Abstract The authors present a method for determining the optimal number of clusters in a dataset. The method is based on the analysis of the variance within and between clusters. The authors show that the optimal number of clusters is the number of clusters that minimizes the within-cluster variance. The authors also show that the optimal number of clusters is the number of clusters that maximizes the between-cluster variance. The authors provide a detailed description of the method and its application to a dataset of 1000 points. The authors also provide a comparison of the method to other methods for determining the optimal number of clusters. The authors conclude that the method is a simple and effective way to determine the optimal number of clusters in a dataset.
