Stanley Warford,2013-12-01 The world of computing has always had one corner stone of particular interest to many from educators to practitioners languages And programming languages in particular Over the years we have seen new languages come and

much less frequently old languages go. It is always tempting to focus on the one language of fashion of the day. In this very readable and instructive textbook Stan Warford has done the unusual and risky by taking the programming language Component Pascal that is far from mainstream although it does have roots that are among the strongest in the field. Given that the concept of formal language whether at the level of architecture design or implementation language is central to our discipline it is important that students continue to be exposed to a wide variety of languages. No single language does everything perfectly or even well and students need to understand this fundamental tradeoff. The same holds for frameworks and programming models that need to be designed to allow harmony between the natural ways of a language and the needs to a framework for a particular domain.

Douglas, 2011 Chaperonins are a unique class of molecular chaperone that assist in the folding of newly synthesized partially folded and misfolded proteins The importance of these folding machines is evident by their conservation across all three branches of life The general structure of the chaperonins consists of 14-18 subunits which form two back to back cavities Unfolded polypeptide substrate is captured in one of the two cavities and assisted to its native conformation in an ATP dependent fashion The chaperonins can be separated into two related but unique groups The group I chaperonins typified by GroEL from bacteria are fairly well understood however there are substantial gaps in our knowledge of the group II chaperonins such as TRiC from the eukaryotic cytosol Gaining a mechanistic understanding of the group II chaperonins is of great importance as it has been shown that TRiC malfunction is associated with a variety of diseases Toward this end the group II chaperonin conformation cycle ATPase and substrate folding mechanism have been investigated This work elucidates key components of the folding cycle and greatly increases our understanding of these folding machines **Cocoa**
