Ecological Studies of Six Endangered Butterflies (Lepidoptera, Lycaenidae) Richard A. Arnold, Richard Arthur Arnold, 1983-01-01 Ecological Studies of Six Endangered Butterflies (Lepidoptera, Lycaenidae) Richard A. Arnold, 1983-01-01 *Conservation Biology of Lycaenidae (butterflies)* T. R. New, 1993 *Endangered Species Technical Bulletin*, 1983 *Monitoring Butterflies for Ecology and Conservation* E. Pollard, T.J. Yates, 1993-05-31 Previously published in hardback and now made available in paperback this ground breaking book is a must for all interested in butterflies whether as conservation biologist amateur or professional entomologist or as a student studying the phenomenon of butterfly populations as part of a number of biology ecology or conservation courses Recently many British butterflies have suffered severe declines while others have flourished and expanded in range This is the first book to describe the results from a British scheme to monitor butterflies during this period of change The Monitoring Scheme initiated in 1976 by the senior author is based on frequent counts at some 90 sites throughout Britain The combined efforts of both amateurs and professionals have thus produced a dataset with no equivalent elsewhere in the world The book therefore provides a unique perspective on trends in numbers extinction and foundation of populations flight periods local distributions migration and other aspects of population ecology Practical problems encountered during the conservation of butterflies of individual sites are outlined The relevance of this monitoring for an understanding of the effects of the weather climatic warming is described A Revision of the Sawfly Family Orussidae for North and Central America (Hymenoptera--Symphyta, Orussidae) Jerry A. Powell, Woodrow Wilson Middlekauff, 1983 Revised Recovery Plan for Three Endangered Species Endemic to Antioch Dunes, California, 1984 **Status and Trends of the Nation's Biological Resources**, 1998 **Smith's Blue Butterfly Recovery Plan**, 1984 **Metapopulation Dynamics: Empirical and Theoretical Investigations** Michael Gilpin, 2012-12-02 Metapopulation Dynamics Empirical and Theoretical Investigations covers the 1989 proceedings of a metapopulation dynamics workshop held at Lammi Biological Station Helsinki Finland It is divided into 18 chapters that cover various approaches to spatially structured population and community dynamics After briefly discussing the history of metapopulation ideas and the major conceptual links the book covers types of studies that have been conducted on single species and multispecies metapopulations Then it examines the relationships between metapopulation dynamics the equilibrium theory of island biogeography and the dynamics of populations living in patchy environments It further tackles practical issues and the links between metapopulation dynamics and landscape ecology and between metapopulation dynamics and conservation biology Chapters 4 and 5 present structured models describing changes in the number of individuals within patches and an empirical evaluation of local extinction in metapopulation studies The subsequent chapters discuss several aspects of metapopulation including dispersal and connectivity colonization conspecific attraction extinction and isolation and forest fragmentation The latter chapters describe the concept of habitat fragmentation the diversity and

competition in metapopulations the community collapse and the effects of metapopulation studies in predator prey systems

Science and the Endangered Species Act National Research Council, Commission on Life Sciences, Board on Environmental Studies and Toxicology, Committee on Scientific Issues in the Endangered Species Act, 1995-10-13 The Endangered Species Act ESA is a far reaching law that has sparked intense controversies over the use of public lands the rights of property owners and economic versus environmental benefits In this volume a distinguished committee focuses on the science underlying the ESA and offers recommendations for making the act more effective The committee provides an overview of what scientists know about extinction and what this understanding means to implementation of the ESA Habitat its destruction conservation and fundamental importance to the ESA is explored in detail The book analyzes Concepts of species how the term species arose and how it has been interpreted for purposes of the ESA Conflicts between species when individual species are identified for protection including several case studies Assessment of extinction risk and decisions under the ESA how these decisions can be made more effectively The book concludes with a look beyond the Endangered Species Act and suggests additional means of biological conservation and ways to reduce conflicts It will be useful to policymakers regulators scientists natural resource managers industry and environmental organizations and those interested in biological conservation

Status and Trends of the Nation's Biological Resources Catherine E. Puckett Haecker, Paul A. Opler, Peter D. Doran, 1998 **The Butterflies of Iowa** Dennis W. Schlicht, John C. Downey, Jeffrey C. Nekola, 2007-05-01 This beautiful and comprehensive guide many years in the making is a manual for identifying the butterflies of Iowa as well as 90 percent of the butterflies in the Plains states It begins by providing information on the natural communities of Iowa paying special attention to butterfly habitat and distribution Next come chapters on the history of lepidopteran research in Iowa and on creating butterfly gardens followed by an intriguing series of questions and issues relevant to the study of butterflies in the state *Insect Species Conservation* T. R. New, 2009-05-28 This book brings together scattered information on insect conservation providing a robust foundation for future progress using examples from around the world

