Production Benjamin Blumenstein, 2017-01-01 Both global food and energy systems are increasingly faced with major challenges regarding food security and non fossil energy provision respectively Organic or low input agriculture as well as

bioenergy production may contribute to securing rising food and energy needs. However, low input agricultural systems are challenged for their lower productivity compared to high input systems. Moreover, bioenergy systems are often criticized for their unsustainable high input cropping systems. Consequently, innovative approaches are needed to optimize both sectors. A promising strategy may be the integration of organic or low input agricultural systems with agricultural bioenergy production with the objective to increase both productivity and sustainability of land use systems. This dissertation examines the opportunities and risks of integrated bioenergy production in organic and low input agricultural systems based on the example of two bioenergy technologies: anaerobic digestion (AD) and integrated generation of solid fuel and biogas from biomass (IFBB) by assessment of their structural framework conditions, systematic implications as well as economic and risk performance. In a final step, the role of integrated agricultural bioenergy production within the context of the so-called sustainable intensification is debated.

The Decentralized and Networked Future of Value Creation Jan-Peter Ferdinand, Ulrich Petschow, Sascha Dickel, 2016-05-14. This book identifies, analyzes and discusses the current trends of digitalized decentralized and networked physical value creation by focusing on the particular example of 3D printing. In addition to evaluating 3D printing's disruptive potentials against a broader economic background, it also addresses the technology's potential impacts on sustainability and emerging modes of bottom-up and community-based innovation. Emphasizing these topics from economic, technical, social and environmental perspectives, the book offers a multifaceted overview that scrutinizes the scenario of a fundamental transition from a centralized to a far more decentralized system of value creation.
