AIR CRASH INVESTIGATIONS, LOST OVER THE ATLANTIC The Crash of Air France Flight 447 THE FINAL REPORT George Cramoisi, editor, 2012-09-01 On 31 May 2009 the Airbus A330 flight AF 447 took off from Rio de Janeiro Gale o airport bound for Paris Charles de Gaulle At around 2 h 02 the Captain left the cockpit for a short nap At around 2 h 08 at flight level 350 the crew made a course change of 12 degrees to the left to avoid bad weather At 2h 10min 05 likely following the obstruction

of the Pitot probes by ice crystals the speed indications were incorrect and some automatic systems disconnected The aeroplane's flight path was not controlled by the two copilots They were rejoined 1 minute 30 later by the Captain while the aeroplane was in a stall situation that lasted until the impact with the sea at 2 h 14 min 28 s killing all 228 persons on board It took almost two years to recover the wreck of the aircraft from a depth of 4 000 metres The accident resulted from a succession of events such as inconsistency between the measured airspeeds inappropriate control inputs and the crew's failure to diagnose the stall situation

Air Crash Investigations: Running Out of Fuel, How Air Transat 236 Managed to Fly 100 Miles Without Fuel and Land Safely George Cramoisi, 2010-02-04 On August 24 2001 Air Transat Flight 236 an Airbus 330 was on its way from Toronto Canada to Lisbon Portugal with 306 people on board Above the Atlantic Ocean the crew noticed a dangerous fuel imbalance The crew changed the planned route for a landing at the Lajes Airport in the Azores At 06 13 the right engine flamed out At 06 26 the left engine also flamed out However after flying 100 miles without fuel the crew managed to land the aircraft at the Lajes Airport at 06 45 After the landing small fires started in the main gear wheels they were extinguished by the crash rescue response vehicles Only 16 passengers and 2 cabin crew members received injuries The aircraft suffered damage to the fuselage and to the main landing gear The investigation uncovered a large crack in the fuel line of the right engine it was caused by mistakes during an engine change just before the start of the flight

Federal Register, 2014-02 **Air Crash Investigations: Lost Over the Atlantic, the Mysterious Disappearance of Air France Flight 447** George Cramoisi, 2010-05-24 On 31 May 2009 flight AF447 an Airbus A330 200 took off from Rio de Janeiro bound for Paris At 2 h 10 a position message and some maintenance messages were transmitted by the ACARS automatic system After this nothing was heard of from the aircraft Six days later bodies and airplane parts were found by the French and Brazilian navies All 228 passengers and crew members on board are presumed to have perished in the accident A massive search by air and sea craft for the plane's black boxes failed so far

Advanced Approach Light System Behrend, Ferdinand, 2017-08-25 The constant growth in aviation requires the introduction of new technologies in order to meet the demand for increasing capacity Especially the airport often represents the limiting factor Poor visibility conditions and an insufficiently equipped ground infrastructure regarding navigation facilities can lead to restrictions in maintaining the prevailing traffic flow especially during the approaches The conventional instrument landing system consists of numerous technical components which are causing expenses regarding maintenance and operation Smaller airports are often only partially or not at all equipped with the appropriate ground facilities This can bring air traffic to a total halt during certain visibility conditions New satellite based approach procedures offer the possibility to keep up air traffic even during poor visibility conditions regardless of the ground infrastructure required in the past These also offer now a barometric guidance or an augmented satellite signal for the vertical flight guidance component With the use of these approach procedures there is however the possibility of new faults and errors of the vertical flight guidance signal In a

