Global Marine Science and Carlsberg - The Golden Connections of Johannes Schmidt (1877-1933) Bo

Poulsen, 2016-11-21 By accident the world famous brewery Carlsberg became a central force in global marine science during the first three decades of the 20th century Within a core group of scientists and managers Johannes Schmidt 1877 1933 was the key figure combining the efforts of the International Council for the Exploration of the Sea ICES the Danish state and several private companies Launching 26 oceangoing expeditions Schmidt made landmark discoveries such as the breeding ground for the Atlantic eel in the Sargasso Sea The scientific frontier was pushed literally kilometres into the deep sea and across the World's oceans While the formal North Atlantic Empire of the small state of Denmark was in decline an informal empire of science was erected instead Shortlisted for the Society for Nautical Research Anderson Medal for published works on Maritime History in 2016

Wildlife, Conservation, and Conflict in Quebec, 1840-1914 Darcy Ingram, 2013-04-29 Despite the popular assumption that wildlife conservation is a recent phenomenon it emerged over a century and a half ago in an era more closely associated with wildlife depletion than preservation In *Wildlife Conservation and Conflict in Quebec* Darcy Ingram explores the combination of NGOs fish and game clubs and state administered leases that formed the basis of a unique system of wildlife conservation in North America Inspired by a longstanding belief in progress improvement and social order based on European as well as North American models this system effectively privatized Quebec's fish and game resources often to the detriment of commercial and subsistence hunters and fishers *The Romance of Science: Essays in Honour of Trevor H. Levere* Jed Buchwald, Larry Stewart, 2017-07-04 The *Romance of Science* pays tribute to the wide ranging and highly influential work of Trevor Levere historian of science and author of *Poetry Realised in Nature Transforming Matter Science and the Canadian Arctic Affinity and Matter* and other significant inquiries in the history of modern science Expanding on Levere's many themes and interests The *Romance of Science* assembles historians of science all influenced by Levere's work to explore such matters as the place and space of instruments in science the role and meaning of science museums poetry in nature chemical warfare and warfare in nature science in Canada and the Arctic Romanticism aesthetics and morals in natural philosophy and the dismal science of economics The *Romance of Science* explores the interactions between science's romantic material institutional and economic engagements with Nature [Handbook of the Historiography of the Earth and Environmental Sciences](#) Elena Aronova, David Sepkoski, Marco Tamborini, 2025-09-30 This open access handbook aims to provide a definitive assessment of the historiography and the future of major themes and approaches within the history of the earth sciences understood broadly The volume is intended for a broad range of readers including graduate students other scholars and scientists both familiar with and new to the history of the earth and environmental sciences Essays in the collection reflect on various problems in the study of the history of the earth sciences emphasizing crosscutting themes such as economics technology politics gender etc and featuring innovative ways of framing historiographic perspectives Since scholarship in the history of science is increasingly becoming entangled with environmental economic and bureaucratic political gender and other historical approaches the volume as a whole emphasizes the breadth and diversity of scholarship on the earth and environmental sciences **All the Fish in the Sea** Carmel Finley, 2011-08-22 Between 1949 and 1955 the State Department pushed for an international fisheries policy grounded in maximum sustainable yield MSY The concept is based on a confidence that scientists can predict theoretically the largest catch that can be taken from a species stock over an indefinite period And while it was modified in 1996 with passage of the Sustained Fisheries Act MSY is still at the heart of modern American fisheries management As fish populations continue to crash however it is clear that MSY is itself not sustainable Indeed the concept has been widely criticized by scientists for ignoring several key factors in fisheries management and has led to the devastating collapse of many fisheries Carmel Finley

reveals that the fallibility of MSY lies at its very inception as a tool of government rather than science. The foundational doctrine of MSY emerged at a time when the US government was using science to promote and transfer Western knowledge and technology and to ensure that American ships and planes would have free passage through the world's seas and skies. Finley charts the history of US fisheries science using MSY as her focus and in particular its application to halibut, tuna and salmon fisheries. Fish populations the world over are threatened and *All the Fish in the Sea* helps to sound warnings of the effect of any management policies divested from science itself.

Canadians and the Natural Environment to the Twenty-First Century Neil S. Forkey, 2012-06-20. *Canadians and the Natural Environment to the Twenty-First Century* provides an ideal foundation for undergraduates and general readers on the history of Canada's complex environmental issues. Through clear, easy-to-understand case studies, Neil Forkey integrates the ongoing interplay of humans and the natural world into national, continental and global contexts. Forkey's engaging survey addresses significant episodes from across the country over the past four hundred years: the classification of Canada's environments by its earliest inhabitants; the relationship between science and sentiment in the Victorian era; the shift towards conservation and preservation of resources in the early twentieth century; and the rise of environmentalism and issues involving First Nations at the end of the century. *Canadians and the Natural Environment to the Twenty-First Century* provides an accessible synthesis of the most important recent work in the field, making it a truly state-of-the-art contribution to Canadian environmental history.

