Consultancy for the

Production of Supplementary Educational Materials

Summary

UNESCO seeks the services of a team of consultants to produce educational materials for use in schools on menstrual hygiene management (MHM), early, child and forced marriage (ECFM) and school-related gender-based violence (SRGBV). The team of consultants will work with UNESCO and the Ministry of Education, Science and Technology (MoEST) to develop, design and layout age- and culturally appropriate materials for primary and secondary schools.

Background

In March 2018, UNESCO Regional Office of Southern Africa launched a project titled 'Our Rights, Our lives, Our Future' which seeks to improve sexual and reproductive health (SRH), gender and education outcomes for adolescents and young people in the Sub-Saharan Africa region through sustained reductions in new HIV/STI infections, early and unintended pregnancy and gender-based violence. The project supports delivery of good quality comprehensive sexuality education (CSE) that empowers adolescents and young people, and builds agency while developing the skills, knowledge, attitudes and competencies required for preventing HIV, reducing early and unintended pregnancies and eliminating gender based violence. The project has four main objectives designed to contribute to the effective strengthening of sexuality education programmes:

- a) Secure and sustain strong political commitment and support for adolescents and young people's access to comprehensive sexuality education and sexual and reproductive health services across Sub-Saharan Africa.
- b) Support the delivery of accurate, rights-based and good quality comprehensive sexuality education programmes that provide knowledge, values and skills essential for safer behaviours, reduced adolescent pregnancy, and gender equality
- c) Ensure that schools and community environments are safer, healthier and inclusive for all young people
- d) Strengthen the evidence base on CSE and safer school environments

The programme follows a 3-tier system with programme acceleration countries at the top followed by focus countries and then networking countries. This 3-tier system will allow countries to learn from each other as they work towards national coverage. Institutionalizing the CSE programs will ensure governments provide domestic funding and contribute to fully scaled-up CSE interventions. Malawi became a programme acceleration country in 2019.

UNESCO is currently supporting Malawi's MoEST to implement the Our Rights, Our Lives, Our Future (O3) Programme with support from the Swedish International Development Cooperation Agency (Sida) and Norway. The programme is aimed at reaching 3.7 million learners in primary and secondary schools.

Classics of Social Choice Iain McLean, Arnold B. Urken, Fiona Hewitt, 1995 Over the centuries an intriguing collection of thinkers have realized that voting and social choice are not straightforward Yet despite the work of many distinguished contributors in this area the subject has only become established in the last few decades Indeed many earlier writings were lost and their content forgotten only to be rediscovered later and then forgotten again This puzzling saga of intellectual history unfolds in *Classics of Social Choice* through these original writings The editors have included recently discovered pieces and other major contributions newly translated where necessary The introduction explains who each writer was locates him in a historical context and analyzes his argument It was only in the 1940s and 1950s that the theory of social choice was established by Duncan Black and Kenneth Arrow whose Nobel Prize in Economics was awarded in part for this work It is now a large and thriving branch of economics and politics *Classics of Social Choice* will interest anyone working in social choice theory as well as students of medieval thought the Enlightenment and constitutions

Logical Modeling of Cellular Processes: From Software Development to Network Dynamics Matteo Barberis, Tomáš Helikar, 2019-08-16 Mathematical models have become invaluable tools for understanding the intricate dynamic behavior of complex biochemical and biological systems Among computational strategies logical modeling has been recently gaining interest as an alternative approach to address network dynamics Due to its advantages including scalability and independence of kinetic parameters the logical modeling framework is becoming increasingly popular to study the dynamics of highly interconnected systems such as cell cycle progression T cell differentiation and gene regulation Novel tools and standards have been developed to increase the interoperability of logical models which can now be employ to respond a variety of biological questions This Research Topic brings together the most recent and cutting edge approaches in the area of logical modeling including among others novel biological applications software development and model analysis techniques

Many micronutrients vitamins and minerals have clearly identified roles in supporting the function of cells of the immune system People with micronutrient deficiencies often have immune impairments and are susceptible to infections and to infections being severe even fatal In such individuals micronutrient supplements can reverse immune impairments and reduce the risk of infections Nevertheless the relationships between micronutrient status immunity and infection are complex some micronutrients that are required by the immune system such as iron can also increase the risk of certain infections probably because those micronutrients favor pathogen growth and survival Furthermore the acute phase response to infections alters micronutrient metabolism This makes understanding of the relationship between micronutrient status and infection more complicated COVID 19 increased interest in micronutrients including vitamins C and D and zinc amongst others in the context of immunity and infection but the findings of different studies have been inconsistent highlighting the complexity of this field This Research Topic welcomes manuscript submissions on micronutrients immunity and infection These may be mechanistic studies conducted in controlled settings such as in cell culture or experimental animals human epidemiological studies and trials in human participants and patients evaluating relationships between micronutrient exposure immune outcomes and infection and the underlying mechanisms **Bonding, Bridging, and Bypassing** Colm A.

Fox,2024 Societal divisions and even violence can occur when electoral candidates appeal to race religion or tribe Why do candidates make these ethnic appeals More specifically why do some candidates appeal to their own ethnic group while others reach out to other ethnic groups or abandon ethnic appeals altogether To answer this question Colm A Fox adopted a ground breaking novel approach to study campaign appeals made by thousands of candidates He collected and systematically analyzed photographs of over 25 000 election posters from campaigns across Indonesia along with newspaper reports and interview data The book shows how electoral rules political party ideology ethnic demographics and social norms shape candidates decisions to bond with co ethnics bridge across other ethnic groups or bypass ethnicity entirely Its findings yield not only insights as to which ethnic identities are likely to become politicized but also prescriptions on how to curb divisive ethnic politics *The Tablet* ,1878 *Proceedings of the Parliament of South Australia* South Australia. The Voynich Manuscript as an Example of Oligo-Agglutinative Pasigraphy, Vol. I: A Fuzzy Set Approach to Decryption Steve Bolton, Class III problems are considered practically unsolvable in cryptology but none has resisted cryptanalytic attack as persistently as the Voynich Manuscript In the first installment of this 4 volume set we present the linguistic and affix analysis that preceded the first complete but approximate translation of the entire manuscript This contrasts with the piecemeal approach of all prior solutions that resulted in wildly divergent translations of minuscule selections of the text This systemic attack on the entirety of the text and its unusual distributional features such as extreme platykurtia which forbid translation into any natural language resulted first in superior transcription stability and an equally stable symbol set based on intensive statistical analysis The encoding scheme employs a 20 22 letter alphabetic script that most closely resembles a
