Interface Between Chemistry And Biochemistry:

Interface between Chemistry and Biochemistry P. Jolles, H. Jörnvall, 2011-09-20 The developing importance of the interface between chemistry and biology is probably the largest change to have occurred in chemistry in the past 15 years. Increasingly more chemists work on problems dealing with biology and interfacial research is poised to move into the main stream of both disciplines. This merging of two types of approach has resulted in a vigorous research discipline with unprecedented potential to address important biological and chemical problems. A series of examples is developed in this book. Analytical aspects are discussed in several chapters. Fundamental concepts do not only derive from chemistry but chemistry has provided biochemistry with powerful tools of analysis. Equally important physicochemical methods allow studies of nucleic acids and lipids, lipases, receptors and other membrane proteins. Several chapters deal with enzymes in different contexts. The part devoted to metalloproteins is directed toward zinc metallochemistry and NMR structural work on zinc proteins. Chemists have been able to bring to biology their characteristic approach of synthesizing new molecules. These aspects are treated in chapters devoted to glycopeptides and uses of peptides as probes. Further fields of interest in combining different disciplines concern novel active compounds such as surfactant peptides and catalytic antibodies in studies resulting from close collaboration between chemists and biochemists. Chemical Probes in Biology Science at the

Interface of Chemistry, Biology and Medicine Manfred P. Schneider, 2003-11-30 The field of Bioorganic Chemistry or Chemical Biology as it is also called constitutes a highly interdisciplinary branch of chemistry beyond the traditional pathways in which chemists and biologists have been working in the past. The topics covered in this book include inter alia anticancer agents, antioxidants, chemotaxis, carbohydrates, DNA detection and delivery, enzyme structure, enzyme assisted syntheses, fluorescent probes, gene therapy, genomics, inositol phospholipids, inositol phosphates, multivalent ligands, organic syntheses, oxidative stress, photoaffinity labeling techniques, natural products, syntheses and biological activities, phospholipases, proteomics, receptors such as tyrosine kinases, signal transduction phenomena, x-ray crystallography and many more. The book represents an excellent survey of the current state of the art in an exciting area of interdisciplinary science and supplies an incentive for increased cooperation in Science at the Interface of Chemistry, Biology and Medicine.

Intestinal Lipid Metabolism Charles M. Mansbach II,Patrick Tso,Arnis Kuksis,2011-06-28 This book was stimulated by the enthusiasm shown by attendees at the meetings in Saxon River VT sponsored by the Federation of American Societies for Experimental Biology FASEB on the subject of the intestinal processing of lipids When these meetings were first started in 1990 the original organizers two of whom are editors of this volume CMM and PT had two major goals The first was to bring together a diverse group of investigators who had the common goal of gaining a better understanding of how the intestine absorbs lipids The second was to stimulate the interest of younger individuals whom we wished to recruit into what we believed was an exciting and fruitful area of research Since that time the field has opened up considerably with new questions being asked and new answers obtained suggesting that our original goals for the meetings were being met In the same spirit it occurred to us that there has not been a recent book that draws together much of the information available concerning how the intestine processes lipids This book is intended to reach investigators with an interest in this area and their pre and post doctoral students The chapters are written by individuals who have a long term interest in the areas about which they write and many have been speakers at the subsequent FASEB conferences that have followed on the first **The Philosophy of**

Chemistry Jean-Pierre Llored, 2014-09-26 This volume connects chemistry and philosophy in order to face questions raised by chemistry in our present world The idea is first to develop a kind of philosophy of chemistry which is deeply rooted in the exploration of chemical activities We thus work in close contact with chemists technicians engineers researchers and teachers Following this line of reasoning the first part of the book encourages current chemists to describe their workaday practices while insisting on the importance of attending to methodological metrological philosophical and epistemological questions related to their activities It deals with sustainable chemistry chemical metrology nanochemistry and biochemistry among other crucial topics In doing so those chemists invite historians and philosophers to provide ideas for future developments In a nutshell this part is a call for forthcoming collaborations focused on instruments and methods that is on ways of doing chemistry The second part of the book illustrates the multifarious ways to study chemistry and even proposes new approaches to doing so Each approach is interesting and incomplete but the emergent whole is richer than any of its components Analytical work needs socio historical expertise as well as many other approaches in order to keep on investigating chemistry to greater and greater depth This heterogeneity provides a wide set of methodological perspectives not only about current chemical practices but also about the ways to explore them philosophically Each approach is a resource to study chemistry and to reflect upon what doing philosophy of science can mean In the last part of the volume philosophers and chemists propose new concepts or reshape older ones in order to think about chemistry The act of conceptualization itself is queried as well as the relationships between concepts and chemical activities Prefaced by Nobel Laureate in Chemistry Roald Hoffmann and by the President of the International Society for the Philosophy of Chemistry Rom Harr this volume is a plea for the emergence of a collective cleverness and aims to foster inventiveness *Catalyzing Inquiry at the Interface of Computing and Biology* National Research Council, Division on Engineering and Physical Sciences, Computer Science and Telecommunications Board, Committee on Frontiers at the Interface of Computing and Biology, 2006-01-01 Advances in computer science and technology and in biology over the last several years have opened up the possibility for computing to help answer fundamental questions in biology and for biology to help with new approaches to computing Making the most of the research opportunities at the interface of computing and biology requires the active participation of people from both fields While past attempts have been made in this direction circumstances today appear to be much more favorable for progress To help take advantage of these opportunities this study was requested of the NRC by the National Science Foundation the Department of Defense the National Institutes of Health and the Department of Energy The report provides the basis for establishing cross disciplinary collaboration between biology and computing including an analysis of potential impediments and strategies for overcoming them The report also presents a wealth of examples that should encourage students in the biological sciences to look for ways to enable them to be more effective users of computing in their studies **From Medical Chemistry to Biochemistry** Robert E. Kohler, 1982-05-31 This penetrating case study of

institution building and entrepreneurship in science shows how a minor medical speciality evolved into a large and powerful academic discipline Drawing extensively on little used archival sources the author analyses in detail how biomedical science became a central part of medical training and practice The book shows how biochemistry was defined as a distinct discipline by the programmatic vision of individual biochemists and of patrons and competitors in related disciplines It shows how discipline builders used research programmes as strategies that they adapted to the opportunities offered by changing educational markets and national medical reform movements in the United States Britain and Germany The author argues that the priorities and styles of various departments and schools of biochemistry reflect systematic social relationships between that discipline and biology chemistry and medicine Science is shaped by its service roles in particular local contexts This is the central theme The author's view of the political economy of modern science will be of interest to historians and social scientists scientific and medical practitioners and anyone interested in the ecology of knowledge in scientific institutions and professions
