Globalisation and Education Policy Reform in Botswana Richard Tabulawa, 2023-07-21 This book uses the global local dialect approach to explicate education policy reform in Botswana and interrogates the practical effects of the various education policies on curriculum pedagogy and governance of the Botswana General Education system Considering the effect of three reform policies since Botswana's Independence in 1966 the book evaluates the performance of each of the policies and examines their consequences in terms of the interplay of global forces and domestic pressures The result of this interplay has been an education landscape that while reflecting globally circulating education discourses markedly differs from those same discourses The book argues that the State in Botswana has appropriated education policy to legitimate itself in times of crisis and that each policy has improved access to general education but collectively have failed to improve its quality making suggestions for how this can be improved in the future As the first book of its kind to delve into education in Botswana from a single authored critical lens the book will be a highly relevant reading for academics researchers and post graduate students of African education comparative education education policy and curriculum studies

Current Challenges in Cardiovascular Molecular Diagnostics

Matteo Vatta, Valeria Novelli, Luisa Mestroni, Jeffrey A. Towbin, Carlo Napolitano, Guia Guffanti, 2017-09-12 The field of cardiovascular genetics has tremendously benefited from the recent application of massive parallel sequencing technology also referred to as next generation sequencing NGS However along with the discovery of additional genes associated with human cardiac diseases the analysis of large dataset of genetic information uncovered a much more complex and variegated landscape which often departs from the comfort zone of the monogenic Mendelian diseases image that clinical molecular geneticists have been well acquainted with for many decades It is now clear that in addition to highly penetrant genetic variants which in isolation are able to recapitulate the full clinical presentation when expressed in animal models we are now aware that a small but significant fraction of subjects presenting with cardiac muscle diseases such as cardiomyopathies or primary arrhythmias such as long QT syndrome LQTS may harbor at least two deleterious variants in the same gene compound heterozygous or in different gene double heterozygous Although the clinical presentation in subjects with more than one deleterious variant appears to be more severe and with an earlier disease onset it somehow changes the viewpoint of clinical molecular geneticists whose aim

is to identify all possible genetic contributors to a human condition In this light the employment in clinical diagnostics of the NGS technology allowing the simultaneous interrogation of a DNA target spanning from large panel of genes up to the entire genome will definitely aid at uncovering all such contributors which will have to be tested functionally to confirm their role in human cardiac conditions The uncovering of all clinically relevant deleterious changes associated with a cardiovascular disease would probably increase our understanding of the clinical variability commonly occurring among affected family relatives and potentially provide with unexpected therapeutic targets for the treatment of symptoms related to the presence of accessory deleterious genetic variants other than the key molecular culprit The objective of this Research Topic is to explore the current challenges presenting to the cardiovascular genetics providers such as clinical geneticists genetic counselors clinical molecular geneticists and molecular pathologists involved in the diagnosis counseling testing and interpretation of genetic tests results for the comprehensive management of patients affected by cardiovascular genetic disorders

Proceedings of the 7th International Conference on the Applications of Science and Mathematics 2021 Aida Binti

Mustapha,Suhadir Shamsuddin,Syed Zuhair Haider Rizvi,Saliza Binti Asman,Siti Suhana Jamaian,2022-06-28 This book presents peer reviewed articles and recent advances on the potential applications of Science and Mathematics for future technologies from the 7th International Conference on the Applications of Science and Mathematics SCIEMATHIC 2021 held in Malaysia It provides an insight about the leading trends in sustainable Science and Technology The world is looking for sustainable solutions to problems more than ever The synergistic approach of mathematicians scientists and engineers has undeniable importance for future technologies With this viewpoint SCIEMATHIC 2021 has the theme Quest for Sustainable Science and Mathematics for Future Technologies The conference brings together physicists mathematicians statisticians and data scientists providing a platform to find sustainable solutions to major problems around us The works presented here

are suitable for professionals and researchers globally in making the world a better and sustainable place Health Monitoring Systems Rajarshi Gupta,Dwaipayan Biswas,2019-11-21 Remote health monitoring using wearable sensors is an important research area involving several key steps physiological parameter sensing and data acquisition data analysis data security data transmission to caregivers and clinical intervention all of which play a significant role to form a closed loop system Subject specific behavioral and clinical traits coupled with individual physiological differences necessitate a personalized healthcare delivery model for around the clock monitoring within the home environment Cardiovascular disease monitoring is an illustrative application domain where research has been instrumental in enabling a personalized closed loop monitoring system which has been showcased in this book Health Monitoring Systems An Enabling Technology for Patient Care provides a holistic overview of state of the art monitoring systems facilitated by Internet of Things IoT technology The book lists out the details on biomedical signal acquisition processing and data security the fundamental building blocks towards an ambulatory health monitoring infrastructure The fundamentals have been complimented with other relevant topics including applications which provide an in depth view on remote health monitoring systems Key Features Presents examples of state of the art health monitoring systems using IoT infrastructure Covers the full spectrum of physiological sensing data acquisition processing and data security Provides relevant example applications demonstrating the benefits of technological advancements aiding disease prognosis This book serves as a beginner s guide for engineering students of electrical and computer science practicing engineers researchers and scientists who are interested in having an overview of pervasive health monitoring systems using body worn sensors operating outside the hospital environment It could also be recommended as a reference for a graduate or master s level course on biomedical instrumentation and signal processing

Textbook of Catheter-Based Cardiovascular Interventions Peter Lanzer,2018-04-30 This book is a fully updated and revised second edition of a highly successful text in which a new concept of knowledge mining based on explication and transfer of interventional knowledge of experts has been implemented The dedicated training program that is set out will serve the needs of all interventional operators whether cardiologists vascular surgeons vascular specialists or radiologists enabling them to achieve a consistent expert level across the entire broad spectrum of catheter based interventions Operator skills and in particular decision making and strategic skills are the most critical factors for the outcome of catheter based cardiovascular interventions Currently such skills are commonly developed by the empirical trial and error method only The explicit teaching training and learning approach adopted in this book permits the rapid transfer of interventional knowledge and enables individual operators to negotiate steep learning curves and acquire complex skills in a highly efficient manner It will thereby offer invaluable assistance in meeting successfully the challenges of modern cardiovascular care Current Problems in Applied Mathematics and Computer Science and Systems Anatoly Alikhanov,Pavel Lyakhov,Irina Samoylenko,2023-06-05 This book is based on the best papers accepted for presentation during the International Conference

on Actual Problems of Applied Mathematics and Computer Systems APAMCS 2022 Russia The book includes research materials on modern mathematical problems solutions in the field of scientific computing data analysis and modular computing The scope of numerical methods in scientific computing presents original research including mathematical models and software implementations related to the following topics numerical methods in scientific computing solving optimization problems methods for approximating functions etc The studies in data analysis and modular computing include contributions in the field of deep learning neural networks mathematical statistics machine learning methods residue number system and artificial intelligence Finally the book gives insights into the fundamental problems in mathematics education The book intends for readership specializing in the field of scientific computing parallel computing computer technology machine learning information security and mathematical education
