Station Model Lab

At commercial airports throughout the country the weather is observed, measured and recorded. In New York State alone there are over a dozen observation sites. These stations record: temperature, dew point, cloud cover, visibility, height of cloud base, amount of precipitation, wind speed and wind direction to name a few. The measurements made every hour at every station around the world. This is a very large amount of data, which can be very useful in predicting the weather.

The challenge is that a large amount of data needs to be communicated

to every weather station in the US. Because of the lack of space on weather maps, the weather information needs to be coded. In order to do this the information needs to be highly organized and standard throughout country. By using station models the data can be represented by a symbol or number, and it's meaning is easily understood by where the symbol or number is placed on the station model.

Through this lab you will learn to understand station models used in meteorology by coding and decoding a variety of stations.

Science teachers come in many varieties but they share a common goal to nurture learners Over the past decade we have learned a great deal about how to do this effectively Of all this new and some not so new knowledge what strikes me as most important is that learning occurs best within a context Still as obvious as that may seem it is relatively rare in our high school science classrooms The problem of course is that it is not easy to create a learning experience with hands on relevance to the science under discussion Science teachers in addition to not having the the time for the most part do not have the expertise or readily available resources The solution lies in finding ways to bring scientists into the teaching learning equation Scientists teamed with teachers and their students represent a very real and rich opportunity to involve students in real science as practiced Imagine a research book that gives examples of honest science research experiences for science oriented students What s more imagine a book that includes examples where students are collaborating with scientists from all over the world on research projects in person or via the Internet Internet Linksfor Science Education does just that It explores the role of the Internet and technol ogy in working student scientist partnerships **1975 NASA Authorization**
