

5TH GRADE SCIENCE

Solar Systems Objects

The image displays a collection of educational resources for 5th-grade science, specifically focusing on Solar System Objects. At the top, a diagram illustrates the solar system with the sun at the center, surrounded by planets and their moons. Below this, a laptop screen shows a lesson plan for SC.5.E.5.3, titled 'Solar System Objects'. The lesson plan includes a table of contents and a list of activities. To the right of the laptop, there are several worksheets titled 'Solar System Objects'. These worksheets cover topics such as Comets, The Flying Objects, Dwarf Planets, and Asteroids. Each worksheet includes a title, a description, and a small image. The worksheets are designed to be used as a guide for students to learn about the various objects in our solar system.

Solar System Objects

Comets

A comet is a chunk of frozen gases, rock, ice, and dust. Comets have long orbits around the sun. Some comets come close to the sun, begin to break apart, and release gas and dust. These particles reflect the sun's light, making the comet's long tail. A comet's tail always points away from the sun.

The Flying Objects

Besides planets, there are many other bodies that orbit the sun. Let's find out about some of them.

Moons

Other moons are very different from Earth's moon. Europa, one of Jupiter's moons, may have a liquid ocean under a layer of ice. Another of Jupiter's moons, Io [YO-oh], has the most active volcanoes of any body in the solar system.

Dwarf Planets

Pluto was once called a planet. But in 2006, it was reclassified as a dwarf planet. Dwarf planets are nearly round bodies whose orbits cross the orbits of other bodies. Most are found in a region of the solar system beyond Neptune's orbit called the Kuiper belt. These objects are far away and hard to study. Quaoar, whose name was discovered in 2002.

Asteroids

Asteroids are rock and iron objects that orbit the sun. Millions of them are found in the wide region between Mars and Jupiter. Asteroids are made of different materials. Some are made up of iron, some of rock, and some of metal.

Meteoroids

Each day, tons of meteoroids are pulled by Earth's gravity and travel through space. Most meteoroids burn up in Earth's atmosphere, causing a streak of light called a meteor. Meteoroids that reach Earth's surface are called meteorites.
