

QUANTUM THEORY OF LIGHT

**BRAIN
MAP**
CLASS XII

Basic Quantum Theory of Light

- According to Planck, the energy of a photon, $E = h\nu$;
$$E = h\nu = \frac{hc}{\lambda} = \frac{1240}{\lambda(\text{in nm})} \text{ eV}$$
- Momentum of photon, $p = \frac{E}{c} = \frac{h\nu}{c} = \frac{h}{\lambda}$
- If source is 100% efficient, then the number of photons emitted per second by the source can be given by
$$n = \frac{\text{Power of source}}{\text{Energy of photon}} = \frac{P}{E} = \frac{P}{h\nu} = \frac{PA}{hc}$$
- The energy crossing per unit area per unit time perpendicular to the direction of propagation is called the intensity of a wave.
 $I = E/At = P/A$
- Force exerted on perfectly reflecting surface
$$F = \frac{\Delta p}{t} = \frac{2N\hbar}{t\lambda} = n\left(\frac{2\hbar}{\lambda}\right) = \frac{2P}{c}$$

$$\text{Pressure} = \frac{F}{A} = \frac{2P}{cA} = \frac{2I}{c}$$
- Force exerted on perfectly absorbing surface
$$F = \frac{\Delta p}{t} = \frac{N\hbar}{t\lambda} = n\left(\frac{\hbar}{\lambda}\right) = \frac{P}{c}$$

$$\text{Pressure} = \frac{F}{A} = \frac{P}{cA} = \frac{I}{c}$$

- When a beam of light is incident at an angle θ on perfectly reflector surface then force exerted on the surface,

$$F = \frac{2P}{c} \cos \theta = \frac{2IA \cos \theta}{c}$$

$$\text{Pressure} = \frac{2I \cos \theta}{c}$$

PARTICLE NATURE OF RADIATION

Conclusions of Experimental Study of Photoelectric Effect

- Photo-current is directly proportional to the intensity of incident light, i.e., $i_p \propto I$.
(At constant frequency ν and potential V)
- At constant frequency and intensity, the minimum negative potential at which the photocurrent becomes zero is called stopping potential (V_0).
- At stopping potential V_0 , $K_{\max} = eV_0$.
- For a given frequency of the incident radiation, the stopping potential is independent of its intensity.
- The stopping potential varies linearly with the frequency of incident radiation but saturation current value remains constant for a fixed intensity of incident radiation.

- Quantum efficiency = $\frac{n_e}{n_{ph}}$
 n_e = number of electron emitted per second
 n_{ph} = total number of photon incident per second

Solid State and Quantum Theory for Optoelectronics Michael A. Parker, 2009-12-16 While applications rapidly change one to the next in our commercialized world fundamental principles behind those applications remain constant So if one understands those principles well enough and has ample experience in applying them he or she will be able to develop a capacity for reaching results via conceptual thinking rather than having to

AI for Physics Volker Knecht, 2022-08-29 Written in accessible language without mathematical formulas this short book provides an overview of the wide and varied applications of artificial intelligence AI across the spectrum of physical sciences Focusing in particular on AI's ability to extract patterns from data known as machine learning ML the book includes a chapter on important machine learning algorithms and their respective applications in physics It then explores the use of ML across a number of important sub fields in more detail ranging from particle molecular and condensed matter physics to astrophysics cosmology and the theory of everything The book covers such applications as the search for new particles and the detection of gravitational waves from the merging of black holes and concludes by discussing what the future may hold

A First Course in String Theory Barton Zwiebach, 2009-01-22 String theory made understandable Barton Zwiebach is once again faithful to his goal of making string theory accessible to undergraduates He presents the main concepts of string theory in a concrete and physical way to develop intuition before formalism often through simplified and illustrative examples Complete and thorough in its coverage this new edition now includes AdS/CFT correspondence and introduces superstrings It is perfectly suited to introductory courses in string theory for students with a background in mathematics and physics New sections cover strings on orbifolds cosmic strings moduli stabilization and the string theory landscape Now with almost 300 problems and exercises with password protected solutions for instructors at www.cambridge.org/zwiebach

Collapse of the Wave Function Shan Gao, 2018-04-26 An overview of the collapse theories of quantum mechanics Written by distinguished physicists and philosophers of physics it discusses the origin and implications of wave function collapse the controversies around collapse models and their ontologies and new arguments for the reality of wave function collapse

A Skeptic's Guide to Belief Ken Crispin, 2019-04-04 What would happen if you faced your doubts set aside your preconceptions and decided to follow the path of truth wherever it might lead Most people whether believers or atheists doggedly defend what they have always believed Many see this as an expression of faith Yet there is something almost inexpressibly sad about the plight of people living out their lives in reliance upon beliefs they dare not question Perhaps that is why many of us come to a point at which we feel compelled to pursue the truth no matter what the implications But even if we found the courage to embark upon such a journey could we really find a path through the scientific philosophical experiential and theological thickets that surround the great questions of life And if we did would we know the truth and be set free Would we be forced to face a long feared despair Or would we find ourselves still staring impotently at an enigmatic universe This is a book unlike any other It

addresses these questions with unflinching honesty drawing evidence from a diversity of scientific fields and subjecting the competing arguments to rigorous skeptical analysis Energy Research Abstracts ,1993 Dictionary of North Carolina Biography William S. Are there haptic and or auditory equivalents of the visual object file Are there equivalents of the visual object token How are object identification conflicts between different perceptual systems resolved Is the common assumption that persistent object is a fundamental innate category justified How does the ability to identify and categorize objects relate to the ability to name and describe them using language How are features that an individual object had in the past but does not have currently represented How are categorical constraints on how objects move or act represented and how do such constraints influence categorization and the re identification of individuals How do human beings re identify objects including each other as persistent individuals across changes in location context and features even after gaps in observation lasting months or years How do human capabilities for object categorization and re identification over time relate to those of other species and how do human infants develop these capabilities What can modeling approaches such as cognitive robotics tell us about the answers to these questions Primary research reports reviews and hypothesis and theory papers addressing questions relevant to the understanding of perceptual object segmentation categorization and individual identification at any scale and from any experimental or modeling perspective are solicited for this Research Topic Papers that review particular sets of issues from multiple disciplinary perspectives or that advance integrative hypotheses or models that take data from multiple experimental approaches into account are especially encouraged
