A Theory Of Content And Other Essays Representation And Mind Series:

A Theory of Content and Other Essays Jerry A. Fodor, 1990 This collection of new and previously published essays reflects the major research and thought of one of today's preeminent philosophers of mind. The first seven essays are philosophical pieces that focus on mental representation and the foundations of intentionality; these are followed by four psychological essays on cognitive architecture. In his eloquent introduction, Fodor shows how the two areas are thematically united and epistemologically related, highlighting his concern in finding alternatives to holistic accounts of mental content. Fodor's philosophical essays develop an informational view of semantics that offers the possibility of atomism about meaning; his psychological essays present a modular view of cognitive architecture that offers the possibility of atomism about perception. These ideas, he points out, are joined in epistemology in way that the book's last essay begins to explore. Taken together, the essays represent Fodor's lively attempt to knock the underpinnings from the currently popular relativism to show that the arguments for semantic and psychological holism are insubstantial and that important alternatives exist to be explored. Jerry A. Fodor is Professor of Philosophy at Rutgers University and at the City University of New York Graduate Center. A Bradford Book. *Representation in Mind* Hugh Clapin, Phillip Staines, Peter Slezak, 2004-06-04 *Representation in Mind* is the first book in the new series *Perspectives on Cognitive Science* and includes well-known contributors in the areas of philosophy of mind, psychology, and cognitive science. The papers in this volume offer new ideas, fresh approaches, and new criticisms of old ideas. The papers deal in new ways with fundamental questions concerning the problem of mental representation that one contributor, Robert Cummins, has described as THE problem in philosophy of mind for some time now. The editors' introductory overview considers the problem for which mental representation has been seen as an answer, sketching an influential framework, outlining some of the issues addressed, and then providing an overview of the papers. Issues include the relation between mental representation and public/non-mental representation, misrepresentation, the role of mental representations in intelligent action, the relation between representation and consciousness, the relation between folk psychology and explanations invoking mental representations. Direct Belief Jonathan Berg, 2012-04-26 Jonathan Berg argues for the Theory of Direct Belief, which treats having a belief about an individual as an unmediated relation between the believer and the individual the belief is about. After a critical review of alternative positions, Berg uses Grice's theory of conversational implicature to provide a detailed pragmatic account of substitution failure in belief ascriptions and goes on to defend this view against objections, including those based on an unwarranted Inner Speech Picture of Thought. The work serves as a case study in pragmatic explanation, dealing also with methodological issues about context sensitivity in language and the relation between semantics and pragmatics. The Cambridge Handbook of Situated Cognition Philip Robbins, Murat Aydede, 2009 This book is a guide to a movement in cognitive science showing how environmental and bodily structure shapes cognition. **Neural Machines: A Defense of Non-Representationalism in Cognitive Neuroscience**

Matej Kohár,2023-03-09 In this book Matej Kohar demonstrates how the new mechanistic account of explanation can be used to support a non representationalist view of explanations in cognitive neuroscience and therefore can bring new conceptual tools to the non representationalist arsenal Kohar focuses on the explanatory relevance of representational content in constitutive mechanistic explanations typical in cognitive neuroscience The work significantly contributes to two areas of literature 1 the debate between representationalism and non representationalism and 2 the literature on mechanistic explanation Kohar begins with an introduction to the mechanistic theory of explanation focusing on the analysis of mechanistic constitution as the basis of explanatory relevance in constitutive mechanistic explanation He argues that any viable analysis of representational contents implies that content is not constitutively relevant to cognitive phenomena The author also addresses objections against his argument and concludes with an examination of the consequences of his account for both traditional cognitive neuroscience and non representationalist alternatives This book is of interest to readers in philosophy of mind cognitive science and neuroscience

What are Mental Representations? Joulia

Smortchkova,Krzysztof Dołęga,Tobias Schlicht,2020-12-03 The topic of this book is mental representation a theoretical concept that lies at the core of cognitive science Together with the idea that thinking is analogous to computational processing this concept is responsible for the cognitive turn in the sciences of the mind and brain since the 1950s Conceiving of cognitive processes such as perception reasoning and motor control as consisting of the manipulation of contentful vehicles that represent the world has led to tremendous empirical advancements in our explanations of behaviour Perhaps the most famous discovery that explains behavior by appealing to the notion of mental representations was the discovery of place cells that underlie spatial navigation and positioning which earned researchers John O Keefe May Britt Moser and Edvard I Moser a joint Nobel Prize in 2014 And yet despite the empirical importance of the concept there is no agreed definition or theoretical understanding of mental representation This book constitutes a state of the art overview on the topic of mental representation assembling some of the leading experts in the field and allowing them to engage in meaningful exchanges over some of the most contentious questions The collection gathers both proponents and critics of the notion making room for debates dealing with the theoretical and ontological status of representations the possibility of formulating a general account of mental representation which would fit our best explanatory practices and the possibility of delivering such an account in fully naturalistic terms Some contributors explore the relation between mutually incompatible notions of mental representation stemming from the different disciplines composing the cognitive sciences such as neuroscience psychology and computer science Others question the ontological status and explanatory usefulness of the notion And finally some try to sketch a general theory of mental representations that could face the challenges outlined in the more critical chapters of the volume
