## **Global Marine Science and Carlsberg - The Golden Connections of Johannes Schmidt (1877-1933)** Bo

Poulsen, 2016-11-21 By accident the world famous brewery Carlsberg became a central force in global marine science during the first three decades of the 20th century Within a core group of scientists and managers Johannes Schmidt 1877 1933 was the key figure combining the efforts of the International Council for the Exploration of the Sea ICES the Danish state and several private companies Launching 26 oceangoing expeditions Schmidt made landmark discoveries such as the breeding ground for the Atlantic eel in the Sargasso Sea The scientific frontier was pushed literally kilometres into the deep sea and across the World's oceans While the formal North Atlantic Empire of the small state of Denmark was in decline an informal empire of science was erected instead Shortlisted for the Society for Nautical Research Anderson Medal for published works on Maritime History in 2016

**Wildlife, Conservation, and Conflict in Quebec, 1840-1914** Darcy Ingram, 2013-04-29 Despite the popular assumption that wildlife conservation is a recent phenomenon it emerged over a century and a half ago in an era more closely associated with wildlife depletion than preservation In *Wildlife Conservation and Conflict in Quebec* Darcy Ingram explores the combination of NGOs fish and game clubs and state administered leases that formed the basis of a unique system of wildlife conservation in North America Inspired by a longstanding belief in progress improvement and social order based on European as well as North American models this system effectively privatized Quebec's fish and game resources often to the detriment of commercial and subsistence hunters and fishers *The Romance of Science: Essays in Honour of Trevor H. reveals that the fallibility of MSY lies at its very inception as a tool of government rather than science. The foundational doctrine of MSY emerged at a time when the US government was using science to promote and transfer Western knowledge and technology and to ensure that American ships and planes would have free passage through the world's seas and skies. Finley charts the history of US fisheries science using MSY as her focus and in particular its application to halibut, tuna, and salmon fisheries. Fish populations the world over are threatened and *All the Fish in the Sea* helps to sound warnings of the effect of any management policies divested from science itself.

Canadians and the Natural Environment to the Twenty-First Century Neil S. Forkey, 2012-06-20. *Canadians and the Natural Environment to the Twenty-First Century* provides an ideal foundation for undergraduates and general readers on the history of Canada's complex environmental issues. Through clear, easy-to-understand case studies, Neil Forkey integrates the ongoing interplay of humans and the natural world into national, continental, and global contexts. Forkey's engaging survey addresses significant episodes from across the country over the past four hundred years: the classification of Canada's environments by its earliest inhabitants; the relationship between science and sentiment in the Victorian era; the shift towards conservation and preservation of resources in the early twentieth century; and the rise of environmentalism and issues involving First Nations at the end of the century. *Canadians and the Natural Environment to the Twenty-First Century* provides an accessible synthesis of the most important recent work in the field, making it a truly state-of-the-art contribution to Canadian environmental history.

The Fluid Envelope of our Planet Eric L. Mills, 2011-04-23. Oceans have had a mysterious allure for centuries, inspiring fears, myths, and poetic imaginations. By the early twentieth century, however, scientists began to see oceans as physical phenomena that could be understood through mathematical geophysics. *The Fluid Envelope of Our Planet* explores the scientific developments from the early middle ages to the twentieth century that illuminated the once murky depths of oceanography. Tracing the transition from descriptive to mathematical analyses of the oceans, Eric Mills examines sailors and explorers' observations of the oceans; the influence of Scandinavian techniques on German-speaking geographers; and the eventual development of shared quantitative practices and ideas. A detailed and beautifully written account of the history of oceanography, *The Fluid Envelope of Our Planet* is also an engaging account of the emergence of a scientific discipline.

Science, Geopolitics and Culture in the Polar Region Sverker Sörlin, 2016-04-01. Throughout the twentieth century, glaciologists and geophysicists from Denmark, Norway, and

Sweden made important scientific contributions across the Arctic and Antarctic. This research was of acute security and policy interest during the Cold War as knowledge of the polar regions assumed military importance. But scientists also helped make the polar regions Nordic spaces in a cultural and political sense with scientists from Norden punching far above their weight in terms of population, geographical size or economic activity. This volume presents an image of Norden that stretches far beyond its conventional limits, covering a vast area in the North Atlantic and the Arctic Sea as well as parts of Antarctica. Rich in resources, scarce in population but critically important in global and regional geopolitics, these spaces were contested by major powers such as Russia, the United States, Canada and in the Antarctic, Argentina, Australia, South Africa and others. The empirical focus on Danish, Norwegian and Swedish influence in the polar regions during the twentieth century embraces a diverse array of themes from the role of science in policy and diplomacy to the tensions between nationalism and internationalism with clear relevance to the important role science plays in contemporary discussions about Nordic engagement with the polar regions.

