

GINA methodology – additional details

- The GINA report is a global strategy document
 - Regulatory approvals and submissions differ from country to country
 - Many recommendations are 'off-label' in various countries, particularly for paediatrics
 - The term 'off-label' is no longer used in the GINA report or slides
- For new therapies
 - Regulatory agencies often receive more safety data than are in peer-reviewed literature
 - GINA makes recommendations based on the best available evidence, after approval by at least one major regulatory agency (e.g. EMA, FDA)
- For existing medications with evidence for new regimens or populations
 - If satisfied with evidence for safety and effectiveness, GINA may consider making recommendations that are not covered by a regulatory indication in any country at the time
 - Examples: long-term macrolides for moderate-severe asthma (2018); as-needed ICS-formoterol, or taking ICS whenever SABA is taken, for mild asthma (2019)
- When assessing and treating patients
 - Use your own professional judgment
 - Take into account local and national guidelines and payer eligibility criteria, and licensed drug doses

Clinical Allergy and Asthma Management in Adolescents and Young Adults Ravindran Chetambath, Venugopal Panicker, 2021-11-29
This text addresses the need for a practical handbook on asthma and allergy in adolescents and young adults, which constitutes an interesting and challenging age group. Asthma may diminish in intensity with age but is still an ongoing concern. In addition, compliance with management is not generally successful with the risk that the failure to treat it adequately could lead to long-term sequelae, namely COPD. Finally, obesity and sedentarism in young adults and adolescents can worsen asthma. On the one hand, while some can be athletes, on the other hand, this ready reckoner aims to help in understanding clinical allergy, which is imperative for every physician who is caring for patients with asthma given its high prevalence and heterogeneous treatment options.

KEY FEATURES Covers allergic diseases in general and asthma in detail and provides comprehensive coverage of clinical features, diagnosis, and management using a case-based approach. Creates awareness of the fundamentals of clinical allergy, helping physicians make wise choices in medical and surgical management, especially in resource-limited settings. Features insight from international authors with clinical experience in the diagnosis and treatment of asthma in the specific age group of adolescents and young adults.

Rosenwasser,2010-01-13 When I entered the field of allergy in the early 1970s the standard textbook was a few hundred pages and the specialty was so compact that texts were often authored entirely by a single individual and were never larger than one volume Compare this with Allergy Frontiers Epigenetics Allergens and Risk Factors the present s volume text with well over 150 contributors from throughout the world This book captures the explosive growth of our specialty since the single author textbooks referred to above The unprecedented format of this work lies in its meticulous attention to detail yet comprehensive scope For example great detail is seen in manuscripts dealing with topics such as Exosomes naturally occurring minimal antigen presenting units and Neuropeptide S receptor 1 NPSR1 an asthma susceptibility gene The scope is exemplified by the unique approach to disease entities normally dealt with in a single chapter in most texts For example anaphylaxis a topic usually confined to one chapter in most textbooks is given five chapters in Allergy Frontiers This approach allows the text to employ multiple contributors for a single topic giving the reader the advantage of being introduced to more than one vi point regarding a single disease **Asthma: Targeted Biological Therapies** Girolamo

Pelaia,Alessandro Vatrella,Rosario Maselli,2016-11-10 This book focuses on the fundamentals of the use of biologics in asthma describing the rationale principles mechanisms of action and indications It offers an excellent balance between basic science and the analysis of clinical trials updating readers with new developments that are changing the global scenario for targeted biological anti asthma therapies especially with regard to more severe disease A range of therapies are considered from the humanized monoclonal anti IgE antibody omalizumab widely approved as add on treatment for inadequately controlled disease through to emerging biologics for which evidence supportive of efficacy is accumulating including anti IL 5 anti IL 4 and anti IL 13 therapies One aspect to emerge is the variability in individual response which suggests a need for characterization of different asthma subtypes to permit the effective implementation of phenotype targeted treatments This book will be of interest for pulmonologists clinical immunologists and physicians seeking sound information on these therapies but also for scientists and pharmacologists wishing to enhance their knowledge of the therapeutic implications of the cellular and molecular mechanisms that underlie severe uncontrolled asthma The Nose and Sinuses in Respiratory
