Synthetic Methods in Drug Discovery David C. Blakemore, Paul M. Doyle, Yvette M. Fobian, 2016 The number of available synthetic methods can be overwhelming In order to create novel motifs and templates which confer new and potentially valuable drug like properties it is important to know which synthetic methodologies will give the best results Similarly which methodologies are used to progress potential drug candidates from leads through the development process What are the current industrial research problems and how can they be resolved in an industrial setting This book highlights key methods that have real impact in drug discovery and facilitate delivery of drug molecules *Synthetic Methods in Drug Discovery* Volume 1 focuses on the hugely important area of transition metal mediated methods used in industry Current methods of importance such as the Suzuki Miyaura coupling Buchwald Hartwig couplings and CH activation are discussed In addition exciting emerging areas such as decarboxylative coupling and the uses of iron and nickel in coupling reactions are also covered This book provides both academic and industrial perspectives on some key reactions giving the reader an excellent overview of the techniques used in modern synthesis Reaction types are conveniently framed in the context of their value to industry and the challenges and limitations of methodologies are discussed with relevant illustrative examples Edited and authored by leading scientists from both academia and industry this book will be a valuable reference for all chemists involved in drug discovery as well as postgraduate students in medicinal chemistry

Drug Repurposing David Cavalla, 2022-02-09 Drug repurposing is the development of existing drugs for new uses given that 9 in 10 drugs that enter drug development are never marketed and therefore represent wasted effort it is an attractive as well as inherently more efficient process Three repurposed drugs can be brought to market for the same cost as one new chemical entity and they can also be identified more quickly an important benefit for patients whose diseases are progressing faster than therapeutic innovation But repurposing also requires a fresh look at configuring pharmaceutical R a

holistic gedanken experiment almost needs to be undertaken at the very start of any repurposing development In addition to new ways of thinking the discovery of repurposing opportunities can take advantage of artificial intelligence techniques to match the perfect new use for an existing drug And while repurposing of medicines has been in the mind of every doctor since Hypocrates modern clinical practice will simply have to adapt to new repurposing techniques in an age where the number of known diseases is increasing much faster than the healthcare dollars available