### **Fisheries, Quota Management and Quota Transfer** Gordon M.

Winder, 2017-07-11. This volume examines the impact of fish stock assessment and catch share arrangements in context through case studies and in terms of ecosystem, economy and society. It examines the rationalizing work of bio-economic projects, especially the institutionalization of individual transferable quota (ITQ) in fisheries: what impact have they had on fisheries and fishers? The contributing authors understand ITQ and quota management as bio-economic projects that are as widely deployed but locally constituted projects that combine biological and economic logics to rationalize production and in this case, fish. Politicians and managers use these projects and the models that justify them to rationalize fisheries in favor of modern technology and for capital and species efficiency. Aimed at a diverse interdisciplinary fisheries management readership and designed as a guide to issues emerging in any assessment of ITQ, the book is a timely investigation of the origins and diverse experiences of ITQ projects, including resistance to them, attempts to develop fisheries management around them and experiences of the risks that come with them. Now around forty years old, ITQ has never been subject to the kind of comprehensive sustainability assessments once advocated by Elinor Ostrom, let alone the full cost accounting of impacts at the national level that Evelyn Pinkerton recently called for. **Fisheries, Quota Management and Quota Transfer** offers multi-disciplinary assessments of the effects of ITQ from scholars working in eight countries. The book brings together scholars from anthropology, economics, geography, sociology, the history of science and marine environmental history to discuss experiences from fisheries in eight industrialized countries. It considers cases from outside as well as inside the EU, including ITQ pioneers New Zealand and Iceland. The combination allows for an unprecedented international perspective on stock assessments and share allocation systems. By emphasizing emerging, becoming, learning and transforming through knowledge, the book conceives technology as a field of power and choice, nevertheless dominated by managers through specific projects in specific contexts. Individual chapters relate bio-economic projects to separate theoretical literature and

approach that facilitates multi disciplinary dialog     Perspectives on Oceans Past Kathleen Schwerdtner Máñez,Bo Poulsen,2016-05-24 Marine environmental history analyses the changing relationships between human societies and marine natural resources over time This is the first book which deals in a systematic way with the theoretical backgrounds of this discipline Major theories and methods are introduced by leading scholars of the field The book seeks to encapsulate some of the major novelties of this fascinating new discipline and its contribution to the management conservation and restoration of marine and coastal ecosystems as well as the cultural heritages of coastal communities in different parts of the world

4866 7      **Managed Annihilation** Dean Bavington,2011-01-01 The commercial cod fishery in Newfoundland and Labrador was once the most successful fishery in the world When it collapsed in 1992 causing the largest single day layoff in Canadian history and irrevocable ecological damage fishermen scholars and scientists pointed to failures in management such as uncontrolled harvesting as likely culprits Examining the history of commercial cod fisheries in the region from the mid nineteenth century Managed Annihilation makes the case that the very idea of natural resource management caused the death of the cod The collapse occurred when the fisheries were ostensibly managed by the state and the fishery has still not recovered nearly two decades later Although the collapse raised doubts among policy makers about their ability to understand predict and control nature their ultimate goal of control through management has not wavered it has simply been transferred onto new targets      *Histories of Technology, the Environment and Modern Britain* Jon Agar,Jacob Ward,2018-04-09 Histories of Technology the Environment and Modern Britain brings together historians with a wide range of interests to take a uniquely wide lens view of how technology and the environment have been intimately and irreversibly entangled in Britain over the last 300 years It combines for the first time two perspectives with much to say about Britain since the industrial revolution the history of technology and environmental history Technologies are modified environments just as nature is to varying extents engineered Furthermore technologies and our living and non living environment are both predominant material forms of organisation and self organisation that surround and make us Both have changed over time in intersecting ways Technologies discussed in the collection include bulldozers submarine cables automobiles flood barriers medical devices museum displays and biotechnologies Environments investigated include bogs cities farms places of natural beauty and pollution land and sea The book explores this diversity but also offers an integrated framework for understanding these intersections
