Anesthesia for Renal Transplantation Gwendolyn B. Graybar, Lois L. Bready, 2012-12-06 This treatise commemorates the 32nd anniversary of the first successful allogeneic kidney transplant in a human being and the beginning of a continuing challenge for well over a generation of anesthesiologists If comparisons can be permitted this epoch making event can be ranked with the first pulmonary lobectomy and subsequently the initial ligation of a patent ductus arteriosus in the late 1930s when thoracic and cardiac surgery began Was it merely a coincidence that brought these events to the fore so close upon one another after many years of ideation and frustration Not so according to Lewis Thomas for this was the time of medicine's second revolution its transformation from an empirical art into a powerfully effective science The remote Galenic conception of disease with its emphasis on disturbed body humors was about to be supplanted by effective therapeutics as signified by the introduction of the sulfonamides and antibiotics for the specific treatment of infection Anesthesiology had been dormant up to that era still relying upon a few agents more or less utilized from the beginning and purveyed by a handful of specialists who had not yet begun to ask the scientific questions necessary for their maturation into a bona fide discipline However anesthesiology was inevitably caught in the ferment for as Peter Caws observed It serves to remind us that the development of science is a stepwise process nobody starts from scratch and nobody gets very far ahead of the rest

Culturing Life Hannah Landecker,2010-03-30 How did cells make the journey one we take so much for granted from their origin in living bodies to something that can be grown and manipulated on artificial media in the laboratory a substantial biomass living outside a human body plant or animal This is the question at the heart of Hannah Landecker's book She shows how cell culture changed the way we think about such central questions of the human condition as individuality hybridity and even immortality and asks what it means that we can remove cells from the spatial and temporal constraints of the body and harness them to human intention Rather than focus on single discrete biotechnologies and their stories embryonic stem cells transgenic animals Landecker documents and explores the wider genre of technique behind artificial forms of cellular life She traces the lab culture common to all those stories asking where it came from and what it means to our understanding of life technology and the increasingly blurry boundary between them The technical culture of cells has transformed the meaning of the term biological as life becomes disembodied distributed widely in space and time Once we have a more specific grasp on how altering biology changes what it is to be biological Landecker argues we may be more prepared to answer the social questions that biotechnology is raising

Greater Than the Parts Christopher Lawrence,George Weisz,1998 This book sheds new light on orthodox medicine and medical science in the interwar years It challenges the accepted story that medicine in the twentieth century was subject to increasing reductionism and shows instead that there was a holistic turn in the medical sciences and clinical practice that challenged reductionism and medical specialization
