Wheelchair Mobility Assessment Tool:

The Wheelchair Evaluation Mitchell Batavia, 2010-10-22 The Wheelchair Evaluation A Clinician's Guide Second Edition is an updated practical and concise reference on the wheelchair prescription process. It is perfect for students and clinicians in the health fields who work with physically disabled individuals in need of a wheelchair. This book is a portable hands-on manual that implements a real world approach to patient evaluation, choice of wheelchair components, documentation, and funding. New to this Edition: Four new chapters dedicated to ethical issues, funding, documentation, and fitting; A Medicare algorithm for wheelchair clinical decision making; Information on American National Standards Institute (ANSI) and Rehabilitation Engineering Assistive Technology Society of North America (RESNA) wheelchair standards that is useful in comparison shopping; New PowerPoint slides with videos. Free with every book: a CD of chapter-by-chapter PowerPoint slides with videos. Content available under the Samples tab above. In order to view video content within this presentation, save the file to your desktop. Then right-click on the file and select 'extract all' before opening. 2010 276 pages **Computer**

Simulation as an Assessment Tool for Power Wheelchair Mobility Daryl Austern, 1991 Measuring Spinal Cord Injury Giovanni Galeoto, Anna Berardi, Marco Tofani, Maria Auxiliadora Marquez, 2021-04-07 This book describes validated outcome measures for the international Spinal Cord Injury population. Based on rigorous systematic reviews of ca. 80,000 scientific articles, the authors present assessment tools for various clinical uses in the health sciences following parameters of validity, reliability, and responsiveness. It is important for the development of clinical practice and research that practical and appropriate measures become universally accepted; this would allow comparisons and meta-analysis of high quality randomized controlled trials of people with this increasingly common injury. This book emphasizes the need for consensus among researchers as to which tools must be studied in depth or adapted to other national contexts or which measurement instruments should be standardized in order to develop universal norms and standards for the performance of people with Spinal Cord Injury. It offers a valuable practical guide for clinicians, rehabilitation professionals, and nurses but will also help researchers to gain more confidence in using valid and reliable assessment tools for comparable clinical trials. The Promise of Assistive Technology to Enhance Activity and Work Participation National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Health Care Services, Committee on the Use of Selected Assistive Products and Technologies in Eliminating or Reducing the Effects of Impairments, 2017-09-01 The U.S. Census Bureau has reported that 56.7 million Americans had some type of disability in 2010, which represents 18.7 percent of the civilian noninstitutionalized population included in the 2010 Survey of Income and Program Participation. The U.S. Social Security Administration (SSA) provides disability benefits through the Social Security Disability Insurance (SSDI) program and the Supplemental Security Income (SSI) program. As of December 2015, approximately 11 million individuals were SSDI beneficiaries and about 8 million were SSI beneficiaries. SSA currently considers assistive devices in the nonmedical and

medical areas of its program guidelines During determinations of substantial gainful activity and income eligibility for SSI benefits the reasonable cost of items devices or services applicants need to enable them to work with their impairment is subtracted from eligible earnings even if those items or services are used for activities of daily living in addition to work In addition SSA considers assistive devices in its medical disability determination process and assessment of work capacity The Promise of Assistive Technology to Enhance Activity and Work Participation provides an analysis of selected assistive products and technologies including wheeled and seated mobility devices upper extremity prostheses and products and technologies selected by the committee that pertain to hearing and to communication and speech in adults
