Dual-use life science research and

biosecurity in the 21st Century: Social, Technical, Policy, and Ethical Challenges Jonathan E. Suk, Kathleen M.

Vogel, Amanda Jane Ozin, 2015-06-04 In September 2011 scientists announced new experimental findings that would not only threaten the conduct and publication of influenza research but would have significant policy and intelligence implications. The findings presented a modified variant of the H5N1 avian influenza virus hereafter referred to as the H5N1 virus that was transmissible via aerosol between ferrets. These results suggested a worrisome possibility: the existence of a new airborne and highly lethal H5N1 virus that could cause a deadly global pandemic. In response, a series of international discussions on the nature of dual use life science arose. These discussions addressed the complex social, technical, political, security, and ethical issues related to dual use research. This Research Topic will be devoted to contributions that explore this matrix of issues from a variety of case study and international perspectives.

National Aeronautics and Space Administration, 1986 **Cerambycidae of the World** Qiao Wang, 2017-01-06 Wang has gathered contributions from an impressive cohort of the world's most respected experts on longhorned beetles. Chapters review both basics of cerambycid taxonomy, morphology and behavior, feeding, reproduction, and chemical ecology, as well as more applied concerns such as laboratory rearing, pest control, and biosecurity. Overall, this volume is a valuable contribution to the literature as a one-stop shop for readers seeking a comprehensive overview of longhorned beetles. It represents a tremendous effort on the part of Wang and the authors and has resulted in a much-needed update to the literature. This volume is the only work of its kind available at this time and is a valuable addition to the library of any scientist studying wood-boring beetles.

Ann M. Ray, Biology, Xavier University, Cincinnati, Ohio, in The Quarterly Review of Biology, Volume 94, 2019. There are more than 36,000 described species in the family Cerambycidae in the world. With the significant increase of international trade in the recent decades, many cerambycid species have become major plant pests outside their natural distribution range, causing serious environmental problems at great cost. Cerambycid pests of field, vine, and tree crops and of forest and urban trees cost billions of dollars in production losses, damage to landscapes, and management expenditures worldwide. **Cerambycidae of the World: Biology and Pest Management** is the first comprehensive text dealing with all aspects of cerambycid beetles in a global context. It presents our current knowledge on the biology, classification, ecology, plant disease transmission, and biological, cultural, and chemical control tactics, including biosecurity measures from across the world. Written by a team of global experts, this book provides an entrance to the scientific literature on Cerambycidae for scientists in research institutions, primary industries, and universities and will serve as an essential reference for agricultural and quarantine professionals in governmental departments throughout the world.
