Creators of Mathematical and Computational Sciences Ravi P Agarwal, Syamal K Sen, 2014-11-11 The book records the

essential discoveries of mathematical and computational scientists in chronological order following the birth of ideas on the basis of prior ideas ad infinitum The authors document the winding path of mathematical scholarship throughout history and most importantly the thought process of each individual that resulted in the mastery of their subject The book implicitly addresses the nature and character of every scientist as one tries to understand their visible actions in both adverse and congenial environments The authors hope that this will enable the reader to understand their mode of thinking and perhaps even to emulate their virtues in life Measure for Measure Alex Hebra,2003 Will draw readers interested in recreational math Hebra emphasizes how quantities are defined and derived from basic units and converted from one system to another Good fun for the numerically minded Booklist Mathematical Reviews ,2000 *The Puzzle Instinct* Marcel Danesi,2004-02-20 Humans are the only animals who create and solve puzzles for the sheer pleasure of it and there is no obvious genetic reason why we would do this Marcel Danesi explores the psychology of puzzles and puzzling with scores of classic examples His pioneering book is both entertaining and enlightening Will Shortz Crossword Editor The New York Times Puzzle fanatics will enjoy the many riddles illusions cryptograms and other mind benders offered for analysis Psychology Today a bristlingly clear always intriguing survey of the history and rationale of puzzles A splendid study Knight Ridder Newspapers **Current Contents. Arts & Humanities** Institute for Scientific Information,2001 **Landscape of the Mind** John F. Hoffercker,2011-05-31 In Landscape of the Mind John F Hoffercker explores the origin and growth of the human mind drawing on archaeology history and the fossil record He suggests that as an indirect result of bipedal locomotion early humans developed a feedback relationship among their hands brains and tools that evolved into the capacity to externalize thoughts in the form of shaped stone objects When anatomically modern humans evolved a parallel capacity to externalize thoughts as symbolic language individual brains within social groups became integrated into a neocortical Internet or super brain giving birth to the mind Noting that archaeological traces of symbolism coincide with evidence of the ability to generate novel technology Hoffercker contends that human creativity as well as higher order consciousness is a product of the superbrain He equates the subsequent growth of the mind with human history which began in Africa more than 50 000 years ago As anatomically modern humans spread across the globe adapting to a variety of climates and habitats they redesigned themselves technologically and created alternative realities through tools language and art Hoffercker connects the rise of civilization to a hierarchical reorganization of the super brain triggered by explosive population growth Subsequent human history reflects to varying degrees the suppression of the mind s creative powers by the rigid hierarchies of nationstates and empires constraining the further accumulation of knowledge The modern world emerged after 1200 from the fragments of the Roman Empire whose collapse had eliminated a central authority that could thwart innovation Hoffercker concludes with speculation about the possibility of artificial intelligence and the consequences of a mind liberated from its organic antecedents to exist in an independent nonbiological form **The British National**
