Donald Hughes, 2015-05-11 Although the organizing principle of virtually every world history text is development the editor of this volume maintains that this traditional approach fails to address the issue of sustainability By adopting the ecological process as their major theme the authors show how the process of human interaction with the natural environment unfolded in the past and offer perspective on the ecological crises in our world at the beginning of the 21st century Topics range from broad regional studies that examine important aspects of the global environment that affect nations to a study of the widespread influence of one

important individual on his nation and beyond The authors take different approaches but all share the conviction that world history must take ecological process seriously and they all recognize the ways in which the living and non living systems of the earth have influenced the course of human affairs

From Societas to World Society Volker H. Schmidt,2025-05-29 From Societas to World Society

offers a genealogy of what is arguably sociology's most important concept that of society. The book covers this concept's entire intellectual history from its first systematization in Roman law 2,500 years ago to its crystallization in what Schmidt calls today's default model informing both empirical research and theoretical logic in the social sciences which he shows to be highly problematic. As an alternative, Schmidt suggests a conceptualization building upon Niklas Luhmann's theory of world society which can be utilized for overcoming the former's Eurocentrism and to lay the groundwork for a genuinely global social science.
