign of Modernism. With hundreds of full-color illustrations and photographs that will captivate architects, planners, administrators and developers, [The Art of Classic Planning](#) restores and revitalizes the foundations of urban planning. Inspired by venerable cities like Kyoto, Vienna and Venice, and by the great successes of L'Enfant's Washington, Haussmann's Paris and Burnham's Chicago, Buras combines theory and a host of examples to arrive at clear guidelines for best practices in classic planning for today's world. [The Art of Classic Planning](#) celebrates the enduring principles of urban design and invites us to return to building beautiful cities. **The Architecture of Community** Leon Krier, 2009-05-08 Leon Krier is one of the best-known and most provocative architects and urban

theoreticians in the world. Until now, however, his ideas have circulated mostly among a professional audience of architects, city planners and academics. In [The Architecture of Community](#), Krier has reconsidered and expanded writing from his 1998 book [Architecture: Choice or Fate](#). Here he refines and updates his thinking on the making of sustainable, humane and attractive villages, towns and cities. The book includes drawings, diagrams and photographs of his built works, which have not been widely seen until now. [Culture, Urbanism and Planning](#) Manuel Guardia, 2016-05-13 The relationship between culture and urbanism has been the focus of much discussion and debate in recent years. While globalisation tends towards a homogeneity, successful global cities have a strong individual and particularly cultural identity. The economic value of the culture of cities lies not only in the arts taking place there, but also in the city's fabric, its architecture and in its cultural heritage. This volume brings together a team of leading specialists to examine the policies of image and city marketing which have developed over the past 15 years and whether these are a continuity of earlier strategies. Featuring case studies which

illustrate diverse perspectives on linking culture urbanism and history the book reviews heritage and planning culture looking at the experience of urbanism in the Old Historic City The book also assesses the increasingly important issue of urban images and their influence on planning strategies

Constructal Law and the Unifying Principle of Design Luiz A.O. Rocha, Sylvie Lorente, Adrian Bejan, 2012-12-04 Design happens everywhere whether in animate objects e g dendritic lung structures bacterial colonies and corals inanimate patterns river basins beach slope and dendritic crystals social dynamics pedestrian traffic flows or engineered systems heat dissipation in electronic circuitry This design in nature often takes on remarkably similar patterns which can be explained under one unifying Constructal Law This book explores the unifying power of the Constructal Law and its applications in all domains of design generation and evolution ranging from biology and geophysics to globalization energy sustainability and security The Constructal Law accounts for the universal tendency of flow systems to morph into evolving configurations that provide greater and easier access over time The Constructal Law resolves the many and contradictory ad hoc statements of optimality end design and destiny in nature such as minimum and maximum entropy production and minimum and maximum flow resistance and also explains the designs that are observed and copied in biomimetics Constructal Law and the Unifying Principle of Design covers the fundamentals of Constructal Theory and Design as well as presenting a variety of state of the art applications Experts from the biological physical and social sciences demonstrate the unification of all design phenomena in nature and apply this knowledge to novel designs in modern engineering such as vascularization for self healing and self cooling materials for aircraft and tree fins and cavities for heat transfer enhancement

Frankenstein Urbanism Federico Cugurullo, 2021-05-16 This book tells the story of visionary urban experiments shedding light on the theories that preceded their development and on the monsters that followed and might be the end of our cities The narrative is threefold and delves first into the eco city second the smart city and third the autonomous city intended as a place where existing smart technologies are evolving into artificial intelligences that are taking the management of the city out of the hands of humans The book empirically explores Masdar City in Abu Dhabi and Hong Kong to provide a critical analysis of eco and smart city experiments and their sustainability and it draws on numerous real life examples to illustrate the rise of urban artificial intelligences across different geographical spaces and scales Theoretically the book traverses philosophy urban studies and planning theory to explain the passage from eco and smart cities to the autonomous city and to reflect on the meaning and purpose of cities in a time when human and non biological intelligences are irreversibly colliding in the built environment Iconoclastic and prophetic Frankenstein Urbanism is both an examination of the evolution of urban experimentation through the lens of Mary Shelley s Frankenstein and a warning about an urbanism whose product resembles Frankenstein s monster a fragmented entity which escapes human control and human understanding Academics students and practitioners will find in this book the knowledge that is necessary to comprehend and engage with the many urban experiments that are now alive ready to leave the laboratory and enter our

cities *A City Cannot Be a Work of Art* Sanford Ikeda, 2023-10-14 This open access book connects Jane Jacobs's celebrated urban analysis to her ideas on economics and social theory. While Jacobs is a legend in the field of urbanism and famous for challenging and profoundly influencing urban planning and design, her theoretical contributions, although central to her criticisms of and proposals for public policy, are frequently overlooked even by her most enthusiastic admirers. This book argues that Jacobs's insight that a city cannot be a work of art underlies both her ideas on planning and her understanding of economic development and social cooperation. It shows how the theory of the market process and Jacobs's theory of urban processes are useful complements, an example of what economists and urbanists can learn from each other. This Jacobs cum market process perspective offers new theoretical, historical, and policy analyses of cities more realistic and coherent than standard accounts by either economists or urbanists.

Urban Informal Settlements Yunnan Ding, 2022-02-10 This book offers a concise and yet diverse study on the Chengzhongcun. It has a broader scope, both geographical and temporal, than existing works on this topic. The typical Chinese urban informal settlement is related to morphologically similar communities to be found elsewhere in the world. The chapter's themes were inspired by the methods in historical geography, citizenship studies, and new cultural geography. What is truly unique to this book is that ten years after the basis material of this book was defended, it is enriched with practical experience and first-hand observations of the rapidly changing Chinese city. As urbanization in China slows, this book will interest sociologists, urbanists, and scholars of China.
