These two volumes consisting of Foundations and Applications provide the current status of theoretical and empirical developments in computing with words In philosophy the twentieth century is said to be the century of language This is mainly due to Wittgenstein who said The meaning of a word is its use in the language game The concept game is a concept with blurred edges In the first phrase the language game implies the everyday human activity with language and in the latter game simply implies an ordinary word Thus Wittgenstein precisely stated that a word is fuzzy in real life Unfortunately this idea about a word was not accepted in the conventional science We had to wait for Zadeh's fuzzy sets theory Remembering Wittgenstein's statement we should consider on the one hand the concept of computing with words from a philosophical point of view It deeply relates to the everyday use of a word in which the meaning of a word is fuzzy in its nature
