National Bureau of Standards, 1973 *Uncertainty, Modeling, and Decision Making in Geotechnics* Kok-Kwang Phoon, Takayuki Shuku, Jianye Ching, 2023-12-11 *Uncertainty Modeling and Decision Making in Geotechnics* shows how uncertainty quantification and numerical modeling can complement each other to enhance decision making in geotechnical practice filling a critical gap in guiding practitioners to address uncertainties directly The book helps practitioners acquire a working knowledge of geotechnical risk and reliability methods and guides them to use these methods wisely in conjunction with data and numerical modeling In particular it provides guidance on the selection of realistic statistics and a cost effective accessible method to address different design objectives and for different problem settings and illustrates the value of this to decision making using realistic examples Bringing together statistical characterization reliability analysis reliability based design probabilistic inverse analysis and physical insights drawn from case studies this reference guide from an international team of experts offers an excellent resource for state of the practice uncertainty informed geotechnical design for specialist practitioners and the research community

Optical Radiometry and Satellite Validation Agnieszka Bialek, David Doxaran, Vittorio Ernesto Brando, Clemence Goyens, Kevin Ruddick, Ana Ines Dogliotti, 2025-08-26 Strict quality control is essential to ensure that the satellite data products routinely used for environmental monitoring of water and land surfaces are fit for purpose A crucial step in this process is the validation of the water and land surface reflectances from which the final end user products are derived The topic of radiometric validation is growing rapidly in importance both because of the advent of operational satellite missions for routine environmental monitoring and because of the rapid expansion in the number of satellite missions including CubeSat constellations with limited cal val resources This enhanced need for radiometric validation data covering a wide VIS NIR SWIR range e g 380 2400nm preferably with a hyperspectral resolution must be met by new techniques and hardware particularly ground based automated radiometry

Understanding Acoustics Steven L. Garrett, 2020-11-02 This open access textbook like Rayleigh's classic *Theory of Sound* focuses on experiments and on approximation techniques rather than mathematical rigor The second edition has benefited from comments and corrections provided by many acousticians in particular those who have used the first edition in undergraduate and graduate courses For example phasor notation has been added to clearly distinguish complex variables and there is a new section on radiation from an un baffled piston Drawing on over 40 years of teaching experience at UCLA the Naval Postgraduate School and Penn State the author presents a uniform methodology based on hydrodynamic fundamentals for analysis of lumped element systems and wave propagation that can accommodate dissipative mechanisms and geometrically complex media Five chapters on vibration and elastic waves highlight modern applications including viscoelasticity and resonance techniques for measurement of elastic moduli while introducing analytical techniques and approximation strategies that are revisited in nine

subsequent chapters describing all aspects of generation transmission scattering and reception of waves in fluids Problems integrate multiple concepts and several include experimental data to provide experience in choosing optimal strategies for extraction of experimental results and their uncertainties Fundamental physical principles that do not ordinarily appear in other acoustics textbooks like adiabatic invariance similitude the Kramers Kronig relations and the equipartition theorem are shown to provide independent tests of results obtained from numerical solutions commercial software and simulations Thanks to the Veneklasen Research Foundation this popular textbook is now open access making the e book available for free download worldwide Provides graduate level treatment of acoustics and vibration suitable for use in courses for self study and as a reference Highlights fundamental physical principles that can provide independent tests of the validity of numerical solutions commercial software and computer simulations Demonstrates approximation techniques that greatly simplify the mathematics without a substantial decrease in accuracy Incorporates a hydrodynamic approach to the acoustics of sound in fluids that provides a uniform methodology for analysis of lumped element systems and wave propagation Emphasizes actual applications as examples of topics explained in the text Includes realistic end of chapter problems some including experimental data as well as a Solutions Manual for instructors Features Talk Like an Acoustician boxes to highlight key terms introduced in the text

[Making the Connection](#) Marilyn Paula Carlson, Chris Rasmussen, 2008 The chapters in this volume convey insights from mathematics education research that have direct implications for anyone interested in improving teaching and learning in undergraduate mathematics This synthesis of research on learning and teaching mathematics provides relevant information for any math department or individual faculty member who is working to improve introductory proof courses the longitudinal coherence of precalculus through differential equations students mathematical thinking and problem solving abilities and students understanding of fundamental ideas such as variable and rate of change Other chapters include information about programs that have been successful in supporting students continued study of mathematics The authors provide many examples and ideas to help the reader infuse the knowledge from mathematics education research into mathematics teaching practice University mathematicians and community college faculty spend much of their time engaged in work to improve their teaching Frequently they are left to their own experiences and informal conversations with colleagues to develop new approaches to support student learning and their continuation in mathematics Over the past 30 years research in undergraduate mathematics education has produced knowledge about the development of mathematical understandings and models for supporting students mathematical learning Currently very little of this knowledge is affecting teaching practice We hope that this volume will open a meaningful dialogue between researchers and practitioners toward the goal of realizing improvements in undergraduate mathematics curriculum and instruction
