Swartz,2014-03-05 What kind of social studies knowledge can stimulate a critical and ethical dialog with the past and present Re Membering History in Student and Teacher Learning answers this question by explaining and illustrating a process of historical recovery that merges Afrocentric theory and principles of culturally informed curricular practice to reconnect multiple knowledge bases and experiences In the case studies presented K 12 practitioners teacher educators preservice teachers and parents use this praxis to produce and then study the use of democratized student texts they step outside of reproducing standard school experiences to engage in conscious inquiry about their shared present as a continuance of a shared past This volume exemplifies not only why instructional materials including most so called multicultural materials obstruct democratized knowledge but also takes the next step to construct and then study how re membered student texts can be used Case study findings reveal improved student outcomes enhanced relationships between teachers and families and teachers and students and a closer connection for children and adults to their heritage

Algebraic Structures in Natural Language Shalom Lappin, Jean-Philippe Bernardy,2022-12-23 Algebraic Structures in Natural Language addresses a central problem in cognitive science concerning the learning procedures through which humans acquire and represent natural language Until recently algebraic systems have dominated the study of natural language in formal and computational linguistics AI and the psychology of language with linguistic knowledge seen as encoded in formal grammars model theories proof theories and other rule driven devices Recent work on deep learning has

produced an increasingly powerful set of general learning mechanisms which do not apply rule based algebraic models of representation The success of deep learning in NLP has led some researchers to question the role of algebraic models in the study of human language acquisition and linguistic representation Psychologists and cognitive scientists have also been exploring explanations of language evolution and language acquisition that rely on probabilistic methods social interaction and information theory rather than on formal models of grammar induction This book addresses the learning procedures through which humans acquire natural language and the way in which they represent its properties It brings together leading researchers from computational linguistics psychology behavioral science and mathematical linguistics to consider the significance of non algebraic methods for the study of natural language The text represents a wide spectrum of views from the claim that algebraic systems are largely irrelevant to the contrary position that non algebraic learning methods are engineering devices for efficiently identifying the patterns that underlying grammars and semantic models generate for natural language input There are interesting and important perspectives that fall at intermediate points between these opposing approaches and they may combine elements of both It will appeal to researchers and advanced students in each of these fields as well as to anyone who wants to learn more about the relationship between computational models and natural language

The Emotional Politics of Social Work and Child Protection Joanne Warner, 2015-01-12 Social work and child protection systems have for several decades been subject to cycles of crisis and reform with each crisis drawing intense media and political scrutiny In this book Joanne Warner argues that to understand the nature of these cycles we have to pay attention to the importance of collective emotions such as anger shame and fear To do so she introduces the concept of emotional politics Using a range of cases from the United Kingdom the United States the Netherlands and New Zealand Warner reveals that collective emotions are central to constructions of risk and blame and that they are generated and reflected by official documents politicians and the media She also suggests strategies for challenging emotional politics including identifying models for a more politically engaged stance for the social work profession

Quantum Structures in Cognitive and Social Science Diederik Aerts, Jan Broekaert, Liane Gabora, Sandro Sozzo, 2016-06-26 Traditional approaches to cognitive psychology correspond with a classical view of logic and probability theory More specifically one typically assumes that cognitive processes of human thought are founded on the Boolean structures of classical logic while the probabilistic aspects of these processes are based on the Kolmogorovian structures of classical probability theory However growing experimental evidence indicates that the models founded on classical structures systematically fail when human decisions are at stake These experimental deviations from classical behavior have been called paradoxes fallacies effects or contradictions depending on the specific situation where they appear But they involve a broad spectrum of cognitive and social science domains ranging from conceptual combination to decision making under uncertainty behavioral economics and linguistics This situation has constituted a serious drawback to the development of various disciplines like cognitive science linguistics

artificial intelligence economic modeling and behavioral finance A different approach to cognitive psychology initiated two decades ago has meanwhile matured into a new domain of research called quantum cognition Its main feature is the use of the mathematical formalism of quantum theory as modeling tool for these cognitive situations where traditional classically based approaches fail Quantum cognition has recently attracted the interest of important journals and editing houses academic and funding institutions popular science and media Specifically within a quantum cognition approach one assumes that human decisions do not necessarily obey the rules of Boolean logic and Kolmogorovian probability and can on the contrary be modeled by the quantum mechanical formalism Different concrete quantum theoretic models have meanwhile been developed that successfully represent the cognitive situations that are classically problematical by explaining observed deviations from classicality in terms of genuine quantum effects such as contextuality emergence interference superposition entanglement and indistinguishability In addition the validity of these quantum models is convincingly confirmed by new experimental tests We also stress that since the use of a quantum theoretic framework is mainly for modeling purposes the identification of quantum structures in cognitive processes does not presuppose without being incompatible with it the existence of microscopic quantum processes in the human brain In this Research Topic we review the major achievements that have been obtained in quantum cognition by providing an accurate picture of the state of the art of this emerging discipline Our overview does not pretend to be either complete or exhaustive But we aim to introduce psychologists and social scientists to this challenging new research area encouraging them at the same time to consider its promising results It is our opinion that if continuous progress in this domain can be realized quantum cognition can constitute an important breakthrough in cognitive psychology and potentially open the way towards a new scientific paradigm in social science

Perceptual Linguistic Salience: Modeling Causes and Consequences Alice Blumenthal-Dramé, Adriana Hanulíková, Bernd Kortmann, 2017-06-05 Recent years have seen an upsurge of interest in the notion of salience in linguistics and related disciplines While in top down salience perceivers endogenously direct their attention to a certain stimulus in the bottom up salience it is the stimulus itself which attracts attention In prototypical cases of bottom up salience the stimulus stands out because it is incongruous with a given ground by virtue of intrinsic physical characteristics But a stimulus may also cause surprise by virtue of deviating from a cognitive ground e g when violating social or probabilistic expectations This has prompted researchers to examine the relationship between expectations and the perceptual salience of linguistic stimuli in new ways This e book features contributions from different scientific frameworks The reader will find commentaries reviews and original research articles on models of sociolinguistic and morphological salience the role of attention affect and predictability and on how salient items are processed categorized and learned Taken together the articles in this volume contribute to our understanding of how the perceptual salience of linguistic forms and variants can be theoretically framed and methodologically operationalized in different areas of linguistic processing