Ecology Abstracts, 1984 Indexes journal articles in ecology and environmental science Nearly 700 journals are indexed in full or in part and the database indexes literature published from 1982 to the present Coverage includes habitats food chains erosion land reclamation resource and ecosystems management modeling climate water resources soil and pollution

Ecological Studies of Six Endangered Butterflies (Lepidoptera, Lycaenidae) Richard Arthur Arnold, Robert W. Brooks, 1926 **The Cerambycidae of North America, Part VII, No. 1** Earle Gorton Linsley, John A. Chemsak, 1984-01-01 This volume concludes the taxonomy and classification of the family Cerambycidae of America north of Mexico This part includes the remainder of the subfamily Lamiinae tribes Acanthocinini Cyrtinini Saperdini Phytoeciini Tetraspini and Hemilophini The 32 genera and 138 species are all fully described with keys included to separate all taxa Complete synonymical bibliographies are presented along with 54 illustrations **Cladistic Analysis of North American Platynini**

and Revision of the Agonum Extensicolle Species Group (Coleoptera, Carabidae) James Kenneth Liebherr, 1986-01-01

Cladistic analysis based on internal male female reproductive characters and external characters is used to group exemplar taxa in the carabid tribe Platynini A classification key to genera in North America and a key to species groups of Agonum in North America north of Mexico are presented The Agonum extensicolle species group comprises seven species A cyanope Bates A extimum Liebherr n sp A parextimum Liebherr n sp A texanum LeConte A extensicolle Say A decorum Say A elongatulum Dejean Analyses of infraspecific geographic variation show 1 A texanum is biometrically uniform over the center of its range whereas individuals from outlying populations deviate in several measurements 2 A extensicolle is a variable species with clinal changes in biometry and color occurring across its range 3 A decorum is polymorphic for color and setation and clinally variable in biometric characters Across the group flight apparatus development is inversely correlated with the amount of genetic heterogeneity measured by starch gel electrophoresis Electrophoretic qualitative morphological and biometric data are used to estimate phylogenetic relationships in the A extensicolle group The electrophoretic and morphological data produce compatible estimates of phylogeny The biometric data are incompatible with the other data and are judged less useful for estimation of affinities Distributional data are utilized in conjunction with the proposed phylogeny to investigate speciation events in the group The principal mechanism is allopatric speciation brought about by vicariance across the lowlands of southeastern Arizona the Cochise filter barrier A second pattern involves a peripheral isolate of Antillean stock diverging on the Florida peninsula A third speciation event involves a habitat shift in which a lowland desert form produced a species which now inhabits the pine oak zone in the Sierra Madre Occidental The area taxon relationships are compared with those in other groups Based on an electrophoretic clock calibrated using data from Drosophila the timing of the initial speciation event in the group is estimated at 6 12 million years b p Other speciation events occurred throughout the Pliocene and Pleistocene with the most recent divergence of A decorum and A elongatulum estimated at less than two million years b p

Recovery Plan for the San Bruno Elfin and Mission Blue Butterflies ,1984 Insect Biodiversity Robert G. Foottit, Peter H. Adler, 2017-10-02 Volume One of the thoroughly revised and updated guide to the study of biodiversity in insects The second edition of Insect Biodiversity Science and Society brings together in one comprehensive text contributions from leading scientific experts to assess the influence insects have on humankind and the earth's fragile ecosystems Revised and updated this new edition includes information on the number of substantial changes to entomology and the study of biodiversity It includes current research on insect groups classification regional diversity and a wide range of concepts and developing methodologies The authors examine why insect biodiversity matters and how the rapid evolution of insects is affecting us all This book explores the wide variety of insect species and their evolutionary relationships Case studies offer assessments on how insect biodiversity can help meet the needs of a rapidly expanding human population and also examine the consequences that an increased loss of insect species will have on the world This important text Explores the rapidly

increasing influence on systematics of genomics and next generation sequencing Includes developments in the use of DNA barcoding in insect systematics and in the broader study of insect biodiversity including the detection of cryptic species Discusses the advances in information science that influence the increased capability to gather manipulate and analyze biodiversity information Comprises scholarly contributions from leading scientists in the field Insect Biodiversity Science and Society highlights the rapid growth of insect biodiversity research and includes an expanded treatment of the topic that addresses the major insect groups the zoogeographic regions of biodiversity and the scope of systematics approaches for handling biodiversity data
