An Archaeology of the Cosmos Timothy R. Pauketat, 2013 An Archaeology of the Cosmos seeks answers to two fundamental questions of humanity and human history The first question concerns that which some use as a defining element of humanity religious beliefs Why do so many people believe in supreme beings and holy spirits The second question concerns changes in those beliefs What causes beliefs to change Using archaeological evidence gathered from ancient America especially case material from the Great Plains and the pre Columbian American Indian city of Cahokia Timothy Pauketat explores the logical consequences of these two fundamental questions Religious beliefs are not more resilient than other aspects of culture and society and people are not the only causes of historical change An Archaeology of the Cosmos examines the intimate association of agency and religion by studying how relationships between people places and things were bundled together and positioned in ways that constituted the fields of human experience This rethinking theories of agency and religion provides readers with challenging and thought provoking conclusions that will lead them to reassess the way they approach the past

The Science of Time 2016 Elisa Felicitas Arias,Ludwig Combrinck,Pavel Gabor,Catherine Hohenkerk,P. Kenneth Seidelmann,2017-10-05 The uses of time in astronomy from pointing telescopes coordinating and processing observations predicting ephemerides cultures religious practices history businesses determining Earth orientation analyzing time series data and in many other ways represent a broad sample of how time is used throughout human society and in space Time and its reciprocal frequency is the most accurately measurable quantity and often an important path to the frontiers of science But the future of timekeeping is changing with the development of optical frequency standards and the resulting challenges of distributing time at ever higher precision with the possibility of timescales based on pulsars and with the inclusion of higher order relativistic effects The definition of the second will likely be changed before the end of this decade and its realization will increase in accuracy the definition of the day is no longer obvious The variability of the Earth s rotation presents challenges of understanding and prediction In this symposium speakers took a closer look at time in astronomy other sciences cultures and business as a defining element of modern civilization The symposium aimed to set the stage for future timekeeping standards infrastructure and engineering best practices for astronomers and the broader society At the same time the program was cognizant of the rich history from Harrison s chronometer to today s atomic clocks and pulsar observations The theoreticians and engineers of time were brought together with the educators and historians of science enriching the understanding of time among both experts and the public

Our Hidden Landscapes Lucianne Lavin,Elaine Thomas,2023-10-31 Challenging traditional and long standing understandings this volume provides an important new lens for interpreting stone structures that had previously

been attributed to settler colonialism. Instead, the contributors to this volume argue that these locations are sacred Indigenous sites. This volume introduces readers to eastern North America's Indigenous ceremonial stone landscapes, CSLs, sacred sites whose principal identifying characteristics are built stone structures that cluster within specific physical landscapes. Our Hidden Landscapes presents these often unrecognized sites as significant cultural landscapes in need of protection and preservation. In this book, Native American authors provide perspectives on the cultural meaning and significance of CSLs and their characteristics, while professional archaeologists and anthropologists provide a variety of approaches for better understanding, protecting, and preserving them. The chapters present overwhelming evidence in the form of oral tradition, historic documentation, ethnographies, and archaeological research that these important sites created and used by Indigenous peoples are deserving of protection. This work enables archaeologists, historians, conservationists, foresters, and members of the general public to recognize these important ritual sites. Contributors: Nohham, Rolf, Cachat, Schilling, Robert, DeFosses, James, Gage, Mary, Gage, Doug, Harris, Julia, A, King, Lucianne, Lavin, Johannes, Jannie, H, N, Loubser, Frederick, W, Martin, Norman, Muller, Charity, Moore, Norton, Paul, A, Robinson, Laurie, W, Rush, Scott, M, Strickland, Elaine, Thomas, Kathleen, Patricia, Thrane, Matthew, Victor, Weiss. **Astronomy and Ceremony in the Prehistoric Southwest, Revisited** Gregory E. This volume contains selected papers from the 2011 Conference on Archaeoastronomy in the American Southwest held at the University of New Mexico.

The Archaeology of Ancient North America Timothy R. Pauketat, Kenneth E. Sassaman, 2020-02-27. Unlike extant texts, this textbook treats pre-Columbian Native Americans as history makers who yet matter in our contemporary world. **Astrology and Cosmology in the World's Religions** Nicholas Campion, 2023-11-21. An ambitious examination of cosmologies and astrologies from around the world. The diversity of cultures Campion includes is impressive. Jacqueline Feke, History of Astronomy. When you think of astrology, you may think of the horoscope section in your local paper or of Nancy Reagan's consultations with an astrologer in the White House in the 1980s. Yet almost every religion uses some form of astrology, some way of thinking about the sun, moon, stars, and planets and how they hold significance for human lives on earth. *Astrology and Cosmology in the World's Religions* offers an accessible overview of the astrologies of the world's religions, placing them into context within theories of how the wider universe came into being and operates. Campion traces beliefs about the heavens among peoples ranging from ancient Egypt and China to Australia and Polynesia and India and the Islamic world. Addressing each religion in a separate chapter, Campion outlines how, by observing the celestial bodies, people have engaged with the divine, managed the future, and attempted to understand events here on earth. This fascinating text offers a unique way to delve into comparative religions and will also appeal to those intrigued by New Age topics. Unlike most students of astrology, Campion transcends the limitations of Western tradition to examine the nature and roles of astrological and cosmological concepts in cultures from all continents. His examples provide original insights into how cosmologies shape these cultures.