The Fluid Envelope of our Planet Eric L. Mills, 2011-04-23. Oceans have had a mysterious allure for centuries, inspiring fears, myths and poetic imaginations. By the early twentieth century, however, scientists began to see oceans as physical phenomena that could be understood through mathematical geophysics. *The Fluid Envelope of Our Planet* explores the scientific developments from the early middle ages to the twentieth century that illuminated the once murky depths of oceanography. Tracing the transition from descriptive to mathematical analyses of the oceans, Eric Mills examines sailors and explorers' observations of the oceans; the influence of Scandinavian techniques on German-speaking geographers; and the eventual development of shared quantitative practices and ideas. A detailed and beautifully written account of the history of oceanography, *The Fluid Envelope of Our Planet* is also an engaging account of the emergence of a scientific discipline.

Science, Geopolitics and Culture in the Polar Region Sverker Sörlin, 2016-04-01. Throughout the twentieth century, glaciologists and geophysicists from Denmark, Norway and

Sweden made important scientific contributions across the Arctic and Antarctic. This research was of acute security and policy interest during the Cold War as knowledge of the polar regions assumed military importance. But scientists also helped make the polar regions Nordic spaces in a cultural and political sense with scientists from Norden punching far above their weight in terms of population, geographical size or economic activity. This volume presents an image of Norden that stretches far beyond its conventional limits covering a vast area in the North Atlantic and the Arctic Sea as well as parts of Antarctica. Rich in resources, scarce in population but critically important in global and regional geopolitics, these spaces were contested by major powers such as Russia, the United States, Canada and in the Antarctic, Argentina, Australia, South Africa and others. The empirical focus on Danish, Norwegian and Swedish influence in the polar regions during the twentieth century embraces a diverse array of themes from the role of science in policy and diplomacy to the tensions between nationalism and internationalism with clear relevance to the important role science plays in contemporary discussions about Nordic engagement with the polar regions.

Fisheries, Quota Management and Quota Transfer Gordon M. Winder, 2017-07-11. This volume examines the impact of fish stock assessment and catch share arrangements in context through case studies and in terms of ecosystem, economy and society. It examines the rationalizing work of bio-economic projects, especially the institutionalization of individual transferable quota (ITQ) in fisheries: what impact have they had on fisheries and fishers? The contributing authors understand ITQ and quota management as bio-economic projects that are as widely deployed but locally constituted projects that combine biological and economic logics to rationalize production and in this case, fish. Politicians and managers use these projects and the models that justify them to rationalize fisheries in favor of modern technology and for capital and species efficiency. Aimed at a diverse interdisciplinary fisheries management readership and designed as a guide to issues emerging in any assessment of ITQ, the book is a timely investigation of the origins and diverse experiences of ITQ projects including resistance to them, attempts to develop fisheries management around them and experiences of the risks that come with them. Now around forty years old, ITQ has never been subject to the kind of comprehensive sustainability assessments once advocated by Elinor Ostrom, let alone the full cost accounting of impacts at the national level that Evelyn Pinkerton recently called for. **Fisheries, Quota Management and Quota Transfer** offers multi-disciplinary assessments of the effects of ITQ from scholars working in eight countries. The book brings together scholars from anthropology, economics, geography, sociology, the history of science and marine environmental history to discuss experiences from fisheries in eight industrialized countries. It considers cases from outside as well as inside the EU including ITQ pioneers New Zealand and Iceland. The combination allows for an unprecedented international perspective on stock assessments and share allocation systems. By emphasizing emerging, becoming, learning and transforming through knowledge, the book conceives technology as a field of power and choice, nevertheless dominated by managers through specific projects in specific contexts. Individual chapters relate bio-economic projects to separate theoretical literature and

approach that facilitates multi disciplinary dialog Perspectives on Oceans Past Kathleen Schwerdtner Máñez,Bo Poulsen,2016-05-24 Marine environmental history analyses the changing relationships between human societies and marine natural resources over time This is the first book which deals in a systematic way with the theoretical backgrounds of this discipline Major theories and methods are introduced by leading scholars of the field The book seeks to encapsulate some of the major novelties of this fascinating new discipline and its contribution to the management conservation and restoration of marine and coastal ecosystems as well as the cultural heritages of coastal communities in different parts of the world
