

brakes . . .

Your 1961 Cadillac is equipped with Power Brakes. The pedal is low and wide for easy, comfortable, convenient use. The conventional braking system remains in reserve in the event the power system should become inoperative, or if it is necessary to apply the brakes several times when the engine is not running. Of course, greater effort is required to stop the car if the power system is inoperative for any reason. Stop lights are operative only when the ignition key is "ON".

Under normal driving conditions your Cadillac will not require periodic brake adjustment to compensate for lining wear. All wheels are equipped with automatic brake adjusters. Have your brake linings checked at least once a year by your Cadillac Dealer.

Parking Brake

To apply the parking brake, merely step on the parking brake pedal which is suspended from the instrument panel to the left of the power pedal. It will lock into place automatically when the transmission is in "Park" or "Neutral" ranges. The parking brake will release automatically when the transmission lever is moved to any drive range when the engine is running. To use the brake manually, depress the parking brake assembly, located on the left side of the instrument panel on the hand release lever. As a safety precaution when parking on hills, it is advisable to turn the parking lever toward the curb, lock the rear wheels by placing the transmission lever in "Park" position and place the parking brake in the "on" position. If the travel of the parking brake exceeds five inches, it should be checked by your Cadillac Dealer.
