Shared Earth Modeling Michel Perrin,Jean-François Rainaud,2013 Over the last two decades earth modeling has become a major investigative tool for evaluating the potential of hydrocarbon reservoirs Earth modelling must now face new challenges since petroleum exploration no longer consists in only investigating newly identified resources but also in re evaluating the potential of previously investigated reservoirs in the light of new prospecting data and of revised interpretations Earth models incorporate a variety of different interpretations made on various types of data at successive steps of the modeling process

However current modeling procedures provide no way to link a range of data and interpretations with a final earth model For this reason sharing and exchanging information about the model building process is at present a major difficulty Recently the term Shared Earth Modeling has been used for expressing the idea that earth models should be built in such a way that experts and end users can have access at any time to all the information incorporated into the model This information does not only concern the data but also the knowledge that geoscientists produce by interpreting these data Accordingly practical solutions must be studied for operating a knowledge driven approach of Shared Earth Modeling This is the goal of this book This study of earth subsurface modeling is intended for several categories of readers It concerns in the first place geologists engineers and managers involved in the study and evaluation of subsurface reservoirs and hydrocarbon exploration Relying on recent progress in various fields of computer sciences the authors present innovative solutions for solving the critical issue of knowledge exchange at key steps of the modeling process This book will also be of interest to researchers in computer science and more generally to engineers researchers and students who wish to apply advanced knowledge based techniques to complex engineering problems Contents Part I Earth Models 1 Earth models as subsurface representations 2 Earth models for underground resource exploration and estimation 3 Earth models used in petroleum industry current practice and future challenges Part II Knowledge oriented solutions 4 Knowledge based approach of a data intensive problem seismic interpretation 5 Individual surface representations and optimization 6 Geological surface assemblage 7 3D Meshes for structural stratigraphy and reservoir frameworks 8 The data extension issue geological constraints applied in geostatistical processes Part III Knowledge formalization 9 Ontologies and their use for geological knowledge formalization 10 Ontologies for Interpreting geochronological relationships 11 Building ontologies for analyzing data expressed in natural language 12 Ontology based rock description and interpretation Part IV Knowledge management applications 13 Ontology integration and management within data intensive engineering systems 14 Earth modeling using web services 15 Full scale example of a knowledge based method for building and managing an earth model Part V Conclusion Appendix Glossary
