Mathematical Competencies in the Digital Era Uffe Thomas Jankvist, Eirini Geraniou, 2023-02-20 This book focuses on the potential interplay between two distinct yet related paradigm shifts in mathematics education drawing on the notion of networking of theories through illustrative case studies from the Danish educational system and beyond The first paradigm shift is the massive introduction of digital technology in the teaching and learning of the subject the second is a shift from the traditional focusing on mastering of skills and knowledge to being concerned with the possession and development of mathematical competencies This book builds on the Danish KOM Competencies and the Learning of Mathematics project which sources its description of mathematical mastery primarily on the notion of a mathematical competency rather than on lists of topics concepts and results This allows for an overarching framework which captures the perspectives of mathematics teaching and learning at whichever educational level While the KOM framework does not in detail address the role of digital technologies in relation to its description of different types of mathematical competencies etc the chapters of this book set out to do exactly this while in the process also drawing on a selection of other theoretical constructs and frameworks from mathematics education research Starting with introductory chapters by key researchers in the area the book brings forth chapters for each of the KOM framework's eight mathematical

competencies authored by Nordic researchers in combination with international scholars The KOM framework also operates with three types of overview and judgement which are specifically addressed in relation to the role of digital technologies in the third part of the book The fourth and final part of the book broadens the scene and provides chapters of a more perspective nature in relation to mathematical competencies in the digital era The book's preface is by Susanne Prediger

PISA PISA 2012 Results: What Students Know and Can Do (Volume I, Revised edition, February 2014) Student Performance in Mathematics, Reading and Science OECD,2014-02-11 This first volume of PISA 2012 results

Rury,2023-10-13 *An Age of Accountability* highlights the role of test based accountability as a policy framework in American education from 1970 to 2020 For more than half a century the quest to hold schools and educators accountable for academic achievement has relied almost exclusively on standardized assessment The theory of change embedded in almost all test based accountability programs held that assessment with stipulated consequences could lead to major improvements in schools This was accomplished politically by proclaiming lofty goals of attaining universal proficiency and closing achievement gaps which repeatedly failed to materialize But even after very clear disappointments no other policy framework has emerged to challenge its hegemony The American public today has little confidence in institutions to improve the quality of goods and services they provide especially in the public sector As a consequence many Americans continue to believe that accountability remains a vital necessity even if educators and policy scholars disagree **A Guide to**

Frontiers in the Acquisition of Literacy Claire M. Fletcher-Flinn,2015-09-28 Learning to read and to spell are two of the most important cultural skills that must be acquired by children and for that matter anyone learning a second language We are not born with an innate ability to read A reading system of mental representations that enables us to read must be formed in the brain Learning to read in alphabetic orthographies is the acquisition of such a system which links mental representations of visual symbols letters in print words with pre existing phonological sound and semantic comprehension cognitive systems for language Although spelling draws on the same representational knowledge base and is usually correlated with reading the acquisition processes involved are not quite the same Spelling requires the sequential production

of letters in words and at beginning levels there may not be a full degree of integration of phonology with its representation by the orthography. Reading on the other hand requires only the recognition of a word for pronunciation. Hence spelling is more difficult than reading and learning to spell may necessitate more complete representations or more conscious access to them. The learning processes that children use to acquire such cognitive systems in the brain and whether these same processes are universal across different languages and orthographies are central theoretical questions. Most children learn to read and spell their language at the same time thus the co ordination of these two facets of literacy acquisition needs explication as well as the effect of different teaching approaches on acquisition. Lack of progress in either reading and or spelling is also a major issue of concern for parents and teachers necessitating a cross disciplinary approach to the problem encompassing major efforts from researchers in neuroscience cognitive science experimental psychology and education. The purpose of this Research Topic is to summarize and review what has been accomplished so far and to further explore these general issues. Contributions from different perspectives are welcomed and could include theoretical computational and empirical works that focus on the acquisition of literacy including cross orthographic research.