system based on electromagnetic radio waves a fault is angular meaning if the airplane gets nearer to the transmitter on ground the absolute possible failure of the target approach path gets smaller In a satellite based approach on the other hand it is constant during the whole approach The result can be a great deviation from the target approach path even just before reaching the runway threshold Often only after reaching the decision height and the herewith connected visual contact to corresponding ground features these faults can be recognized during poor visibility conditions close to the minima of a precision approach flight The larger the absolute error to the target approach path the more crucial it gets to initiate a missed approach procedure and therefore preventing a drop out of the relevant obstacle clearance limit Research has shown that through the currently present visual characteristics of the approach lighting system the actual position cannot be determined sufficiently regarding the runway threshold and the target approach path in order to estimate the decision height correctly The here presented Advanced Approach Light System is supposed to be an additional visual aid in order to support the cockpit crew in its decisions Therefore it should amount to improve the awareness of the situation regarding constant vertical faults The new navigation lighting system has been integrated into a flight simulator and was tested by licensed airline pilots within two test series with varying visibility conditions and decision heights Next to basic functionality operational usability in existing procedures of practical routines in the cockpit has been evaluated The results of the test series have demonstrated a significant improvement in identifying vertical faults with the support of the Advanced Approach Light System The decision to initiate a missed approach was made immediate and prompt and therefore the airplane stayed within the obstacle clearance limit even in a low decision height In contrast the trial participants without the new system took reluctant and often far too late decisions which lead to a drop out of the obstacle clearance limit The Advanced Approach Lighting System has significantly improved the situation awareness for pilots in command in recognizing vertical faults when reaching the decision height The integration in existing work routines and its operative use happened flawlessly and was highly accepted by the trial participants

Just Culture and the Criminalisation of Air Accidents Simon Daniels, 2024-12-30 Just Culture and the Criminalisation of Air Accidents equips the reader with the tools to understand the meaning of criminalisation in the civil aviation industry It enables them to resolve problems that arise in risk management within the context of their professional employment By examining the priorities of pilots air traffic controllers and prosecutors this book analyses the anatomy of criminalisation in civil aviation and works towards constructing solutions that protect the professionals human rights and the Just Culture concept within the framework of criminal law and practice It covers the duty of an air traffic controller to take the standard of care to guard

against acts or omissions which might cause loss and give rise to a claim in negligence The book illustrates the critical features discussed with numerous case studies from States and jurisdictions around the world The book will benefit airline operators pilots air traffic controllers or managers and aviation business managers

Facing the Unexpected in Flight Jean Pinet, 2015-10-28 Airline pilots often have to face sudden unexpected situations that can become potentially dangerous They are trained to deal with these situations but sometimes the lack of time before the situation deteriorates and the associated stress can compromise their basic cognitive sequence and lead to a serious incident or even an accident This book identifies common denominators in pilots reactions to dangerous unexpected events and highlights behavior common to all in complex stressful situations Facing the Unexpected in Flight Human Limitations and Interaction with Technology attempts to clarify the human characteristics at play in stressful situations with the goal of providing a more solid basis for designing aeronautical operating equipment and shaping future automation The book applies an original cognitive analysis method to highlight actual operational behavior within a quick succession of short mental segments lasting less than one minute in all This rational method of assessing human potential should contribute to a more effective distribution of roles and help to optimize the pilot aircraft interface The current drive towards total automation together with the drone revolution and questions of cost effectiveness within a global economy raises the question of whether there is a need for pilots onboard aircraft So after scientifically dissecting human limitations and advantages in terms of flying an aircraft the book concludes with reflections by the author on the possibility and implications of eliminating pilots from aircraft In this section the author sets aside scientific rigor and provides his sometimes subjective personal opinions on the professional future of airline pilots

The Major Projects Report 2012 Great Britain: National Audit Office,2013-01-10 In respect of its largest defence projects there are early signs that the Ministry of Defence has begun to make realistic trade offs between cost time technical requirements and the amount of equipment to be purchased Nevertheless the continuing variances to cost and time show the MOD needs to do consistently better This report which gives a progress review of the 16 largest defence projects shows that in the last year there has been a total forecast slippage of 139 months and increase in costs of 468 million This means that since the projects were approved costs have increased by 6.6 billion around 12 per cent more than the planned cost and the projects have been delayed by 468 months taking almost a third longer than originally expected It would be unrealistic to expect MOD and industry to identify every risk at the start of technically challenging projects However the continuing problems indicate that MOD has more to learn from historic The MOD is accepting the capability risk and some wider costs resulting from these project delays and is having to make difficult decisions about long term capabilities The MOD has made a significant investment in new and upgraded helicopters to address the shortfall identified in the NAO s 2004 report The MOD has also spent 787 million on air transport and air to air refuelling aircraft to support current operations and address capability gaps such as those caused by the previously reported delays to the A400M transport aircraft However capability gaps remain
